He was more than "the first American," however. He was one of the greatest Americans. The tide of time, which has buried animosities and prejudices, has left every reflecting and just mind free and yet compelled to draw that conclusion. He was great, not in the way that Alexander of Macedon or Napoleon of Corsica was, but in a better way. His was not the greatness of genius, nearly always selfish. His was the greatness of common sense and tenderness. It consisted fundamentally in intellectual and moral humility and in intellectual and moral integrity, which salient characteristics enabled him to furnish to the world a spectacle scarcely, if ever, excelled, of self-subordination to the interests, the welfare, the unity of the Republic, and, more characteristically perhaps, yet of self-surrender to an enlightened public opinion, the growth of which he shared and studied, the tendency of which he cautiously and wisely guided, and the consummation of which into deed he, at the right moment, effected. He never went so fast that the common sense and the common conscience of the common people could not keep measurably apace, nor did he ever go so slowly that these left him stranded on the shore, while they passed beyond him under other and quicker and abler navigators.

LINCOLN GREAT HUMAN INSTRUMENT.

In other words, he was like all the great human instrumentalities of Providence—a part and parcel of the growing form and texture of the time—unconsciously following and consciously directing American public sentiment, as this came naturally or was forced by inevitable circumstance into existence. This enlightened public opinion, for which he had "a decent regard," constituted then, as always, the only real controlling force and sovereign power in a country whose people are free and self-governing.

Horace Greeley once accused him of being an opportunist. So are, and must be, all real statesmen in free countries. They

weigh opportunity and measure its strength, but they also help to create it and then seize the opportunity to effect the desired result. This is sagacity as contradistinguished from "smartness." They are opportunists, but they are more.

Lincoln was in this and some other respects singularly like that other great American, Thomas Jefferson. Both of them were idealists in the closet and statesmen in office. There was no limit to the visions which either had of what Jefferson called "the indefinite perfectibility of human nature," nor to their confidence in the progress and enlightenment of man under rightly constituted popular government founded on an enlightened and educated public opinion. Both were Democrats and both believed in the aristocracy of intelligence as the only aristocracy recognizable by freemen. Many dreams which either had have come true. Many more are yet in the womb of fate, certain later to come forth. Yet neither in office ever attempted to force upon the country any result for which a considerable and probably prevailing public opinion was not ready. They attempted to pluck, when in charge of the orchard, no fruit until the fruit was either ripe or ripening; and, above all, their purpose was not to kill or even harm the tree. Hence both are accused by men of little minds of "inconsistency." It is to be noted, however, that neither ever really "deserted a principle or a friend," as Jefferson's daughter proudly said of her father.

No two men who have figured conspicuously in molding the destinies of the English-speaking race ever equaled these two in their abiding, patient, and loving reliance upon the rectitude of the purposes of the people and in unswerving faith in the wisdom of their ultimate decision. Lincoln never tired of professing himself a disciple of Jefferson. He went so far at one time as to say that the vital spirit—that is, the birth principle—of American institutions was to be found in the Declaration of Independence, and not in the Constitution of the United States. On no fundamentally great question did they ever materially differ—not even about slavery—not even about the relations which should exist between the two races in the event of negro emancipation. Between the two the chief difference was one of personal temperament; Lincoln, of the two, lived very much more within himself. He was, spiritually speaking, a lonesome man—sadly so—but throwing about himself a veil of anecdote and humor—sometimes rough humor—which served as a shield to ward off intrusion. Hidden behind this veil was not only serious but pathetic, and nearly always solitary, thought. Hence that indescribable mixture of humor and pathos which we find in him, as in Shakespeare and Cervantes.

Mr. Jefferson, on the contrary, was frequently witty, but had no sense of humor at all, and seemed to take a sort of delight in letting all the world see every process of his thought as though through a window glass.

MAN IS DIFFERENT.

It is trite now to say that every man in this world is the product of two things—his heredity and his environment. Unlike plants and irrational creatures, however, man is not altogether the product of either or of both. While his environment makes him, he helps to make his environment—can even somewhat change it by conscious purpose. Moreover, while he can not repress nor reverse, he may influence the tendencies of his heredity even.

Lincoln's family we all know about. There was very little stimulating in its influence. It furnished rather a platform to rise from than a standard to live up to.

Likewise his early environment was, to say the least, discouraging; there was little in it to evoke ambition or to encourage, "hoping through hope to reach the stars."

But he rose from the platform; he reached the stars.

Within almost modern big-gun shot distance from where we now stand Jefferson Davis was born.

Both of these men were "border State" men—Kentuckians. Both of them came from pioneer ancestry who had fought for American freedom and had braved the dangers and endured the isolation of the wilderness. It is a curious reflection, though there be not time to indulge in it here and now, as to how far each of these men's future—his political philosophy, the sectional patriotism of each, his leaning to nationality on the one side or to State rights on the other—might have been altered, mayhap reversed, had Jefferson Davis's family moved him into Indiana and then into Illinois and had Abraham Lincoln's family moved him first into Louisiana and then into Mississippi. However interesting that inquiry may be, the reverse occurred. Davis became a very extreme Southerner. Lincoln never became a very extreme Northerner. The men were very much alike, and yet both were alike in possessing the cardinal human virtues—truthfulness, moral and intellectual honesty, courage, loyalty to ideals. There was, too, somewhat of inflexibility about both, though in one case the inflexibility, while knightly, was stern, logical, unyielding, unhumorous, and even proud; while in the other case it was modified by humility and a rich sense of humor, from which flowed that wonderful capacity for "making allowances," that broad knowledge of an opposite's way of looking at things, that sympathetic appreciation of the moods and ways of thinking and the ways of feeling of the untaught and unenriched masses of mankind.

With Davis there were no laughter-inciting "sidelights on himself and others and their relations to one another" to relieve even temporarily the tension of a fixed and absorbing purpose. Lincoln was never without them. By being never without them he made lesser men like Stanton, for example, "very impatient." Davis became the very type of the best plantation life of the extreme South. As a part and parcel of that life he consecrated himself to his section, whose very civilization and social order he thought to be menaced. Lincoln consecrated himself to the Nation. Both endured nobly to the very end, each steadfastly "keeping the faith."

LINCOLN A BORDER MAN.

Lincoln remained all his life a borderer. In his temperament he came very much nearer that of the Southerner than that of the New Englander, or the New Yorker, or Pennsylvanian. No theory of any sort would ever have led him into that gross violation of common sense and common justice which after the war brought about the grotesque though cruel saturnalia of the southern reconstruction governments; nor could any theory, or any war experience, however bitter, have brought him to a hatred for the southern white people, even of the slaveholding class. He lived with none; he died without any.

He was a great nationalist not only in political vision but in this: That he knew and loved the people of both sections. He was perhaps the most thoroughly nationalistic and the least sectionalistic of all our Presidents, not even excepting George Washington, who never forgot that he was "a Virginian and a gentleman." Hence it is peculiarly appropriate that the legal title to Mr. Lincoln's birthplace should rest in the Nation itself.

It may be sadly recorded that while he understood the men of both sections, it is doubtful if any very large percentage of those of either ever understood him until long after he was dead. Jefferson Davis understood him partially; understood fully his utter lack of malice. Witness the superb reply of the chief of the fallen Confederacy when his attention having been called to President Johnson's proclamation containing the insinuation that he (Davis) had been complicite to the assassination of Mr. Lincoln, he replied: "There is one man in the United States, at any rate, who knows that to be a falsehood!—that is the man who wrote it. He knows that I would infinitely rather have Lincoln than to have him in the White House." Davis afterwards said: "Next to the loss of the cause itself, the death of Mr. Lincoln was the greatest calamity that ever befell the South."

Shakespeare, whose writings Mr. Lincoln read and loved so much, helped to mold his thought. The broad and sympathetic charity with which he viewed, and sometimes laughed at, all men and women—the wise and the foolish, the just and the unjust, the learned and the ignorant, the sinners whom Christ came to save and the righteous, who "needed not a physician"—was almost Shakespearean—leaving anger against those who might or might not deserve it to God, who knew—repeating sincerely, as he did in one of his inaugural addresses, "But let us not judge lest we be judged." I think he absorbed from Shakespeare the characteristic breadth in expressing thought which led to this: That so many utterances of his are not confined in their applicability to the time or the place where they were made, but expand in appositeness to many places and many times. Even when arguing a concrete institution like slavery his language was universal rather than particular. His English was terse, forcible, Saxon. His Gettysburg speech is the most eloquent illustration of these qualities—verily multum in parvo. It is by all odds the greatest short speech in the English, or, for aught I know, in any language. To illustrate the breadth of applicability of that wonderful dedication speech, one might paraphrase it with slight omission and no material addition, so as to make Mr. Lincoln himself, who was a great orator—because he was a man of eloquent thought—dedicate to the Nation that he loved so well the home in which he was born so humbly.

DIFFICULT TO DEDICATE.

Would there, for example, be anything inapposite for the purpose of this occasion in the use of these words: Seven score "years ago our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition

that all men are created equal. Now we are engaged in * * * testing whether that Nation, or any nation so conceived and so dedicated, can long endure. * * * We have come to dedicate" to the Nation the birthplace of him who "gave" his life "that that Nation might live."

"But in a larger sense, we can not dedicate, we can not consecrate, we can not hallow, this ground." The brave and patient man who was born here, by his life and death has "consecrated it far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget" * * * what he did. "It is for us, the living, rather, to be dedicated to the great task remaining before us—that from" the memory of this "honored dead we take increased devotion to that cause for which" he "gave the last full measure of devotion; that we here highly resolve that" he "shall not have" lived nor "died in vain; that this Nation under God shall have" (daily) "a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth."

Suppose that in analyzing the character and results to the two sections of the late war between the States I, the son of a Confederate soldier, were to use this language which is to be found in Mr. Lincoln's second inaugural address, would it not be a fitting comment for this day and place? "Each looked for an easier triumph and a result less fundamental and astounding. Both read the same Bible, and prayed to the same God, and each invoked His aid against the other. * * * The prayers of both could not be answered—that of neither has been answered fully. The Almighty had His own purposes."

Again, what a fine exhortation to renewed love between the reunited sections of these once disunited States would not this language be even now. "With malice toward none, with charity for all, with firmness in the right as God gives" each "to see the right, let us strive on to finish the work we are in" (and having already bound up the Nation's wounds) "do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

My fellow citizens! We call one another fellow citizens now from Maine to Florida, and even "where Oregon rolls." We are fellow citizens now, and this "indissoluble Union of indestructible States" which all of us so intensely love has been reestablished only because, as Lincoln said, "God had purposes of His own." "The stars in their courses fought" against the South as they fought of old "against Sisera."

Yet again, pursuing my illustration, all realize the present applicability, with slight verbal alterations, of what Mr. Lincoln said in his first inaugural address: "Physically speaking, we can not separate. We can not remove our separate sections from each other, nor build an impassable wall between them. A husband and wife may be divorced and go out of the presence and beyond the reach of each other, but the different parts of our country can not do this."

"We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battle field and patriot grave to every living heart and hearthstone all over this broad land," once more "swell the chorus of the Union," as they forever shall "when * * * touched, as surely they will be, by the better angels of our nature."

"The mystic chords of memory!" What a world of potency there is in a phrase! These "mystic chords of memory" are the richest heritage and possession of any great people. The music which is made upon them is sad, but it is embracing; it "holds the heart up higher." It is music in memoriam of "the generous and patriotic spirits" of a country; of "its buried warlike and its wise." It is always well, then, by monument and memorial, to keep all worthy memories fresh in the minds of the people, thus inducing each generation to rethink, refeel, and relive that which was noblest and worthiest in the generations preceding it. Thus we shall have the Nation make of its foregone generations "stepping-stones of its dead self" wherefrom to rise "to higher things."

THE LINCOLN FARM BECOMES THE PROPERTY OF THE NATION—AN ADDRESS BY THE CHAIRMAN OF THE EXECUTIVE COMMITTEE OF THE LINCOLN FARM ASSOCIATION.

Mr. President and honored guests, on behalf of the association whose privilege it has been during the past 12 years to prepare the way for this ceremony, it is my duty to say a few words in relinquishing to the custody of the United States this farm and this cabin, whose preservation has been our especial care.

To-day, for the men who from all walks of life banded themselves into the Lincoln Farm Association to preserve this birthplace, there is a fitting end to their 12 years' labor of love. To-day the Lincoln farm becomes the property of the Nation.

The honor falls to me as chairman of the executive committee, on the occasion of the transfer to the Secretary of War of the deed of gift of the Lincoln farm and the Lincoln cabin and the memorial in which that cabin is to be housed in perpetuity, and of the $50,000 trust fund for its maintenance, to express my thanks to the President of the United States for setting his great affairs aside to lend us the inspiration of his presence here.

I am under particular obligation to the president of the association, the Hon. Joseph W. Folk, who has presided with distinction over the laying of the corner stone by President Roosevelt in 1909, the dedication of the memorial by President Taft in 1911, and the acceptance for the United States by President Wilson to-day.

To Richard Lloyd Jones, who was not only secretary of the association but with whom originated the movement to preserve Lincoln's birthplace, and to Clarence H. Mackay, our indefatigable treasurer; to the late Augustus St. Gaudens, the late Samuel L. Clemens, the Hon. Joseph H. Choate, the Hon. Charles Evans Hughes, and other fellow directors, the executive committee is deeply indebted, and to Thomas Hastings, Guy Lowell, Jules Guerin, Maxfield Parrish, and especially to the architect, John Russell Pope, who all contributed to make more beautiful this birthplace shrine that Mark Twain so well described as "the little model farm that raised a man."

Simple as this ceremony itself may be, it marks this town of Hodgenville to-day, and the few acres of this little homestead, as the spot in all Kentucky richest in memories, and for one proud moment the Capitol of the United States.

On this rocky farm, a little over a hundred years ago, when Kentucky was the home of the woodsman and the pioneer, when the scant soil yielded reluctant harvest to the settler, Thomas Lincoln, one-time supervisor of county roads, and his wife, Nancy Hanks, came from Elizabethtown and built out of rough logs a cabin. In that cabin, on the 12th day of February, 1809, was born their son, Abraham Lincoln.

No surroundings more humble, no winter landscape more austere, with one high exception, ever marked the coming among men of a figure which was so profoundly to affect the destinies and awaken the imagination of a people. It was as if fate had selected this place for a trial of democracy, or as if God had ordained this little cabin to be the birthplace of the man who was to save for His great purposes the Nation soon to be tried by fire. And that shambling, tragic figure, product of this soil, that rail splitter, who was destined to guide his country through her hours of darkness, and when his worn spirit seemed about to reap the reward of a Nation's gratitude, was called at the very end to pay his country "the last full tribute of devotion," Abraham Lincoln leaves here to our keeping the record alike of his homely beginnings and his enduring fame.

His own words, spoken at Gettysburg, better than any other, fit this memorial within which is enshrined the log cabin that gave him birth: "But, in a larger sense, we can not dedicate, we can not consecrate, we can not hallow, this ground. * * * It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation under God shall have a new birth of freedom and that government of the people, by the people, for the people shall not perish from the earth."

I count it a happy augury for our country at this time, when the world is riven asunder by a conflict even more terrible, that the pilot of our ship of state, the President of the United States, who is a Virginian and a Democrat, should come here to-day to do reverence to the memory of Abraham Lincoln. Nor can we fail to recognize the high motive which actuated the President when the calls of party were so urgent to set them all aside for the fulfillment of this nonpartisan mission.

Lincoln, we may be sure, had seen enough of the seamy side of the splendid tapestry called war to look behind its glamour. He had heard from the White House in 1861 the fife, the drum, the trumpet, and the tramp of the young men as they went singing out to war; but he saw these same young men in the hospitals of 1864, shattered, wounded, dying. His tender heart was bruised by suffering, but his iron will went forward to his country's goal.

The same stern resolution drove Lincoln forward from Bull Run to Gettysburg that carried Washington forward from Valley Forge to Yorktown, and not all the counsels of expediency or weakness warped the common sense of those two great Americans to whom we owe our independence and our union.

May this memorial serve none but noble purposes, purposes that place pride of section, or pride of party, below love of

country. May it teach us Americans of a later generation that this Nation, built by a free people, owns no barriers of race or creed or section to divide it from itself; that on this soil is planted the seed of a self-reliant patriotism that can endure hardships, practice self-denial, and answer "Here" to the roll call of our forefathers.

May this memorial preserve—and not in marble only—the words of the man whose memory it cherishes: "With malice toward none, with charity for all." May it also, lest we in our day of ease forget them, preserve those sterner words spoken on the battle field of Gettysburg and graven deep into the soul of Abraham Lincoln: "That we here highly resolve that these dead shall not have died in vain."

—

ADDRESS OF HON. NEWTON D. BAKER, SECRETARY OF WAR, AT HODGENVILLE KY., SEPTEMBER 4, 1916.

In the office of the Secretary of War there is a bronze bust of Edwin M. Stanton. The figure is a little softened by the drapery which the artist has put over the shoulders in lieu of the angular coat which the Secretary used to wear. But its face is as hard and unrelenting as was that of the original; and when I am called upon to say, "No," under peculiarly distressing and unpleasant circumstances, I glance at that bust and find that I have but to reflect its expression. Indeed, in moments of perplexity, I have sometimes been startled to find that stern face all but asking, "Well, what are you going to do about it?" and withholding its approval from any state of mind on my part which does not follow with relentless certainty the central thought of the main task.

This great predecessor was the ironside of Lincoln as a war President, and it is probable that no other of the President's aids was either so unpopular or so indispensable. When a democracy is called upon to engage in a war and to lay aside its equalities and individualities for the common good, there must be some cliff against which protest can break itself in vain. The people, accustomed to the liberties possible in times of peace and untrained in the surrender of those liberties in the hour of trial, must somewhere run up against an unyielding will, and I think it will always be agreed by common consent that Edwin M. Stanton was an incompressible personality. There apparently was no point about him, from crown to toe, where the steadiest pressure or the most violent impact could make the least impression. Now, so far as the War Department is concerned, Lincoln's administration was Stanton. One can find scattered through the vast Lincoln literature which has grown up since the war a story here and there of the President circumventing the inflexibility of the Secretary of War; but those stories are not numerous, and the tradition of the War Department is that Lincoln added to all of his other great qualities this: That humane, gentle, forgiving, wise, as he was, he still sustained the staff of authority in the Military Establishment, realizing that however harsh and uncompromising Stanton might be, he was yet the embodiment of a single passion—the task of saving the Union—and that before the fury of his passion for that great object every inefficiency, every corruption, every interfering friendship or emotion was made to give way.

So much for the relations between the War Department and Lincoln, but the real purpose of my presence is to receive on behalf of the Nation this property and to take it into the physical custody and care of the War Department, as trustee and guardian for future generations. It would be enough were I to express on behalf of mankind a sense of fitness that this birthplace should become a national possession, and saved that men for all time may see the place where Abraham Lincoln was born. The delight of every cultured mind is to see the places and feel the local inspirations which have made poets and heroes in the world. We travel across many seas for the privilege of standing in the Acropolis, feeling that Pericles is nearer to us there, or to the Forum in Rome, feeling that the very stones which heard the eloquence of Cicero have preserved something of it which they give back after all the centuries. The mute soul, which can utter no harmonies of its own, is all but moved to song when it stands in Stratford and watches the gentle flow of Avon, or wanders in the Vale of Grasmere, where Wordsworth lived and grew and sang. How then can it be otherwise than that this place shall give forth inspiration of the noble sort, if here began the most distinctively and significantly American life out of all the millions who have lived in America. The very humbleness of this birthplace teaches the first of the great Lincoln lessons, namely, that genius is indigenous to our soil. Choice stocks which had flowered in the Old World bore transformed and beautiful flowers here, but Lincoln was the first transcendent genius compounded only out of the native elements of our America. The college of heralds, be they never so busy, would find no ancestral quarterings for him. Whatever of strength and genius he had came through roots wholly embedded in American clay. Nor had he even the modifying advantages of a classical culture ingrafted on to the native stock. He was just an American, born on the frontier in poverty, raised in homespun, and yet, in a crisis, one of the great figures of all time, and the circumstances under which he demonstrated his genius are extraordinary. He was some 50 years old when he became President of the United States, not very well known, except as the author of some startling speeches and the accidental exponent of a rising political moral. As a lawyer, no one named him with Marshall or Taney; as an orator, he was not mentioned with Webster or Clay. Neither he nor his party associates had any particular experience in the business of government.

They were untried hands, an aggregation of outs, brought together and brought in upon a new political issue, and faced, even before they were inducted into office, with the most difficult and perplexing questions ever faced by a President of the United States. For on the 4th of March, when Lincoln was inaugurated, but half of the country acknowledged him as President, and in that half there were elements dissenting from his political views, aggregating but little short of a majority of all the people. He was fresh from a campaign of lampoon and pasquinade. His nomination to office had been because he was available, and that availability consisted in having no such past as made him enemies. If he had the respect of the majority of the loyal people in the Union, it was as much as he had. Their love he was to win, their veneration he was to have; but at the assumption of his task it was simply a man and a party, with the extraordinary advantages against him rather than for him.

The times and the movements of events were such as to make very many people hot with impatience for the adoption of a definite policy. The country was full of people who knew just what to do and how to do it, and in the confusion of the times each strident voice became for the moment a prophet, and there were many strident voices raised against Lincoln, who seemed, as James Russell Lowell finely said, to have "made time his prime minister." He seemed incapable of hurry, much less haste, and, with deliberation almost approaching slowness, he evolved rather than adopted step by step a policy adapted here and there to the issue of events until gradually the people of the Union saw, and then the world saw, that here was a man whose nature was so simple that they had wholly failed to understand him. The intricacies of events had seemed to demand complicated machinery in the man who was to control, and there had been great disappointment at the simplicity of his mental apparatus. And yet it was just the sort of mental apparatus and the only sort which could have solved the problem, and that problem, shortly stated, was, first, to choose the issue. If Lincoln had made the abolition of slavery the issue of the war, the North would not have followed, not because slavery was desired, but because the sentiment of the North was too confused on that subject. Too many people would have adopted one or another reason for dissent to join hands, with the concentration of national resources necessary, to accomplish the end. The salvation of the Union, however, was an issue which could not fail, whether men believed in slavery or did not believe in it, whether they liked Lincoln or whether they did not like him, whether they were offended by the harshness of Stanton or impatient at the uncertainties of Congress, made no difference in the ultimate question of their love for the Union, and in that question lay the center of Lincolns policies. The next step was to press the issue, thus wisely and finally chosen, home, to push aside every other issue, no matter how importunate, to refuse to be deflected in his allegiance, and gradually to make the people see that they might cherish all the divisions they choose on every other subject or policy, so long as they cooperated toward that primary and all-important thing.

Our foreign complications were embarrassing and dangerous. The behavior of England, in its hasty recognition of the belligerency of the South, in the comments of its publications and its public men, was such as has rarely been brooked by a nation strong enough to resent it. Lincoln's answer was to let time take care of England, and right her misconception of us and our cause, without allowing even just irritation to divert us into imperiling acts, and so completely was he the master of the Union that the country accepted his policy on this subject, and so enabled him to bring the Union triumphant out of the war. It is futile to ask how Lincoln did this, and yet it is possible to give a more or less obvious explanation of it. He was of the people. When he asked himself, "How do I feel about this or that matter?" the answer always was expressive of the common feeling. He had no class prejudice, for he belonged to no class. He had no blinding interests nor ancestral limitations. He was

just a part of the great common life of America, lifted up for the moment to be the expression point of its impulses. At the beginning of his administration the so-called wise and the so-called literary imagined themselves to understand the situation very much better than poor Mr. Lincoln; but there never was a moment from the time of his inauguration when, in spite of the feelings of his generals, the apparent collapse of campaigns, dissensions at home, difficulties abroad, he would not have been reelected, because he was the people of the United States; he understood their simplicity, because he was simple, and they trusted and followed him because he was the embodiment of themselves.

He sprang, then, from the soil, and I like to think the stream of influence which arose here and had the Niagara of its power in Lincoln's four years from 1861 to 1865 continues to flow on, more tranquilly, it is true, but in ever broadening circles. I like to think that in all future times men, young and old alike, will come to this place to feel the inspiration of his patriotism, and that the preservation of this farm and cabin and the erection of this beautiful memorial will make permanent the possibilities of this inspiring story for the good of mankind everywhere.

In the name of the United States, therefore, and by direction of the President, pursuant to an act of Congress for that purpose enacted, and with an expression of grateful appreciation from the Nation to Mr. Collier and his associates who have made this permanent memorial possible, I accept from the Lincoln Farm Association the Lincoln farm and the endowment which accompanies it.

---

ADDRESS BY WOODROW WILSON, PRESIDENT OF THE UNITED STATES, ON THE OCCASION OF THE ACCEPTANCE BY THE WAR DEPARTMENT OF A DEED OF GIFT TO THE NATION BY THE LINCOLN FARM ASSOCIATION OF THE LINCOLN BIRTHPLACE FARM AT HODGENVILLE, KY.—HERE, OVER THE LOG CABIN WHERE ABRAHAM LINCOLN WAS BORN, DESTINED TO PRESERVE THE NATION AND TO FREE THE SLAVE, A GRATEFUL PEOPLE HAVE DEDICATED THIS MEMORIAL TO UNITY, PEACE, AND BROTHERHOOD AMONG THESE STATES.

No more significant memorial could have been presented to the Nation than this. It expresses so much of what is singular and noteworthy in the history of the country; it suggests so many of the things that we prize most highly in our life and in our system of government. How eloquent this little house within this shrine is of the vigor of democracy! There is nowhere in the land any home so remote, so humble, that it may not contain the power of mind and heart and conscience to which nations yield and history submits its processes. Nature pays no tribute to aristocracy, subscribes to no creed of caste, renders fealty to no monarch or master of any name or kind. Genius is no snob. It does not run after titles or seek by preference the high circles of society. It affects humble company as well as great. It pays no special tribute to universities or learned societies or conventional standards of greatness, but serenely chooses its own comrades, its own haunts, its own cradle even, and its own life of adventure and of training. Here is proof of it. This little hut was the cradle of one of the great sons of men, a man of singular, delightful, vital genius who presently emerged upon the great stage of the Nation's history, gaunt, shy, ungainly, but dominant and majestic, a natural ruler of men, himself inevitably the central figure of the great plot. No man can explain this, but every man can see how it demonstrates the vigor of democracy, where every door is open, in every hamlet and countryside, in city and wilderness alike, for the ruler to emerge when he will and claim his leadership in the free life. Such are the authentic proofs of the validity and vitality of democracy.

Here, no less, hides the mystery of democracy. Who shall guess this secret of nature and providence and a free polity? Whatever the vigor and vitality of the stock from which he sprang, its mere vigor and soundness do not explain where this man got his great heart that seemed to comprehend all mankind in its catholic and benignant sympathy, the mind that sat enthroned behind those brooding, melancholy eyes, whose vision swept many an horizon which those about him dreamed not of—that mind that comprehended what it had never seen, and understood the language of affairs with the ready ease of one to the manner born—or that nature which seemed in its varied richness to be the familiar of men of every way of life. This is the sacred mystery of democracy, that its richest fruits spring up out of soils which no man has prepared and in circumstances amidst which they are the least expected. This is a place alike of mystery and of reassurance.

It is likely that in a society ordered otherwise than our own Lincoln could not have found himself or the path of fame and power upon which he walked serenely to his death. In this place it is right that we should remind ourselves of the solid and striking facts upon which our faith in democracy is founded. Many another man besides Lincoln has served the Nation in its highest places of counsel and of action whose origins were as humble as his. Though the greatest example of the universal energy, richness, stimulation, and force of democracy, he is only one example among many. The permeating and all-pervasive virtue of the freedom which challenges us in America to make the most of every gift and power we possess, every page of our history serves to emphasize and illustrate. Standing here in this place, it seems almost the whole of the stirring story.

Here Lincoln had his beginnings. Here the end and consummation of that great life seem remote and a bit incredible. And yet there was no break anywhere between beginning and end, no lack of natural sequence anywhere. Nothing really incredible happened. Lincoln was unaffectedly as much at home in the White House as he was here. Do you share with me the feeling, I wonder, that he was permanently at home nowhere? It seems to me that in the case of a man—I would rather say of a spirit—like Lincoln the question where he was is of little significance, that it is always what he was that really arrests our thought and takes hold of our imagination. It is the spirit always that is sovereign. Lincoln, like the rest of us, was put through the discipline of the world—a very rough and exacting discipline for him, an indispensable discipline for every man who would know what he is about in the midst of the world's affairs; but his spirit got only its schooling there. It did not derive its character or its vision from the experiences which brought it to its full revelation. The test of every American must always be, not where he is, but what he is. That, also, is of the essence of democracy, and is the moral of which this place is most gravely expressive.

We would like to think of men like Lincoln and Washington as typical Americans, but no man can be typical who is so unusual as these great men were. It was typical of American life that it should produce such men with supreme indifference as to the manner in which it produced them, and as readily here in this hut as amidst the little circle of cultivated gentlemen to whom Virginia owed so much in leadership and example. And Lincoln and Washington were typical Americans in the use they made of their genius. But there will be few such men at best, and we will not look into the mystery of how and why they come. We will only keep the door open for them always, and a hearty welcome—after we have recognized them.

I have read many biographies of Lincoln; I have sought out with the greatest interest the many intimate stories that are told of him, the narratives of near-by friends, the sketches at close quarters, in which those who had the privilege of being associated with him have tried to depict for us the very man himself "in his habit as he lived"; but I have nowhere found a real intimate of Lincoln's. I nowhere get the impression in any narrative or reminiscence that the writer had, in fact, penetrated to the heart of his mystery, or that any man could penetrate to the heart of it. That brooding spirit had no real familiars. I get the impression that it never spoke out in complete self-revelation and that it could not reveal itself completely to anyone. It was a very lonely spirit that looked out from underneath those shaggy brows and comprehended men without fully communicating with them, as if, in spite of all its genial efforts at comradeship, it dwelt apart, saw its visions of duty where no man looked on. There is a very holy and very terrible isolation for the conscience of every man who seeks to read the destiny in affairs for others as well as for himself, for a nation as well as for individuals. That privacy no man can intrude upon. That lonely search of the spirit for the right perhaps no man can assist. This strange child of the cabin kept company with invisible things, was born into no intimacy but that of its own silently assembling and deploying thoughts.

I have come here to-day, not to utter a eulogy on Lincoln—he stands in need of none—but to endeavor to interpret the meaning of this gift to the Nation of the place of his birth and origin. Is not this an altar upon which we may forever keep alive the vestal fire of democracy as upon a shrine at which some of the deepest and most sacred hopes of mankind may from age to age be rekindled? For these hopes must constantly be rekindled, and only those who live can rekindle them. The only stuff that can retain the life-giving heat is the stuff of living hearts. And the hopes of mankind can not be kept alive by words merely, by constitutions and doctrines of rights and codes of liberty. The object of democracy is to transmute these into the life and action of society, the self-denial and self-sacrifice of heroic men and women willing to make their lives an embodiment of right and service and enlightened purposes. The commands of democracy are as imperative as its privileges and

opportunities are wide and generous. Its compulsion is upon us. It will be great and lift a great light for the guidance of the nations only if we are great and carry that light high for the guidance of our own feet. We are not worthy to stand here unless we ourselves be in deed and in truth real democrats and servants of mankind, ready to give our very lives for the freedom and justice and spiritual exaltation of the great Nation which shelters and nurtures us.

BLESSING DELIVERED BY RIGHT REV. THOMAS J. SHAHAN, RECTOR OF CATHOLIC UNIVERSITY, WASHINGTON, D. C., AT THE PRESENTATION OF THE LINCOLN FARM TO THE UNITED STATES GOVERNMENT, HODGENVILLE, KY., SEPTEMBER 4, 1916.

Bless, we beseech Thee, O God of our Fathers, this majestic memorial, which so many greatful hearts consecrate this day to the eternal memory of our New World's greatest captain, whose simple faith in right and duty, whose inspired wisdom and native virtue, saved for all posterity our glorious Union of States and turned a long night of storm into a herald of peace, progress, and prosperity.

Pour forth Thy blessings on this sovereign State of Kentucky, one of the first carved from the primeval wilderness, from the beginning richly illustrative of every rugged American virtue, and pioneer in all the paths which so swiftly led our American humanity from the Atlantic to the Pacific.

Let Thy saving graces, O God of Nations, descend abundantly on the American Nation that it may ever remain what its founders made it and Abraham Lincoln left it, the home of plain and equal citizens, a land of equal rights and opportunities, of freedom without license, of real and accessible justice without unearned distinction or inherited privilege.

Finally, O Lord of infinite mercies, have ever in Thy holy keeping the chosen head of this mighty Nation, Thy newest people gathered providentially from many races and climes and visibly coalescing into a new humanity all-powerful for works of truth and justice, of equity and charity. Confirm in him, O Lord, and through him to every citizen our immemorial patriotism, our devotion to the common weal, above all our faith in the high public ideals of the American people, to the end that the glorious day-star of true liberty, once risen above the world, may not go down in hopeless night and mankind set again its feet in the old way of wrong, bloodshed, and revolution without end. Amen.

## Mexico.

## EXTENSION OF REMARKS
OF
## HON. JAMES R. MANN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES.

*Friday, September 8, 1916.*

Mr. MANN. Mr. Speaker, Harper & Bros. published a book entitled "A Diplomat's Wife in Mexico," by Edith O'Shaughnessy, the wife of Nelson O'Shaughnessy, who was in charge of the United States Embassy at Mexico City for a time. In this book Mrs. O'Shaughnessy has published letters written by her to her mother, covering the period between October 8, 1913, and the breaking off of diplomatic relations between this country and Mexico on April 23, 1914. These letters were personal, confidential letters, but quotations from them throw a bright light on the blundering stupidity of the Wilson administration in dealing with Mexico.

In the advertisements of this book Harper & Bros. say:

Here for the first time—written from the inside—is the truth of what went on behind the scenes before the breaking off of relations between the United States and Mexico. What Americans in Mexico City feared; a country in revolution; what diplomats thought of the United States policy; gossip of drawing-rooms and accounts of personal relations with statesmen, soldiers, and sailors, with Huerta, Lind, Admiral Fletcher, Sir Lionel Carden, and others, in hours when a diplomatic slip might mean war—all these make the book, written at the time the events took place by the wife of the American chargé d'affaires, a contribution to American history, a book to arouse much discussion.

I present to the House a few extracts from these published letters, calling attention to the fact that the letter "N," frequently used in the letters, refers to Mr. O'Shaughnessy, the husband of the writer:

NOVEMBER 11, 1913.

Something that developed in a conversation with Mr. Lind has been making me a bit thoughtful and more than a little uneasy. He has the idea, perhaps the plan, of facilitating the rebel advance by raising the embargo, and I am afraid he will be recommending it to Washington. We had been sitting, talking, after dinner, shivering in the big room over a diminutive electric stove, when he first tentatively suggested such action. I exclaimed: "Oh, Mr. Lind, you can't mean that! It would be opening a Pandora box of troubles here." Seeing how aghast I was, he changed the subject. But I can not get it out of my head. The Mexican book is rolled out like a scroll before him; can it be that he is not going to read? (Pages 44 and 45.)

SATURDAY, NOVEMBER 15, 1913.

N. came in last night at half past 12, after a three hours' conference with Aldape. He is to see him again at 10 this morning. They say that the presence of Mr. Lind gives publicity to every step, that their national dignity is constantly imperiled, and that it is impossible to negotiate under such conditions. Aldape also said that Huerta flies into such a rage whenever Lind's name is mentioned that conversation becomes impossible. (Page 54.)

[Later.]

Though nothing was further from his purpose, Mr. Lind has absolutely knocked any possible negotiations on the head by the noise and publicity of his arrival in the city of Montezuma and Huerta. The Latin American may know that you know his affairs, and know that you know he knows you know; but he does not want and will not stand publicity. (Page 55.)

NOVEMBER 28, 1913.

An exciting day. The long-looked for "decisive" word came from Washington this morning, to be communicated this evening to every embassy and legation in Europe. By to-night all the foreign representatives here and the press will be informed. It states that we will not recede one step from our position; that Huerta and all his supporters must go; that we will isolate him, starve him out financially, morally, and physically, that revolution and assassination may come to an end in Latin America; that we will protect our interests and the interests of all foreigners; and that peace must be made in Mexico, or that we will make it ourselves. It is the argumentum ad hominum certainly, and we can only wait to see what acrobatic feats to avoid the blow will be performed by Huerta. The language is unmistakable, and could only be used because the military force necessary is behind it and ready. (Page 66.)

DECEMBER 29, 1913—EVENING.

Mr. Lind is hurrying aboard the U. S. S. *Chester* to meet the President at Pass Christian. Strong Carranzista though Mr. Lind is proving himself, I don't think the President will be led into the risky policy of recognizing this undeveloped but certainly not very promising quantity. We can put in any sort of government in Mexico, but can we keep one in? We encouraged the powers of dissolution around Diaz, recognizing and aiding Madero. The world knows the result. History always repeats itself here, and the writing on the wall is always in blood. After Mr. Lind's months of inaction it must seem good to be plowing the high seas en route to the weighty conference. He said he would have returned to the States some time ago but for the "very satisfactory" progress of the rebels. He was especially "bucked up" when Villa announced his intention of eating his New Year's dinner at the Jockey Club. (Page 119.)

JANUARY 9, 1914.

Mr. Lind continues to think that the raising of the embargo on arms and ammunition in the north is the easiest solution of the problem, but I am terrified at such an issue. The last state of Mexico would be worse than the first. It might settle the Huerta dictatorship, but, alas, not the Mexican situation. (Page 135.)

JANUARY 14, 1914.

While not convinced of the necessity or even advisability of formal recognition, N. does realize that everything for Mexico and the United States could have been accomplished by diplomacy in the early stages of Huerta's incumbency. Now the bullying and collusive and secret arrangements with his enemies, the revolutionaries, to overthrow him must eventually succeed, and in his fall we fear Huerta will take down with him the entire fabric of state. How often he has said, "I don't ask your help, but don't help my enemies." (Page 149.)

JANUARY 27, 1914—EVENING.

A quiet day, but we are distressed beyond words at the renewed reports of a lifting of the embargo on arms and ammunition for the rebels. I feel as if I couldn't stand it, and N. even felt that he ought to resign if it happens the ship of state is going so inevitably on the rocks. He will make some sort of protest to Washington against the advisability of this move. Villa's cry is, "On to Mexico!" and he may get there, or, rather, here—if we decide to carry him. (Page 165.)

FEBRUARY 1, 1914—10.30 P. M.

To-night has come the long-feared cable from Washington stating the President intends to raise the embargo on arms and ammunition. The note was for Nelson's special information, not for delivery to the foreign office yet, but the hour will come when he will have to gird himself to do the deed. It has been sent to every chancellery in Europe, where it will raise a storm, to blow hard or not, according to the amount of material investments in Mexico. We scarcely know what to think; we are dazed and aghast. I am glad that a few hours at least must elapse before the facts will get out. I shall hardly dare to venture forth unveiled. Courteous as the Mexicans have been to Nelson and myself, some day, in face of the terrible catastrophes we have brought upon them, their patience must fail. This act will not establish the rebels in Mexico City or anywhere else, but will indefinitely prolong this terrible civil war and swell the tide of the blood of men and women, "and the children—or, my brothers!" (Pages 174 and 175.)

MARCH 9, 1914.

I have just been reading an article by Mr. Creelman on Lind. He has caught the spirit of Vera Cruz and describes exactly Mr. Lind and his ambiante there. He speaks of him as "Mr. Wilson's cloistered agent." "In a small, dark room, with a red tiled floor, opening on a

shabby Mexican courtyard," he adds, "in the rear of the American consulate in Vera Cruz, sits John Lind, the personal representative of the President of the United States, as he has sat for seven months, smilingly watching and waiting, while Mexico and her 15,000,000 men, women, and children have moved to ruin." It makes me "creepy," it is so true! (Page 217.)

APRIL 18, 1914—6.30 P. M.

It makes me sick with dread to think of the probable fate of Americans in the desert spaces and the mountain fastnesses of Mexico. Some one has blundered, somewhere, somehow, that we should come in to give the coup de grace to this distracted nation, who yet clings, and rightly, to those tattered shreds of sovereignty we have left her. The foreign powers think we are playing the most cold-blooded, most cruel game of "grab" in all history. (Page 276.)

## The Adamson Bill.

### EXTENSION OF REMARKS
OF
### HON. FREDERICK W. DALLINGER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. DALLINGER. Mr. Speaker, from the beginning of my political career I have always been a sincere friend of organized labor. During my six years' service as a member of the Massachusetts Legislature I both voted for and advocated many important measures in the interest of the wage earners of my own State. Among these measures may be mentioned the following:

Fifty-four hour bill for women and minors. (House journal, 1894, p. 1371.)

Eight-hour bill for State, county, and city employees. (House journal, 1895, p. 513.)

Bill requiring labeling of prison-made goods. (House journal, 1895, p. 511.)

Bill to provide for the safety of railroad employees. (House journal, 1895, p. 346.)

Bill prohibiting overtime employment of women and minors. (Senate journal, 1896, p. 618.)

Bill prohibiting deductions in wages of women and minors. (Senate journal, 1898, p. 739.)

Fifty-eight hour bill for women and minors. (Senate journal, 1898, p. 864.)

Bill to extend the law relative to the weekly payment of wages. (Senate journal, 1899, p. 484.)

Bill to exempt trade-unions from insurance laws. (Senate journal, 1899, p. 891.)

Eight-hour bill for city and town employees. (Senate journal, 1899, pp. 601-603.)

Bill authorizing cities and towns to pension firemen. (Senate journal, 1898, pp. 419, 441, 462.)

At the close of my service in the State legislature I received the thanks of the labor leaders of the State for my efforts, both in the house and senate, in their behalf.

Moreover, since I have been a member of this body I have supported every fair and reasonable measure for the welfare of the Government employees in every branch of the Federal service. I have voted for every bill or amendment providing for an increase of compensation for the employees of the National Government. It was my privilege to make two attempts on the floor of this House to amend the Keating child-labor bill so as to render it easily enforceable without subjecting it to the danger of being declared unconstitutional by the Supreme Court. It was my privilege also to speak in favor of the workingmen's compensation act, which was passed by the present Congress, and to urge the adoption of a pension system for Government employees.

On the other hand, I was unable to give my support to the Tavenner bill prohibiting all efficiency methods in Government arsenals in the form in which it finally passed the House, although I should have gladly voted for it if the amendment which I offered for a referendum to the Government employees concerned had been adopted. In my opinion that bill as it finally passed will make it more difficult than ever to secure the utilization of our Government plants to their full capacity, and will, because of the unwise repudiation of the principle of the referendum for which organized labor has always stood, be detrimental to the real interests of the Government employees.

It is because I believe that the bill now before the House is contrary to the fundamental policy of American trade-unionism, that it will not accomplish the purpose for which it is alleged to be offered, and because in the long run it will prove prejudicial to the best interests of organized labor that although a sincere believer in the principle of the eight-hour day I can not conscientiously give it my support.

It has always been the fixed policy of those in charge of the interests of organized labor, both in the States and in the Nation, not to seek to regulate by legislation the hours of labor and the compensation of male employees except in the case of employees of the Government itself. The bill now under discussion involves a radical and unnecessary departure from that well-established principle. It seeks ostensibly to fix the hours of labor but really to increase the compensation of a special class of the employees of the steam railways of the United States. This special class of employees, representing only 20 per cent of all the steam railway employees of the country, is already the highest paid class of employees of any of our public-service corporations. An amendment offered by the gentleman from Florida [Mr. CLARK] extending the provisions of the bill to the other 1,600,000 employees of our railroads, including all of the poorly paid employees engaged in the hardest kind of manual labor, which was supported by the solid Republican membership of this House, has been voted down. The argument of the gentleman from Georgia [Mr. ADAMSON] that the men who actually operate the trains are the only employees concerned with the safety of the traveling public is an argument not supported by the facts. The safety of the public is just as dependent upon the faithful performance of duty by the trackmen, switchmen, and towermen as upon the faithful performance of duty by the engineers, firemen, conductors, and brakemen.

Moreover, this bill is not only a radical departure from the established policy of the labor leaders of the country, but no such legislation has been asked for by the railway employees themselves and no bill to that effect was introduced in either House of Congress at the request of any representatives of the four railway brotherhoods. This bill is here as a result of a message from the President of the United States, in which he suggested a comprehensive plan of legislation, of which the provisions of this bill constitute only a small part. A motion to recommit the bill, so that the Committee on Interstate and Foreign Commerce might report a bill embodying all the legislation recommended by the President, has been voted down. I firmly believe that, if the bill had been so recommitted, the President's request to the representatives of the four railway brotherhoods, to postpone the strike until Congress could intelligently act after careful investigation, would have been granted.

That the hurried passage of this hastily drafted bill is a bad thing for all concerned is the real belief of practically every member of this House. That it is ill advised from every point of view is the overwhelming opinion of the people of the United States. That it will not accomplish its avowed purpose, but is simply another "gold brick" put forth by the party in power as a means of getting votes at the approaching election, must be evident to every intelligent observer. The bill in its present form, providing, as it does, for an increase in wages of a special class of the employees of private corporations, is in my opinion unconstitutional, and will be so held by the Supreme Court of the United States. It will therefore be of no value to the small class of laboring men affected by its provisions, while the unfortunate circumstances of its passage will prove disastrous in the long run not only to them but to organized labor as a whole.

In short, this bill was not asked for by the railway employees; it is hasty and ill-advised legislation, transcending the constitutional powers of Congress; it has been reported and is being rushed through purely on the grounds of political expediency; and it will, in my opinion, not only fail to accomplish any good purpose but will in the long run prove injurious to the best interests of organized labor and harmful to the country.

## The Underwood Democratic Tariff.

### EXTENSION OF REMARKS
OF
### HON. FRANK L. GREENE,
OF VERMONT,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. GREENE of Vermont. Mr. Speaker, I desire to call attention to a statement of Leslie M. Shaw, former Secretary of the Treasury, which appeared in the Washington Post of August 3, 1916, and which has been much discussed as one of the most accurate and convincing analyses of the threat to American

workingmen and business interests that the Underwood Democratic tariff holds over this country to take effect when the war in Europe comes to an end.

Mr. Shaw said:

At the close of the Napoleonic wars, 100 years ago, in 1816, the Democrats reduced the tariff so that the average duty on imports was over 22 per cent. The average duty collected now under the Underwood tariff is less than 9 per cent. What may we expect at the close of the present European war?

Thomas Benton, a Democrat, told of the effect of the 1816 tariff in his Thirty Years in Congress, when he declared there was "no price for property, no sales except those of the sheriff and the marshal, no sign of the hammer except that of the auctioneer knocking down property." Horace Greeley described it by saying, "Great Britain poured her fabrics, far below cost, upon our markets in a perfect deluge, manufactures went down like grass before a mower, and agriculture and labor speedily followed."

Woodrow Wilson, in his History of the American People, declared that "English merchants poured their goods once again into American ports so long shut against them by embargoes and war. It was manifestly injurious to every young industry. The remedy was a protective tariff, such as Mr. Hamilton had wished, and the young Republicans did not hesitate to advocate and establish it."

As a historian Woodrow Wilson is a protectionist; as a Democratic politician, he declares it a fundamental principle of the Democratic Party that under the Constitution the Government has no right or power to levy tariff duties except for revenue.

Lloyd George recently declared that England had increased her efficiency in many instances eightfold in spite of the fact that more than 4,000,000 men were in the army. I suppose the factories of England are turning out four or five times as much as before. Germany is operating her factories and small shops with convalescent soldiers and women at twice normal capacity and has over $2,000,000,000 worth of goods ready for shipment when the seas are opened. Barring Belgium, Poland, and a little strip of northern France, not a factory has been destroyed and many times as many persons are employed in the factories as before. Within three months America was underbid by England on a large contract for pipe for South America and was underbid by Germany on a contract for $1,000,000 worth of munitions machinery for Sweden. Before the war England was giving considerable attention to sports; in the last six months there has been no polo, no cricket, no sports; only war and business. When the war is over there will be nothing but business. England has been taught economies that will not cease after the war.

I am interested in the American pay roll when the war ends, and the prosperity of every farmer, every citizen, is dependent upon that pay roll. When that pay roll ceases prosperity ceases, and every point, every angle, is a bloody angle.

## The American People Are Neutral and Will Crushingly Rebuke Jingoistic Utterances.

### EXTENSION OF REMARKS

OF

### HON. ALFRED G. ALLEN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. ALLEN. Mr. Speaker, the gentleman from Massachusetts [Mr. GARDNER] is one of the responsible spokesmen of the Republican Party in this House. He is second on the Republican minority of the great Committee on Ways and Means. In the event that the Republicans should unfortunately control the next House and the distinguished gentleman from Michigan [Mr. FORDNEY] should be in any way retired, Mr. GARDNER would be the Republican floor leader in this House, with all the power that that office takes with it. Only a year or two ago he was the Republican nominee for governor of Massachusetts. He is the son-in-law of Senator HENRY CABOT LODGE, of Massachusetts, who is the bosom friend of Theodore Roosevelt, the senior member of the firm of Roosevelt, Hughes & Co., now running for President.

In the event of a return to Republican control, Mr. LODGE would be chairman of the Senate Committee on Foreign Relations, and from his utterances from time to time presumably shares the view of the gentleman from Massachusetts, that the Congress of the United States should be but the adjunct of the English House of Commons. There can be no doubt that when Mr. GARDNER speaks, he speaks for the Republican Party. So long ago as last May he introduced in this House the following joint resolution (H. J. Res. 231, 64th Cong., 1st sess.):

*Resolved, etc.*, That the Congress of the United States heartily congratulates France and her allies on the success which is so certain in the near future to crown their superb efforts; and further,

*Resolved*, That the Congress of the United States expresses its heartfelt admiration of the 200 000 Irishmen who are now heroically serving the cause of their country and of civilization in the trenches in France and Belgium; and further

*Resolved*, That the Congress of the United States would view with apprehension any inconclusive and premature peace which would encourage the world to believe that nations may with impunity violate every law of God or man; and further

*Resolved*, That the Congress of the United States utterly condemns all efforts, no matter how plausible the disguise, which are designed for the purpose of embroiling the United States with France, Great Britain, or any one of their allies.

No effort has ben made by the Republican Party in this House to depose Mr. GARDNER from his position of leadership on account of these intemperate utterances. Instead he has been billed in Maine and elsewhere as one of the star orators of the party.

It may fairly be said, then, that when he criticizes the Democratic Party because it has tried to be neutral, because it has attempted to be fair to the Teutonic allies as well as the entente allies, because it is insisting that England as well as Germany should respect American rights, he represents the views of his party. We welcome the issue. We believe in neutrality. We are opposed to the policy advocated by the gentleman which would have forced us into war with Germany over the question of Belgium. We believe that the American people are likewise neutral and will crushingly rebuke the jingoistic doctrine of the gentleman from Massachusetts and his party.

## Truth Needs No Defense.

### EXTENSION OF REMARKS

OF

### HON. JAMES V. McCLINTIC,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. McCLINTIC. Mr. Speaker, under leave granted me by the House to extend my remarks I desire to make the following observations: Campaign falsehoods formerly played a more or less important part in every campaign for a public office. Mudslingers, character assassins, and debauchers of public records have had their innings, so that to-day no honest man will support any person for a public office who deliberately and maliciously publishes false and misleading statements about another, thereby seeking to deceive the public.

Congressman MANN, the Republican leader of the House and a very excellent gentleman, recently, when attacked, made the following statement, which shows that a man in public life will be accused of practically anything by those who have no regard for the truth, and more especially when they want the position he is holding:

Mr. Speaker, no one in public life escapes more or less misrepresentations. As a general thing, I pay no attention to misrepresentations of what I do or say. But a Mr. ———, who is a candidate for the Republican nomination for Congress against me, has published a lot of statements so utterly devoid of the truth that I am constrained to refer at least to one of them, etc. (From CONGRESSIONAL RECORD, Aug. 22, 1916.)

My Socialist opponent, realizing that it was impossible for me to come home, has in my absence sought to poison the minds of the people by circulating a little, cheap, unsigned circular, which makes the same charges he made two years ago. He does not dare attack my record as a Member of Congress, but feels that the people will believe his unreliable statements made in this connection. As a rule I do not pay any attention to statements of this kind, as the majority of the people of my district realize that this party will do anything to deceive the public. For instance, he again publishes a charge, as follows:

HIS CHARGE.

Opposed the eight-hour law for women.

THE RECORD.

Page 902 senate journal shows my vote cast for this bill. Page 972 shows my vote in favor of conference report; and the following certification under the seal of the State of Oklahoma has been made by the secretary of state:

I, J. L. Lyon, secretary of state of the State of Oklahoma, hereby certify that the senate journal of the fourth legislature, regular session, of date of March 17, 1913, pages 971-972, on the question of "An act regulating hours of employment of females in certain industries, and providing a penalty therefor," J. V. McCLINTIC, senator, is recorded among the yeas, voting for the said measure; and I further certify that said record can be found in the fourth name of the third line from the bottom of page 972 of the printed senate journal of said fourth legislature.

Done at the capitol, in Oklahoma City, State of Oklahoma, this 21st day of August, A. D. 1916, at 1 o'clock p. m., and of the independence of the United States of America the one hundred and forty-first.

[SEAL.] J. L. LYON,
*Secretary of State.*

Either the records are all wrong or this bill received my support. Judge for yourself.

COTTON LEGISLATION.

The records of the courts of the State of Oklahoma will show that the bill introduced by myself which made the compresses accept the weights of local cotton yards was attacked by those having stock, or interested in compresses, and, through their hired attorneys, the law was finally declared unconstitutional.

HIS CHARGE.

That I am the author of the cotton-weighing bill in the interest of the compress corporations.

THE RECORD.

Page 569, senate journal, 1913, shows there was not a single member of the senate that voted against this bill. Is it not rather strange that all of the members of the senate, both Democrats and Republicans, were so ignorant that they did not know what they were doing, and that it was left to a Socialist to make this great discovery? The fact of the matter is, the Socialist that made this charge is so ignorant that he would not know a corporation from a compress, and no greater falsehood was ever published than his untrue charge.

LABOR LAWS.

As a Member of Congress I have voted for the child-labor bill, the workmen's compensation act, the stop-watch amendment law, and every single bill in the interest of the workingman. I have received the following letter from Congressman VAN DYKE, one of the present leaders in labor legislation, which shows how I stand in Washington, and that the statements made by my Socialist opponent are not true.

WASHINGTON, D. C., *August 1, 1916.*

Hon. JIM MCCLINTIC,
*House Office Building.*

MY DEAR COLLEAGUE: I feel very kindly toward you personally for the splendid assistance you have given to those who are interested in taking care of the workingman's interest. I thank you so much for the aid you rendered me on the stop-watch amendment law, and inasmuch as you have voted for all bills in the interest of labor, your record as a Member of Congress should entitle you to receive the support of the workingmen everywhere.

I trust you will have no opposition this fall, and if I can be of any service to you at any time please feel free to command me.

With great respect, I am,

Sincerely, yours, CARL VAN DYKE.

The State of Oklahoma has a corporation commission that received certain authority from its constitution, and being informed that they had full jurisdiction over certain matters affecting employees on railroads I felt that it would be an unjustified expenditure of public money in passing useless legislation. The corporation commission in a letter dated July 3, 1914, corroborated the above statement, and this proves that the State of Oklahoma did not need full-crew legislation.

The letter is as follows:

OFFICE OF THE CORPORATION COMMISSION OF OKLAHOMA,
*Oklahoma City, July 3, 1914.*

Hon. JIM MCCLINTIC,
*Snyder, Okla.*

DEAR SENATOR: On the 25th you addressed a letter to Chairman Love asking if the commission had authority to require additional men to work on public-service properties.

In reply thereto, beg to advise the commission has authority to require a railroad company or other public-service properties, such as telephone companies, to employ sufficient help to render prompt and adequate service to the public, and sufficient help that utilities may be operated with due regard to safety.

The commission has required additional station agents and could require additional brakemen and additional telephone operators upon complaint and proper showing.

Yours, very truly, GEO. A. HENSHAW,
*Commissioner.*

After you have read this letter ask yourself if it would be wise for the State legislature to waste fifteen or twenty thousand dollars in passing a law that was not needed. Also ask the Socialist representatives of the fifth legislature why they did not insist that a full-crew bill be passed.

The secretary of state, in a letter dated August 21, 1916, states "there were many votes taken on the McMeacham resolution, but in none of them do I find a reference to convict labor."

HIS CHARGE.

That I favored convict labor on the State capitol.

THE RECORD.

I have never voted for any bill that favored convict labor in preference to any other kind of labor. If legislation of this kind were on the statue books of Oklahoma, no doubt convicts would to-day be constructing the State capitol. The only stand I took on this particular bill was to oppose the same until Oklahoma City had made good her promise, and my action in this connection caused an extra item to be added which saved the taxpayers $100,000.

OTHER MISSTATEMENTS.

I have in my possession another one of the Socialist campaign circulars, in which the following language is used in making one of his customary untrue accusations:

HIS CHARGE.

Referring to game wardens:

MCCLINTIC does not say so, but he was the man that wrote the bill that created the same offices.

THE RECORD.

Page 626 of the house journal shows that this bill was introduced on February 21, 1911, by Representative Eugene Watrous, of Enid, Okla. If any man in the seventh congressional district desires to corroborate this statement, let him address a letter to Mr. Eugene Watrous, of Enid, Okla., and he will readily learn that my Socialist opponent published as big a falsehood as ever was circulated anywhere.

I might go ahead and take up each item contained in his unjust, misleading circular, but life is too short to pay further attention to a man who has no regard for truth or honesty. I will call your attention to but one more of his unjust accusations, which is as follows:

HIS CHARGE.

I brand your rural-credits law a brazen fraud.

THE RECORD.

There are 435 Members of the House of Representatives. When this bill was voted on all of those present, except 12, supported it. Among those voting for the bill was the Socialist Representative in Congress, and it is a rather peculiar thing to me that he should vote for a bill which Mr. Stallard would pronounce a brazen fraud. Of course there may be a few people who think that my Socialist opponent is so much smarter than any other man connected with his party, and really that Congress should apologize to him for passing this law without receiving his consent. There is an old saying that ignorance is bliss, and convince a fool against his will and he remains a fool still.

When the currency act was passed my Socialist opponent reared up on his hind legs and roared a protest loud and long. He proclaimed with all the force that can come from a pair of leather lungs that this was another iniquitous measure forced upon the people. Yet the change brought about shows that this law has proved to be such a popular measure that no party could to-day be successful that would advocate its repeal. The Government for the first time in 100 years has control of its currency, and as long as this law remains on the statute books no set of men will ever be able to bring down upon this country another disastrous panic.

Really it is ridiculous to hear a person branding a law as a failure before it has ever been put in operation. The record included in Senate Document No. 500 gives a detailed account of practically the same system, which is now being used successfully in Germany, Russia, Italy, Roumania, Serbia, and many other European countries. It has been in use in some of these countries for nearly 100 years, and the rates of interest have been gradually reduced from 30 per cent to the uniform rates of 5 and 6 per cent.

It will be very interesting to note that the Washington Post, one of the most prominent newspapers in the United States, has published the following editorial relative to the new rural-credit law. It reads:

Next to the establishment of the Federal Reserve System, which has reduced to a minimum the danger of sudden financial depression, the Federal farm-loan act, popularly called the rural-credit law, is the most momentous piece of financial legislation written upon the statute books in the past score of years.

It is doubtful whether the farmers as yet realize the full import of this new law. Just as the new banking and currency system gives to the business men of the Nation a more elastic currency and greater facilities for credit, so the rural-credit act extends to the farmers of the country the same quick credit that is now enjoyed by manufacturers and other business men.

The essence of the new rural-credit law is in the establishment of a uniform rate of interest for the farmers. It will not help a lazy or shiftless farmer, but it will remove at once the hampering influences that halted the progress of men who have labored ceaselessly to get rid of debt in the operation of small and large tracts of land.

No longer will there be any gouging of the farmers, no matter where they may be located. No Federal land bank is permitted to charge more than 6 per cent per annum on its farm-mortgage loans, and if one of these banks pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes. Thus if those who now invest their money in farm-mortgage loans receive only 4 per cent on their investment, they will have the satisfaction of knowing that the farmer is paying only 5 per cent.

Farm lands, which are the very keynote of the Nation's prosperity, hitherto have not been considered a very good investment by the average citizen. To attract money to the farm-loan field, however, the new law provides a method whereby those who have money to lend can find safe investments in the form of debentures or bonds of small and large denominations, issued by the banks and based on the security of mortgages on farm lands.

Not only a method, but an inducement, is thus offered for investments in agriculture.

Much will depend upon the initiative shown by the farmers themselves in the development of this new system. In its general effects it is not unlike the building and loan associations which have grown up in all the large American cities and which have enabled so many working people to acquire their own homes. The associations which the farmers will form, under the new system virtually will dominate the 12 land banks which are to be established. They will pass upon the reputation and reliability of their own members. There will be a new community of interest among the farmers of the country, and there should be an immediate strengthening and improvement in the agricultural resources of the Nation in addition to the improvement in the condition of individual farmers.

In writing this new law upon the statute books Congress has performed a service not only to the farmers themselves, but to the whole country, whose prosperity is based in such large measure upon its agricultural resources.

THE NAVY BILL.

The editor of a newspaper at Cordell has published an editorial in which he calls on the people to ask McCLINTIC why he voted against the Navy bill. Feeling that he had made an honest mistake, I addressed the following letter to him on the 28th of August, 1916. The letter:

Editor M. H. GUNSENHOUSER,
*Herald-Sentinel, Cordell, Okla.*

MY DEAR SIR: My attention has been called to an editorial in your paper in which you have suggested to the voters that they ask me why I voted against the Navy bill. I take it that you would not misrepresent the records, and in a spirit of fairness I am calling your attention to page 14705 of the CONGRESSIONAL RECORD, under date of August 15, 1916, which shows that the roll call that you have referred to was on amendment No. 238, which was the building program, and not the Navy bill.

I voted for the Navy bill when it first passed the House, and inasmuch as there was a controversy between the House and the Senate as to whether we should have a one-year program or a four-year program this question was finally decided by a roll call. I felt that inasmuch as new inventions were being made every day which are rendering many ships in operation practically obsolete, it would not be best to increase the appropriations carried in this bill to $600,000,000 at this session of Congress. Everybody realizes that there will be a session of Congress next December and one the following year, and that it will not be necessary to prepare long programs ahead for the expenditures of this kind; and I did not believe it was good judgment from a business standpoint to authorize huge expenditures of this kind several years in advance.

Inasmuch as you have misquoted my vote on this bill, I take it that you will be fair enough to print the proper correction.

Very respectfully,

JIM MCCLINTIC.

P. S.—Three Representatives from Oklahoma voted as I did on this question, and among them was the Hon. DICK T. MORGAN, of your party.

SOCIALISTS REPUDIATE OWN CANDIDATE.

There are some members of this party that have awakened to the fact that in their candidate for Congress they apparently have a wolf in sheep's clothing, and it no doubt will be interesting to know how he is regarded by certain leaders connected with his own party living in the district. Some time ago he gave out a statement on the land question, in which he said:

I favor the exemption of 640 acres from the operation of the law—

And so forth.

Comrade John G. Wills, of Granite, Okla., used the following language in expressing his utter disgust at his stand on "landlordism":

If we are so unfortunate as to place a Populist windbag in an executive position and for notoriety he publicly puts us to shame, we believe there are enough "real Socialists" in Oklahoma to make his position anything but a bed of roses.

Continuing further, Mr. Wills states:

These hallucinations are the result of an abnormal, inordinate desire to reach the gas house at Washington and has developed a stubborn case of reactionary impossibilism.

Later on, on the 7th day of September, 1915, a movement was put on foot to recall the Socialist candidate for Congress as a member of the Socialist State executive committee for publicly insulting the combined intelligence of the Socialist Party by making absurd and erroneous statements. A statement to this effect was signed by Comrade C. A. Allen, chairman, and W. M. Rea, secretary. The members of his own party have accused him of circulating absurd, untrue, and erroneous statements, and if the members of his own party feel that in him they have a black sheep that has no regard for the truth, how in the name of common sense could any honest man believe him under oath?

Oklahoma has one Socialist State senator. He is a resident of the same congressional district that this party is a candidate from. He knows that no dependence can be put in this individual, and he is honorable enough to refuse to affiliate or have anything to do with him.

Recently, in a letter which I have in my possession, he made the statement he would have nothing further to do with him, and sought to secure certain records of his conduct in the past.

A few self-styled leaders at Snyder apparently think they own and control the Socialist Party in the seventh congressional district. From past occurrences it would seem that they say who shall be the nominees and then call on the rank and file of the party to pay the fiddler. Their first appeal to the dear comrades always reads something like this: "We have the dope on MCCLINTIC; send us the money, and send it quick. We have arranged with a great agitator to deliver 12 speeches; he is a wonder; send us some more money. Our candidate has an easy race, but he needs a few more quarters and dimes to pay postage." It is always, "Send us the money."

I have had furnished me the present Socialist Representative's record in Congress. If you approve the same, comply with the request made in the letter sent out from Snyder, under date of August 10, and send them a few more dimes and quarters. Here is the record:

SOCIALIST REPRESENTATIVE'S RECORD IN CONGRESS.

(1) He voted against reducing the mileage (40 cents a mile, one way).

(2) He voted against giving the President authority to use the National Guard.

(3) He refused to vote for an appropriation to protect our rights on the sea.

(4) He voted for the adoption of the conference report on the rivers and harbors bill (pork barrel), amounting to $41,000,000.

(5) He offered an amendment which would prevent the use of the National Guard in the case of riots and strikes. If this had been adopted, law and order would have been a thing of the past.

(6) He refused to acknowledge the Stars and Stripes as an emblem of loyalty and patriotism, when questioned by Congressman KING, of Illinois.

(7) He refused to listen to the labor organizations when they called on him to vote for a literacy test in the immigration law.

(8) He was forced to withdraw his remarks when he said that citizens have the right to put the knife of an assassin into the heart of any man who attempts to govern them against their will. One Republican Member—Mr. AUSTIN of Tennessee—expressed regret that he was unable to move his expulsion from the House of Representatives.

(9) He made the statement that "there can be no such thing as offending national honor."

(10) He voted against giving station agents, trackmen, and certain others connected with railroads the benefit of the eight-hour law.

If Congress was in the control of the Socialist Party, and the vote of the present Member is a criterion to follow, ask yourself how long this Nation could survive.

CONCLUSION.

In conclusion, I desire to say that inasmuch as the former mayor of the town in which both of us have lived for a number of years published his record two years ago, and the same has never been denied or refuted, it is of sufficient importance that every man in the district should have the opportunity of reading it. The statement follows:

JIM M'CLINTIC, A SUCCESS, VERSUS H. H. STALLARD, A FAILURE—HOW WILL YOU CAST YOUR VOTE?

Snyder is the home of three of the nominees for Congress. Jim McClintic is the Democratic nominee; H. L. Vogle is the Progressive standard bearer; and H. H. Stallard is the misrepresentative of the Socialist Party.

McClintic and Vogle are among our very best citizens and are conducting a clean, honest, and gentlemanly campaign.

Stallard and some of his henchmen are conducting a campaign of misrepresentation unparalleled in the history of Oklahoma.

We have no desire to meddle in Stallard's race, for the people in Snyder treat his running-for-office brain storms as mere jokes; in fact, he and his numerous attempts to get office are the laughingstock of the community. But in his speech here last Saturday he took occasion to use our name several times in his tirade against all persons who were supporting McClintic, the Democratic nominee for Congress; therefore we desire to let the people of the seventh district know who H. H. Stallard is.

Stallard is a failure. Stallard hit the county running for office and has never stopped.

1. He asked for the office of county assessor on the Democratic ticket and his own neighbors helped defeat him. He failed.

2. He asked for the office of county treasurer on the Democratic ticket and was snowed under. He failed.

3. He joined the Farmers' Union and asked that grand order to send him as their delegate to the constitutional convention. A man who is now running a pool hall in Snyder beat Stallard. He failed.

4. He ran all over the district trying to make speeches for "Haskell and the Constitution." Everyone in Snyder says Haskell promised him a good fat job. He didn't get it. He failed.

5. Stallard got mad, and the next thing we knew he was running for Congress on the Socialist ticket. He wasn't elected. He failed.

6. Then Stallard ran for justice of the peace, a job entirely too big for a .22-caliber man; he wasn't elected. He failed.

7. He ran for Congress again, but the political star which governs his destiny guided him to defeat again. He failed.

8. Stallard has farmed a little, but he went out "politicing" and let about 1,000 bushels of potatoes freeze. This put him on the bum. So he failed.

9. He at one time owned the Kiowa County Democrat and ran it from October, 1906, to March, 1907, but he tried to run the Farmers' Union and everything else at the same time, and, of course, he failed.

10. He was put in charge of the Farmers' Union Advocate at Shawnee and ran it about three months, but his running qualities got him in bad and he was asked to run home. He has tried to run Haskell, the first legislature, the Farmers' Union, and the whole Government; and he just naturally overloaded his feeble mind. Consequently, he failed.

Stallard is always off on the wrong foot. He is one of those fellows who, because of his numerous failures, can not see any good in the man who succeeds. If he sees a successful man like JIM MCCLINTIC climbing to the top, he cries "Grafter," "Frisco Jim," etc.

The Snyder Commercial Club sent JIM MCCLINTIC to St. Louis to secure the plans and specifications for Snyder's new $30,000 depot. JIM got them, and every man, woman, and child is proud of both JIM MCCLINTIC and the new Frisco depot. We really believe Stallard is proud of the depot, but we said every man.

Recently we asked JIM MCCLINTIC to meet with the representatives of the Frisco at Thomas to investigate the new cheese factory at that place. JIM went, and we feel that it will only be a short time until like factories will be established at Snyder and other towns, where the farmers may sell the products of their cows.

JIM MCCLINTIC has been successively and successfully farmer, clerk in a dry goods store, city clerk, county clerk, State representative, State senator, and is now the Democratic nominee for Congress from this district. He owns and conducts one of the largest dry goods stores in this part of the State—"The Texas Store."

JIM MCCLINTIC is a success.

H. H. Stallard is a failure.

Both MCCLINTIC and Stallard live here and have been residents for over 11 years. Almost any business man or farmer will verify the above.

Respectfully submitted to the voters of the seventh congressional district.

JOHN ANDERSON, *Snyder, Okla.*

The statement made by Mr. Anderson in this connection was published two years ago. I am now informed that the Socialist candidate attempts to make the people believe that I had him appointed postmaster as a reward for making this public utterance. This could not be true, for Congressman FERRIS made all the appointments in that portion represented by him until March, 1915. As further proof of my statement in this connection, I refer you to the following letter from the Postmaster General:

OFFICE OF THE POSTMASTER GENERAL,
*Washington, D. C., August 22, 1916.*

Hon. JIM MCCLINTIC,
*House of Representatives.*

MY DEAR MR. MCCLINTIC: In reply to your letter of the 18th instant I desire to advise you that Mr. John H. Anderson was appointed postmaster at Snyder, Okla., on June 23, 1914. Examination of the brief of the case on which Mr. Anderson was appointed shows no statement or recommendation from you in regard to the postmastership. It is shown that the office at that time was in the district represented by Hon. SCOTT FERRIS, and that in accordance with the department's usual practice in such cases a recommendation was secured from him in regard to an appointment for the Snyder office.

Very sincerely,

A. S. BURLESON.

OTHER LEGISLATION.

During this session of Congress I have introduced bills providing for a system of rural credits; Federal aid in the construction of roads; reapportionment of irrigation money for Oklahoma; a bill to restore homestead rights to those filing in the Big and Little Pastures; a bill to protect innocent purchasers from buying watered stock or inflated securities; a bill to protect the purchasers of railroad bonds by giving the Interstate Commerce Commission certain jurisdiction; a bill to dispose of public lands in abandoned town sites in Oklahoma; and a bill to give to the State of Oklahoma, for the benefit of its schools, 40,000 acres of land and $210,000. The last bill referred to has received a unanimous favorable report from every committee it has been referred to, and, inasmuch as it is now on the Unanimous Consent Calendar, the members of the Oklahoma delegation believe that it will become a law at the next session of Congress.

It has always been my policy to make my campaign on my record and never to resort to unfair methods. I have studiously refrained from making any statement concerning these charges until now; and were it not for the fact that many of my friends have asked that I make a statement, I would pass the same, feeling that the honest voters of the seventh congressional district know me well enough to appreciate the fact that during the 14 years I have lived in Oklahoma my best efforts have been put forth in trying to develop the resources of our section and to do what I could for my people.

On the first day that my name went on the pay roll I opened my office in Washington, and it has been kept open every working-day since. I have never worked any harder in my life than I have in trying to bring about the most good for the people that live in the seventh congressional district.

I am going to continue faithfully to perform my duties, and, while there are those who would seek to discredit me by publishing statements that are not true, I feel certain that those who have the best interests of our section of the country at heart will approve my efforts in their behalf.

## Use of Public Schools in the District of Columbia as Community Forums.

### EXTENSION OF REMARKS
OF
### HON. BENJAMIN K. FOCHT,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. FOCHT. Mr. Speaker, I desire to call attention to House bill 14816, reported to the House from the Committee on the District of Columbia July 29, 1916, providing for the use of public schools in the District as community forums. According to a report accompanying this bill, the measure was unanimously reported back to the House from the committee. I desire to say that this bill was not even reported to the committee proper by the subcommittee, nor could it have been reported unanimously to the House by the committee proper, for the reason that I have opposed the measure as drawn both in the subcommittee and elsewhere, am against it now, and would have opposed it had it been called up for consideration on the floor of the House.

I know of other members of the subcommittee who are opposed to the bill on account of the lack of restriction with respect to the use of the public-school houses of the District of Columbia on Sunday for meetings of indiscriminate purposes, including political discussions calculated to incite contention, discord, and possible riot, as has occurred in other cities where there has been no limit to the latitude of Sunday discussions at these forum meetings.

I am speaking only for myself in connection with this matter, as a member of the Committee on the District of Columbia, and wish to record myself as irrevocably against Sunday desecration and misuse of the public-school buildings made possible if not intended under the provisions of this bill. The report gives the names of a number of people who are in favor of the bill, but it is evident to my mind that the gentlemen who have thus subscribed themselves are not aware of the possibilities for harm within the lines of the measure. Many people residing in the District are pronouncedly opposed to the bill, and among those who appeared and spoke against the measure at the hearings held by the subcommittee were Henry P. Blair, president Board of Education of the District of Columbia. On page 70 of the hearings before the committee, Mr. Blair says:

I do not believe that the volume of enthusiasm which is behind this movement amounts in citizenship to more than 10,000 people.

There are more than 360,000 people in the District of Columbia.

Rev. Dr. John MacMurray, pastor of Union Methodist Episcopal Church, and Rev. Dr. Wedderspoon, pastor of Foundry Methodist Episcopal Church, are strongly opposed to this bill, and their churches have taken action and passed resolutions against the measure, along with almost every other Protestant church in the District. Mr. Roy C. Claflin, teacher in the District of Columbia and president of the Teachers' Association of the District of Columbia, and Rev. Wilbur F. Crafts, superintendent of the International Reform Bureau, also opposed the bill.

Mrs. C. M. Chipman, wife of Dr. Chipman, says on page 129 of the hearings:

Mr. Ward is here, as we know, employed to advance this movement. It is not being advanced by citizens; it is being advanced by people who have come here for that one purpose. His method was objectionable to the women of the District of Columbia. He came into our women's organization and gave a misstatement and a misrepresentation of our board of education. He did not read the forum bill. He brought a resolution to the bodies of women that were not accustomed to this kind of thing. He presented his resolution, and on the face of it it looked very fair, and he insisted that a vote should be taken at that meeting while he was there.

The vote was taken under his pressure and influence, but after he had gone the women secured a forum bill, and after having read it, reversed their resolution, and now stand solidly against the measure. There are 36 of these branch organizations of women in the District.

Mr. W. C. Arnett, a retired teacher with many years experience as an organizer, declares this bill is fraught with more possible evil than any bill that has been offered for the consideration of Congress in 50 years.

Mr. Evan H. Tucker, president of the Northeast Washington Citizens' Association, says of the 70 associations in the District of Columbia he knows of only three that have favored the forum bill. His association, one of the oldest and strongest in the

District, and scores of other citizens' associations have taken action against this bill.

The Board of Trade of the District, of some 1,400 members, leading business and professional men, stands unanimously against this bill.

The Chamber of Commerce of the District appointed a committee to investigate this bill, and that committee stands unanimously against it.

For every vote that the proponents of this bill can produce in favor of it, W. C. Arnett declares that he can produce 20 against it.

We also are reliably informed that many who did not appear before the committee and are well-known educators and leaders of Christian thought and action are against the enactment of the bill in its present form.

## Foreign Monopolies Favored.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, with a flourish of trumpets at Baltimore in 1912, as at previous Democratic conventions, the Democratic Party promised to destroy the trusts and monopolies. But time works wondrous changes and responsibility breeds caution and timidity. The Democratic Party has had time to think over its blatant assurances to the people, and trusts and monopolies still thrive. With the Clayton antitrust law added to the Sherman law and an increase in special attorneys and investigators, the Attorney General's department of the Wilson administration has been singularly inactive in bringing to terms any of the great malefactors who were used so successfully as scarecrows in the 1912 campaign. We have seen these hideous "magnates" call at the White House to receive assurances that they would not be disturbed. We have learned from the Attorney General's office that a reasonable intent to violate the law must be shown. We have heard upon the floor from Democratic sources that there is "a Beef Trust" and "a Food Trust" and several other trusts that are supposed to have increased the cost of living. But we have looked in vain for prosecution under Democratic laws that were supposed "to have teeth in them."

Recently Congress has passed laws permitting foreign combinations to be established in the financial world and in commerce. What the "large interests" wanted in these respects has been granted. The Clayton antitrust law has had many of its "teeth" extracted, and it is gradually but surely losing its bite. The revenue bill, which is now before the House on its final passage, extracts another tooth from the big stick which the Democratic Party has held over the business interests of the country. I do not know whether the extraction of this tooth is a good thing or a bad thing, but I do know it is another case of a great party "taking water." The bill which is now before us, brought hastily from conference, contains an antidumping clause which is wholly in the interest of the foreigner, in that it permits the foreigner to place his own value upon exports to the United States. To that antidumping clause the Senate has added amendment 263, relating to the admission of foreign exports under the antidumping clause, as follows:

*Provided*, That the above shall not be interpreted to prevent the establishing in this country on the part of a foreign producer of an exclusive agency for the sale in the United States of the products of said foreign producer or merchant, nor to prevent such exclusive agent from agreeing not to use, purchase, or deal in the article of any other person.

As this proviso reads it is a clear reversal of the antitrust policy set forth in the Clayton antitrust law, for section 3 of that act—October 15, 1914—specifically denies to American merchants or manufacturers the exclusive privilege that is herein granted to our foreign competitors. I insert section 3 of the Clayton antitrust law:

SEC. 3. That it shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies, or other commodities, whether patented or unpatented, for use, consumption, or resale within the United States or any Territory thereof or the District of Columbia or any insular possession or other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement, or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement, or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

The chairman of the Committee on Ways and Means explains that the criticism just made is met by a further amendment agreed to in conference upholding the Clayton law, which amendment I have just secured and am now able to insert herewith in this extension of remarks:

In lieu of the matter inserted by said amendment insert: "*Provided*, That the above shall not be interpreted to prevent the establishing in this country on the part of a foreign producer of an exclusive agency for the sale in the United States of the products of said foreign producer or merchant, nor to prevent such exclusive agent from agreeing not to use, purchase, or deal in the article of any other person, but this proviso shall not be construed to exempt from the provisions of this section any article imported by such exclusive agent if such agent is required by the foreign producer or if it is agreed between such agent and such foreign producer that any agreement, understanding, or condition set out in this section shall be imposed by such agent upon the sale or other disposition of such article to any person in the United States"; and the Senate agree to the same.

This is the new law. Nevertheless it will be observed that the foreigner is able to do substantially as he pleases, and is thus given a distinct advantage over his American competitor.

## "The Highest Style of the Art."

EXTENSION OF REMARKS

OF

HON. JOSEPH TAGGART,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. TAGGART. Mr. Speaker, the busy American people sometimes fail to appreciate how technical certain parts of the Government work really is. The work in the Bureau of Engraving and Printing is, beyond doubt or question, the most artistic and intricate work of the kind that is done anywhere in the world. In fact, the American printer has taught the world the highest art of printing. There was a phrase in these words, "The highest style of art," used in a House bill to provide for printing certain Government securities and providing that they should be printed accordingly. It gives me pleasure to conclude my remarks by inserting an article from an issue, dated August 15, of a publication called the Plate Printer, published here in Washington, as follows:

"THE HIGHEST STYLE OF THE ART"—ITS ORIGIN AND THE RULE OF REASON, WHICH IS THE LIFE OF ALL LAW.

"The highest style of the art" is an oft-repeated and current phrase among plate printers and engravers. It originated from an eminently respectable source. So it may be well for those who attempt to make little of this expression and laugh down the principle which lies back of it, to first advise themselves whence it originated. Persons who pretend to speak ex cathedra upon all subjects without first acquiring any knowledge of the same are not to be pitied, because they suffer no embarrassment of feelings. Blissful ignorance is their compensation and while persons better informed are tickled at their antics, they go on year after year and finally pass away without ever knowing that they were the butt end of the joke. This phrase is not the coinage of an idle brain nor the thought of designing men to serve a selfish cause, but it is the expression of unbiased legislators, men accustomed to weighing questions in a nice scale, men who approached their work with an open mind, and they were determined to settle for all time the question as to the safest, surest, and soundest method of printing the securities of our Government. It was in the settlement of this question that the phrase "the highest style of the art" was first used. They had in mind one principle—the protection of the people's paper money—and after a thorough investigation of both sides of the question they arrived at the decision that the only way to print our securities from engraved plates on hand-roller presses in "the highest style of the art." The language, "the highest style of the art," was first employed in a bill known as H. R. 9623, entitled "An act to provide for the printing of Government securities in the highest style of the art," and after considering the same, the Senate Committee on Finance in the Fiftieth Congress, second session, made its report, and among other things it recommended the following:

"But granting that Mr. Graves's figures are absolutely correct, and that the use of the steam presses effects an actual saving of 18 per cent in the expense of his bureau, there remains the increased expense of maintaining the Secret Service Division of the Treasury Department, which must be incurred so long as the obligations and securities of the Government can be readily and successfully imitated, an expenditure which can be reduced so soon as the Government shall be able to print its securities or obligations in so perfect a manner as to make it impossible to counterfeit them. And when this degree of excellence in printing our notes and securities shall be reached there will be the further saving of the expense attending the prosecution of captured counterfeiters.

"But the committee can not agree that the mere question of economy in printing the obligations and securities of the Government merits consideration in this connection. In their opinion, there is but one point in issue in considering this bill, and that is the duty of the Gov-

ernment to afford the citizen the greatest attainable security against counterfeit notes; and being satisfied that this security can be obtained in greater degree by using the hand-roller press exclusively, they are unanimously of the opinion that the steam presses should be discarded.

"The committee finds also that while the small value of the internal-revenue stamps and the difficulty of disposing of any counterfeits of that character of Government obligations for a less price than is charged for the genuine issue, presents comparatively but slight inducement to forgers and counterfeiters, it is yet a fact that the inferior work of the steam presses renders it impossible that the design and intent of the engraver whose skill has produced the admirable specimens of his art, which are to be found in the plates from which the revenue stamps are printed, can be fully developed when said plates are worked on anything but a hand press, and therefore they are of the opinion that the internal-revenue stamps also should be printed on the hand-roller presses exclusively.

"As to the second section of the bill, providing that 'hereafter the Chief and Assistant Chief of the Bureau of Engraving and Printing shall be either practical engravers or plate printers,' the committee, after the most careful and anxious consideration and deliberation, are of the opinion that a proper discharge of the duties devolving upon those officials demands a special and peculiar knowledge of the printers' or engravers' art, which can be obtained only by special and practical training. The deliberate conclusion of the committee is that the chief or assistant chief of the bureau should be qualified to decide of his own knowledge upon the merits or defects of any piece of work turned out by any of his subordinates, and be further able of his own knowledge to point out how the defects can be most effectually and expeditiously remedied.

"The committee find further that this ability can not be acquired without preliminary training and experience as a practical printer or engraver, and that no amount of general information, no degree of intelligence, can supply this indispensable practical knowledge or be an equivalent for it."

The Committee on Finance of the United States Senate is respectable authority upon any question, and its recommendation turns the laugh against those who are disposed to be amused at the expression, "the highest style of the art," so that we say again to those inclined to treat our case lightly that they will do well to con over this report, and in so doing they will find out that the originators of the thought, "the highest style of the art," were among the highest and best representatives of our country, and that the rule of reason which guided their deliberations is the law to-day, and no attempt should be made to change that law without first inquiring into the reason for the law. It has been very well said, "The reason for the law is the life of the law." So before you take the life of the law look for the reason, and you will not be so hasty to alter, amend, or repeal the same.

## Grazing-Homestead Bill.

### EXTENSION OF REMARKS
OF
### HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, September 8, 1916.*

Mr. MONDELL. Mr. Speaker, the so-called stock-raising or 640-acre homestead bill, which passed the House in January and has been on the calendar of the Senate since April 13, through the strenuous and persistent efforts of Republican Senators, particularly Senator STERLING, of South Dakota, was brought before the Senate and passed that body this morning and was messaged over to the House about an hour before the time fixed for adjournment. The bill as it passed the Senate contained quite a number of important amendments and would ordinarily go to conference for consideration, but in view of the importance of the measure, western Members especially interested were anxious to urge the adoption of the Senate amendments by the House, thus preparing the measure for the signature of the presiding officers of the House and Senate and of the President. On consultation with the enrolling clerk of the House it developed, however, that it would be utterly impossible, even though the Senate amendments were agreed to, to enroll the bill in time to have it signed by the Speaker and the President of the Senate before Congress adjourned at the hour of 10 o'clock. Under these circumstances any action on the part of the House would jeopardize the bill and probably kill it. In view of this condition it was agreed by all those interested in the bill that it was not wise to move the adoption of the Senate amendments, and the bill goes over to the session of Congress which meets in December, when it is expected action will be promptly taken on the Senate amendments and the bill become a law.

I am not disposed at this time to indulge in criticism of anyone for the failure to secure this legislation at this session of Congress. The fact of the situation known to all is, however, that for five months the bill was on the Senate Calendar, and the Democratic majority of the Senate could have passed it at almost any time if they had been disposed to do so. But for the persistence of Republican Senators the bill would still be on the Senate Calendar. I do desire, however, to call attention to certain amendments which were adopted by the Senate which greatly improve the bill. These amendments are similar to amendments which I suggested or offered in the House at the time the bill was considered there. After the passage of the bill the gentleman from Colorado, Mr. TAYLOR, and myself appeared before the Senate committee and urged these amendments and some others which were not adopted by the Senate. One of these amendments is an amendment to section 3, under which the entryman of a noncontiguous additional tract is not required to reside on the same. Another is an amendment to section 4, under which the provision of the bill which limited the right of additional entry of contiguous lands to one who was residing on purely grazing lands was broadened so as to grant the right to any homestead entryman. A similar amendment was made to section 5, which applies to those who have submitted final proof on their lands. These two amendments vastly broaden the opportunities for additional entries under the law, as under the bill when it passed the House only those entrymen now occupying lands of the character described in the act, namely, grazing lands, were allowed to take additional entries. A similar amendment broadening the opportunities under the law was made to section 9, the section which authorizes the purchase at $1.25 an acre of contiguous land. An amendment was also made to section 11 broadening the provision with regard to stock driveways.

The bill as thus amended is not perfect, but it is much better than it was as it passed the House, and it is hoped that it will speedily become a law on the reassembling of Congress.

## Mexican Affairs.

### EXTENSION OF REMARKS
OF
### HON. HENRY D. FLOOD,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,
*Thursday, September 7, 1916.*

Mr. FLOOD. Mr. Speaker, a gigantic attempt has been made by the nominee of the Republican Party and by a number of Republican Party leaders to make a campaign issue of President Wilson's Mexican policy.

This attempt has been made, Mr. Speaker, because the record of the Wilson administration and the Democratic Congress has been so splendid that the campaign managers can find nothing in that record to truthfully criticize. These gentlemen believe that the people of the country are well posted on the acts of the administration in relation to domestic affairs and our foreign relations with European countries, but indulge the hope that they have been so absorbed in their own affairs and in the great European war, and the momentous questions arising out of it, that they have not kept posted on the Mexican situation, and that therefore they can be misled by the unfair and unjust criticisms of the part this administration has taken in reference to Mexican affairs.

A number of speeches have been made in the House, in the Senate, and in the country during the past four or five months attacking President Wilson's Mexican policy, all of which have been very completely and satisfactorily answered. The answers to the speeches at first made were so complete that on the 18th of August the distinguished gentleman from Pennsylvania, Dr. TEMPLE, undertook the task of adding something to the attacks that have heretofore been made upon the Mexican policy of the present administration. The gentleman from Pennsylvania is well equipped for this task. He was, until he came to Congress, professor of history and political science in Washington and Jefferson College of Pennsylvania. Since he has been in Congress he has been a member of the Foreign Affairs Committee of the House. He is a man of great ability, high character, and an industrious student. It is to be assumed, therefore, he said everything in criticism of President Wilson's action in regard to Mexico that could be said.

Dr. TEMPLE'S speech followed to some extent the lines made by other Republicans who have addressed themselves to this subject, but he advanced criticisms that have heretofore not been made.

The fundamental point of his attack upon President Wilson's Mexican policy, however, is the same as that of all other critics of this policy, viz, failure to recognize Huerta as the President of the Mexican Republic. But yet the gentleman from Pennsylvania would not himself say that Huerta should have been recognized. He asks the question in his address, "Should we have recognized Huerta?" He does not answer it directly but infer-

entially. The inference may be drawn that he thinks Huerta should have been recognized, but this is a mere inference, because the learned gentleman fails to be frank and fair in this matter, just as Mr. Justice Hughes has and just as many other Republican speakers have who have addressed themselves to this subject. None of them have ever declared that they thought Huerta should have been recognized, and some of them have declared that they "approve the action of the President in refusing to recognize as President of Mexico Victoriano Huerta."

Mr. Speaker, I think every criticism made of the President in this matter by the gentleman from Pennsylvania can be fully answered, as have the criticisms of those who have spoken on this subject prior to the time he spoke.

I am fully satisfied that those of the American people who have kept abreast of this question approve the course of President Wilson in not recognizing Huerta; that is, with the exception of those who had acquired interests in Mexico which they thought would be better subserved by a corrupt military dictator than they would be if the people controlled their own government. I have not the slightest doubt that the American voters between now and the 7th of November who are not fully informed on this question, but who will take the trouble to study it—and I believe most of them will do so—will approve President Wilson's course.

The gentleman from Pennsylvania, Dr. TEMPLE, does not make plain wherein a different attitude by President Wilson would have been less costly to American life and property, though he asserts that some other course would have been so. Surely if we had intervened not only would we have sustained tremendous expense and loss in our Army, but American life and property existing in Mexico at the time of such intervention would have been practically wiped out entirely.

President Taft sent the following telegram on April 19, 1911, to the governor of Arizona:

> The situation might justify me in ordering our troops across the border and attempting to stop the fighting or to fire upon both combatants from the American side. But if I take this step I must face the possibility of resistance and greater bloodshed, and also the danger of having our motives misconstrued and misrepresented, and of thus inflaming Mexican popular indignation against many thousand Americans now in Mexico and jeopardize their lives and property. The pressure for general intervention, under such conditions, might not be practical to resist. It is impossible to foresee or reckon the circumstances of such a course, and we must use the greatest self-constraint to avoid it. I am loath to endanger Americans in Mexico, where they are necessarily exposed, by taking radical steps.

On July 22, 1912, Senator FALL made a speech in the Senate in which he said, "An ultimatum should be sent to the so-called Mexican Government that within a given length of time killing and destruction of property must cease in Mexico." This evidently was meant to apply to Mexicans, because the statement was not qualified by the use American or foreign. Intervention really meant more for us than war, with its attendant expenditures of blood and treasure.

At the beginning of the Madero revolution, the latter part of 1910, the Madero followers, who were collected together in groups sufficiently large to enforce their demand upon the scattered American settlers, took, either by threats or by force, from these settlers all of their arms and ammunition, so that shortly after the beginning of the Madero revolution a greater portion of the American citizens residing in northern Mexico had scarcely a single arm with which to defend themselves against outrage of any character and were thus, to all intents and purposes, in a perfectly defenseless condition. Intervention under such circumstances would not have been war; it would have been practically murder—murder for those isolated, defenseless American citizens residing in Mexico. It should be borne in mind that at the time President Taft sent the message alluded to to the governor of Arizona, and at the time Senator FALL made his speech, Mexico, and particularly the northern part of it, was infested with bands of insurrectionists interspersed with bands of well-armed brigands wholly without discipline.

The gentleman from Pennsylvania makes the statement that, in addition to the punitive expedition in Mexico, the United States has its forces in Santo Domingo, Nicaragua, and Haiti, and it is evident that he places the blame on the present administration, overlooking the fact that the previous administration entered into an arrangement with the Dominican Republic authorizing such action, and that it was during the term of the previous administration that the marines were landed in Nicaragua, at Bluefields, in the early part of May, 1910, and again at Bluefields on August 17, 1912. On August 3, 1912, a force of 100 marines and 5 officers were landed at Corinto, Nicaragua, and were sent to Managua, the capital of Nicaragua, where they have since been stationed. Following a similar line of action the present administration landed marines in Haiti to prevent an occupancy of that country by forces of the French Government. As a matter of fact, when the trouble broke out in Haiti during the early part of 1915, marines were landed from a French man-of-war and were in occupancy of Haitian territory for a few days, until the arrival of Admiral Caperton, who, in keeping with the principles of the Monroe doctrine and under directions from this Government, relieved the French forces, supplanting them with American marines. At no time since the landing of the American forces in Haiti could these forces have been withdrawn without the French forces replacing them.

The gentleman from Pennsylvania draws upon his imagination when he claims that when, in March, 1913, President Wilson announced the principles that would control his policy, he singled out Mexico. This is purely conjecture, because in a portion of Secretary Bryan's telegram to the diplomatic officers of the United States to all the principal Latin-American Republics, which the gentleman quotes, it certainly had no specific application, but merely a general one.

The gentleman from Pennsylvania says:

> Less than a month before, Francisco Madero had been President of Mexico. On March 18 his power was taken from him.

It appears that Mr. TEMPLE juggled with the dates solely for the purpose of putting the latter event in the calendar of the Democratic administration, when, as a matter of fact, it occurred one month previous while the Republicans were in power. Again, alluding to the quoted part of the telegram referred to when the President said, "We can have no sympathy with those who seek to seize the power of government to advance their own personal interests or ambitions," he was stating a general proposition, the reason for which can be easily discerned by anyone who will take the least trouble to review the history of our sister Republics.

The gentleman from Pennsylvania in his speech makes allusion to the attempt of Huerta to place a bond issue in Europe, and endeavors to blame this administration for having destroyed Huerta's credit. Not having recognized Huerta was sufficient notice to the world that this Government did not look with favor upon him, and if the simple fact of Huerta's nonrecognition by this Government was sufficient to destroy his credit, it is something that the people of the United States should be proud of.

However, as a matter of fact, when Gen. Carranza, who was at the head of the revolutionary movement, became aware of what Huerta was attempting to do he made it publicly known to the nations of the world that if he should ever come into control of the Mexican Government, he would not recognize as bonds of the Mexican Republic the obligations which Gen. Huerta was attempting to incur. The bonds in question were an issue of $200,000,000 which had been approved by the Madero congress, to be sold abroad. These had never been issued by the Madero government, but their issue had been legalized by it. The minister of finance for the Huerta administration placed these bonds with a group of Paris bankers, under an option, which option was renewed and did not expire until the latter part of 1914, some months after Huerta had left Mexico. None of these bonds were ever sold, except that a certain American financial institution—Speyer & Co.—which held approximately $60,000,000 of Mexican Government obligations, made some arrangement with the Paris bankers, unloading the $60,000,000 on them, and this item is said to now be held as a charge against those bonds.

In the meantime Huerta exacted a forced loan of $50,000,000 from the banks of Mexico, informing each of the banks of the portion of this loan that they were expected to contribute, and informing them also that for the amount they were made to subscribe they would have a corresponding participation in the bonds held by the Paris bankers. The Bank of London and Mexico, doing business in Mexico City, had approximately 12,000,000 pesos, about $6,000,000, of the Paris bonds allotted to it. Huerta allowed the banks to have this supposed participation at a ratio of 80 per cent on the face value. Huerta had the amount of the participation of each of the banks printed as bank notes, with facsimile signatures; and while the banks are surety for the money so issued, they only had a promise for the bonds which they had never seen. However, each of the banks received a notice from the Huerta government of the amount of their participation in the Paris bonds. In the meantime, however, the Paris bankers, in attempting to place the bonds, had to contend with a soaring rate of exchange on Mexican money, which nullified their efforts. Then it was that Huerta made the demand on the Mexican bankers giving them the privilege of issuing bills at a ratio of one for one against the bonds.

The gentleman from Pennsylvania goes into a withering criticism of the embargoes placed on arms and ammunition into

Mexico, without taking into consideration the circumstances governing the points he thrusts forward. We are all well aware of the kaleidoscopic changes which have occurred in Mexico since November 20, 1910, when the Madero revolution began. We know with what uncertainty the former administration handled the Mexican situation—one moment breathing hot and the next cold. The Mexican situation since and before our own Civil War has been a perplexing question, and no one is as well situated to gauge the complexities better than the men who have occupied the presidential chair, for they are in a position to get quickly at the grain of the situation, while those who make spasmodic attempts to air their knowledge on the Mexican situation are merely wading blindly through a lot of chaff.

It is unfortunate that there is an inclination on the part of some persons to attempt to play politics at this particular time. We find that the administration is blamed for the landing of marines in Santo Domingo, when this is provided for by a treaty made in 1907, under a Republican administration.

We find, also, that this administration is charged with culpability because marines were landed under the Republican administration in the Republic of Nicaragua. We also find that because this administration took the only logical step in Haiti in 1915 to preserve the integrity of the Monroe doctrine, which has been defended by all parties for a century, that we are now doing the preposterous.

Later on in his speech the gentleman from Pennsylvania, in claiming that arms were sent to Tampico on various vessels, cites the case of the *Antilla*, which landed ammunition at Tampico on June 12, 1914, and he says:

It is interesting to notice that just at this time the onward sweep of the Constitutionalist army had been checked. Carranza's general, Panfilo Natera, was short of ammunition and had failed in his attack on Zacatecas on June 10 to 13. It is said to have been a portion of this shipment that Villa used on June 23 in his successful attack on Zacatecas.

As a matter of fact, when Natera made his attack on Zacatecas, on June 10, with 6,000 men, that city, which is a natural stronghold, was defended by 10,000 trained soldiers, and the taking of Zacatecas by Natera's forces, even though he had had the output of all the ammunition factories in the United States, was an impossible feat. Gen. Carranza directed Gen. Villa to send 5,000 of his forces to Zacatecas to assist Natera in a renewed attack on that town. Villa, realizing the importance and the strength of the position, proceeded to Zacatecas from Torreon with his own ammunition and about 22,000 of his troops, making the total attacking force about 26,000, while the Federals, defending the city, had been reinforced and consisted of 13,000 men. The fighting began on Saturday, the 20th of June, and continued until late in the afternoon on the 23d, when Zacatecas was taken. There was not an ounce of the ammunition landed at Tampico used in the taking of Zacatecas.

In regard to the money collected by the American customs authorities in charge of Vera Cruz, the gentleman from Pennsylvania need have no anxiety. The amount, to be exact, is 2,604,051.20 Mexican pesos, and it is now in the custody of the Treasury Department of the United States for the accounting of the Mexican Government.

The gentleman speaks of "the unprecedented bloodshed and anarchy in Mexico was precisely what many advisers had foretold would be the result of President Wilson's policy." He is mistaken when he mentioned the conditions in Mexico as unprecedented, because for several years previous to 1859 Mexico was torn by a series of interior revolutions which were even greater than that in the present revolution.

A reference to Mexican history of this time will bear me out. On April 7, 1859, Minister McLane recognized the government of President Juarez as a de facto government. In his dispatch of that date he indorsed the findings of Special Agent Churchwell, and, in part, said:

The government of President Juarez was the only government existing in Mexico that possessed any of the substantial elements of a de facto government, or that offered a reasonable prospect of stability—that it lacks much, in this latter aspect of the case, which is necessary to give full satisfaction to those with whom it may have to deal, it would be idle to deny.

On April 25, 1859, Secretary Cass, in an instruction to Minister McLane, in part, said:

Your course in acknowledging the government of President Juarez and your other proceedings are entirely approved.

The Hon. John W. Foster, who was American minister to Mexico during the administration of President Grant, and who, in a dispatch dated September 30, 1873, stated that the Mexican Congress had announced the ratification by a majority of the State legislatures of the laws of reform as additions and amendments to the Federal constitution, and that under date of September 25 "President Lerdo proclaimed them as embodied in that instrument. These laws were decreed by the liberal government at Vera Cruz in 1859, and since the overthrow of Maximilian in 1867 they have been enforced; but their present incorporation into the Federal constitution may be regarded as the crowning act of triumph of the liberal government."

In an instruction, dated October 22, 1873, replying to the above dispatch of Minister Foster, Secretary of State Fish wrote:

The Mexican Government deserves congratulations upon the adoption of the amendment of its constitution, to which the dispatch relates. It may be regarded as a great step in advance, especially for a Republic in name. We have had ample experience on the advantage of similar measures.

Upon the receipt of the communication from the Secretary of State, Minister Foster communicated the congratulations of this Government to President Lerdo, who was the immediate successor of Juarez.

It will be seen that while Juarez, and the principle for which he was fighting, was recognized by a Democratic administration in 1859, that four years later the liberal government of Mexico was congratulated by this Government, then under Republican administration, because of the final success of the principles for which the Juarez government stood in 1859.

President Buchanan sent an able representative in the person of Robert M. McLane to investigate the contest with authority in his discretion to recognize the liberal government, at the head of which was Juarez. The latter had been expelled from the capital and was found by Mr. McLane at Vera Cruz, where he established diplomatic relations with them and soon negotiated a treaty and convention, securing transit privileges across the Isthmus of Tehuantepec and an advantageous trade arrangement, in return for which the United States was to pay the liberal government $4,000,000, with half of which American claims were to be satisfied, the other half to be used for the restoration of the liberal government to power. It was virtually an alliance with one of the parties contending for supremacy in Mexico.

This entirely refutes the charges made by the gentleman from Pennsylvania against the present administration that "against all tradition, contrary to all precedent, it chose to reverse the established policy of the United States, and the result was disaster."

Since the gentleman from Pennsylvania criticizes the present administration for the loss of American life and property in Mexico, why does he not explain the killing of Americans and the destruction of American property in Mexico during the five years previous to March 4, 1913? On June 2, 1906, there were Americans killed and wounded, and during disturbances at Cananea, in the State of Sonora, and in this State alone, while President Roosevelt was in office, there were many Americans killed.

This, I think, fully answers every criticism by the distinguished gentleman from Pennsylvania, except the main proposition in his argument that the President was wrong in not recognizing Huerta.

I will give some reasons why no self-respecting government and no honest executive should have recognized the Huerta government.

One of Huerta's first acts was to arrest Abram Gonzales, governor of the State of Chihuahua, whom he knew to be an adherent of Madero. He put Gonzales on a train, supposedly to deport him across the border, but before the train had gone far Gonzales was taken out and killed in the most inhuman manner. He was tied on the railroad track and the yard engine slowly backed over him. Huerta's crimes at this time in having Maderistas killed were simply atrocious.

After Huerta became President he proceeded to govern Mexico as the military despot in a bloodthirsty way, having no regard for anything save the advancement of his political ambitions and serving the autocratic financial interests of those who were backing him.

The conditions became so intolerable that a Mexican senator—Belisario Dominguez—exercising his constitutional right, rose in his place in the senate and had put in the record the following protest:

[Sept. 13, 1913. Address of Belisario Dominguez, senator from the sovereign State of Chiapas to the Senate of the Republic of Mexico.]

Mr. President of the Senate, the matter being of urgent interest for the welfare of the country, I am compelled to set aside the usual formulas and to ask you please to begin this session by taking cognizance of this sheet and making it known at once to the honorable members of the Senate.

Gentlemen, you all have read with deep interest the message presented by Don Victoriano Huerta to the Congress of the Union on the 16th instant.

There is no doubt, gentlemen, that you, as well as myself, felt indignant in the face of the accumulation of falsities contained in that document. Whom does that message aim to deceive, gentlemen? The Congress of the Union? No, gentlemen; all its members are cultured persons who take an interest in politics, who are in touch with events in this country and who can not be deceived on the subject. Is it the Mexican nation that is to be deceived? Is it this noble country which, trusting in your honesty, has placed in your hands her most sacred interests? What must the National Assembly do in this case? It must

respond promptly to the trust and confidence of the nation which has honored this body with her representation, and it must let her know the truth and so prevent her falling into the abyss which is opening at her feet.

The truth is this: During the reign of Don Victoriano Huerta not only has nothing been done in favor of the pacification of the country, but the present condition of the Mexican Republic is infinitely worse than ever before. The revolution is spreading everywhere. Many nations, formerly good friends of Mexico, now refuse to recognize this government, since it is an illegal one. Our coin is depreciated, our credit in the throes of agony. The whole press of the Republic, either muzzled or shamelessly sold to the government, systematically conceals the truth. Our fields are abandoned. Many towns have been destroyed, and, lastly, famine and misery in all its forms threaten to spread throughout our unhappy country. What is the cause of such a wretched situation?

First, and above anything else, this condition is due to the fact that the Mexican people can not submit and yield to and accept as President of the Republic the soldier who snatched the power by means of a treason and whose first act on rising to the presidency was to assassinate in the most cowardly manner the President and Vice President legally consecrated by the popular vote, and the first of these two men, he who promoted and gave position to Don Victoriano Huerta and covered him with honors, was the man to whom Victoriano Huerta publicly swore loyalty and faithfulness.

In the second place, this situation is the result of the means adopted by Don Victoriano Huerta and which he has been employing in order to obtain the pacification of the country. You know what these means are—nothing but extermination, death for all the men, all the families, all the towns which do not sympathize with his government.

"Peace will be made at any cost whatever," said Don Victoriano Huerta. Have you studied, gentlemen, the terrible meaning of these words of the egotistical, ferocious man, Don Victoriano Huerta? They mean that he is ready to shed all the Mexican blood, to cover with corpses the whole surface of the national territory, to convert our country into one immense ruin, so that he may not leave the presidential chair nor shed a single drop of his own blood.

In his insane anxiety to keep the post of President, Victoriano Huerta is committing a new infamy. He is provoking an international conflict with the United States of America, a conflict in which, if it is to be solved by fighting, all surviving Mexicans would participate, giving stoically the last drop of their blood, giving their lives—all save Don Victoriano Huerta and Don Aureliano Blanquet, because these disgraced ones are stained with the blot of treason, and the nation and the army will repudiate them when the time comes.

It seems as if our ruin were unavoidable, for Don Victoriano Huerta has taken hold of power in such a way in order to insure the triumph of his candidacy to the Presidency of the Republic in the elections to be held October 26 that he has not hesitated to violate the sovereignty of the greater part of the States, deposing the legally elected constitutional governors and supplanting them with military governors, who will take good care to cheat the people by means of ridiculous and criminal farces.

However, gentlemen, a supreme effort might save everything. Let the National Assembly fulfill its duty and the nation is saved, and she will rise up and become greater, stronger, more beautiful than ever.

The National Assembly has the duty of deposing Don Victoriano Huerta from the Presidency. He is the one against whom our brothers up in arms in the north protest, and, consequently, he is the one least able to carry out the pacification which is the supreme desire of all Mexicans.

You will tell me, gentlemen, that the attempt is dangerous, for Don Victoriano Huerta is a bloodthirsty and ferocious soldier, who assassinates anyone who is an obstacle to his wishes; but this should not matter, gentlemen. The country exacts from you the fulfillment of a duty, though there is the risk, the certainty, that you will lose your lives.

If in your anxiety to see peace reigning again in the Republic you committed a mistake and put faith in the false words of the man who promised to pacify the Republic, to-day, when you see clearly that this man is an imposter, a wicked inept, who is fast pushing the nation toward ruin, will you, for fear of death, permit such a man to continue to wield power? Reflect, gentlemen, meditate, and reply to this query.

What would be said of those on a vessel who, during a violent storm on a treacherous sea, would appoint as pilot a butcher who had no nautical knowledge, who was on his first sea trip, and who had no other recommendation to the post than the fact of his having betrayed and assassinated the captain of the vessel?

Your duty is unalterable, ineludible, gentlemen, and the nation expects of you its fulfillment.

This first duty discharged, it will be easy for the National Assembly to fulfill others derived from it, asking all revolutionary chiefs to stop all active hostilities and to appoint their delegates in order that by general accord the President be elected who is to call for presidential elections, and who is to use care that these be carried out in all legality.

The world is looking on us, gentlemen, members of the National Assembly, and the nation hopes that you will honor her before the world, saving her from the shame of having as first magistrate a traitor and an assassin.

Dr. B. DOMINGUEZ,
*Senator for Chiapas.*

Immediately afterwards this senator suddenly and mysteriously disappeared, has never been heard of since, and is supposed to have been murdered.

Soon after the disappearance of Senator Dominguez the Chamber of Deputies of the Congress of Mexico passed the following resolution:

(1) That a commission formed of three deputies be appointed for the purpose of making all necessary investigations to find out where Senator Belisario Dominguez is, and that it be empowered with all the facilities which it deems necessary for the matter in hand. (2) That the Senate be invited to appoint a commission for the same object. (3) The commission of the Camara will propose what may be necessary in view of the result of the investigation. (4) That this motion be communicated to the executive, so that he may import whatever aid may be necessary to the commission or commissions, as the case may be, making known to him that the national representation places the lives of the deputies and senators under the protection of said executive, who has at his disposition the necessary elements to enforce the immunity which the constitution authorizes to those functionaries. (5) That said executive be informed that in case the disappearance of another deputy or senator occurs the national representation will be obliged to celebrate its session where it may find guarantees.

The next day, on October 10, a demand was received from Huerta for a reconsideration of these resolutions. The president of the Chamber of Deputies arose and adjourned the chamber, whereupon 110 deputies of the chamber were arrested by the soldiers of Huerta and sent to the penitentiary.

On November 13, 1913, 78 of these deputies were still in the penitentiary. The other 32 are supposed to have been murdered—at least they have never been heard from—and many of those who were not killed continued in the penitentiary until our Government occupied Vera Cruz, in April, 1914.

Mr. Speaker, these men were the constitutionally elected representatives of the people of Mexico, and their incarceration and murder demonstrates the kind of government Huerta was trying to foist upon the people of that unhappy country.

If our precedents call for the recognition as the head of a republican government of a usurper, a traitor, a murderer, and a military despot, then that precedent should have been changed, and one of the best things President Wilson has done during his administration was to change it. I congratulate the world that this country had a President who had the courage and patriotism to take the position President Wilson did, and I congratulate the Mexican people that neither this country, Argentina, Brazil, nor Chile recognized the military despot who had by bloody treason usurped the governing power of Mexico and was attempting to hold it by fraud.

If the Mexican situation is to be dealt with, it should not be done in a superficial manner, dealing solely with the events which have occurred during the present administration, but the whole situation should be analyzed from the time that Francisco Madero started his revolution, on November 20, 1910, when, in order to launch the project upon which his heart was set, he mortgaged his home in Monterey. The money so raised was the capital upon which he began the movement to overthrow a Government whose prestige was great, whose power had extended over a period of 30 years, whose credit was excellent, and which then had in its treasury over $60,000,000.

Madero came of a very wealthy family—a family whose wealth consisted of nearly 2,000,000 acres of land and of varied industries in the northern part of Mexico. His family, with the exception of one brother, thought him an idealist, and refused to help his cause in any manner whatsoever. But as the Madero campaign progressed this family found itself cut away from all its wealth by the Government, which seized and took control of all the vast Madero properties.

President Diaz had reached an age when he was no longer competent to rule the country. He made the mistake of waiting too long to select and train his successor, and finally when he did select one he made a greater mistake in choosing Ramon Corral, a man who was most unpopular. Diaz had become surrounded by a lot of personal friends, and this group came to be known as "cientificos." In various ways they wrung money from the country and from their less-fortunate brethren to fatten their own purses. Less than one-third of the standing army that Diaz thought he had really existed. The rest were on the pay roll, but the men were not in the ranks. That was one reason why Diaz realized that he could make no headway against the popular movement initiated by Madero.

The initiation of the movement by Madero soon caused him to be regarded as the savior of the people by the vast majority of the lower classes of Mexico. The hold that he had upon them lay in his simplicity of manner and his democracy. Madero had been educated in the United States, and he wished to model the administration of his country so that it would enjoy the same measure of liberty as is enjoyed in this country.

When this movement had its first impulse the American interests that had investments in Mexico endeavored to bring about American intervention. Whether that intervention was intended to nullify the revolutionary movement or whether it was intended to replace the Diaz government it is difficult to say; but the interests apparently felt that if this country would intervene their properties and investments would be very much better safeguarded. But there was another element at work—weaker in some respects, yet far more potent in others, than they.

In the early part of March, 1911, Limantour, the financial wizard of Mexico, landed in New York, returning from Paris to Mexico. There was probably no man better posted on political conditions in that country than Limantour. He had controlled the financial destinies of Mexico for so many years that he knew the weak points as well as the strong.

On the 12th of March, 1911, Limantour held a conference with Dr. Vasquez Gomez, head of the Madero revolutionary junta

in the United States, in the rooms of Ambassador Francisco de la Barra, at the Hotel Astor. Two days later he held another conference with Francisco Madero, sr., and his son Gustavo. At this latter meeting the reforms demanded by the revolutionists were explained to Limantour, and before the termination of the interview it was agreed that upon his return to Mexico City he would endeavor in every honorable way to bring about the naming of De la Barra as the provisional president, pending the free elections, and also to accomplish the adoption of the revolutionary principles. A few days later Limantour left for Mexico City, and shortly afterwards De la Barra was called from Washington, and upon the reorganization of the cabinet he was made secretary of foreign relations, which put him in direct line for the Presidency should Gen. Diaz resign.

On May 10 the Madero forces gained a bloodless victory at Juarez and occupied the place. Eleven days later an armistice was agreed upon at El Paso, in keeping with the arrangement made in New York; and on May 25 Diaz and Corral, President and Vice President of Mexico, resigned, and De la Berra became provisional president. Limantour had fulfilled his part of the agreement.

On June 3 Madero, who was then at the family home at Parras, in the State of Coahuila, left for Mexico City, a journey which usually takes about 30 hours. On this trip, however, the demonstrations given him all along the railway line were so great that it took four days to accomplish the journey. People came for miles to gather at the railway stations to cheer their uncrowned king. In Mexico City alone it was estimated that over a quarter of a million people from the outlying districts gathered to participate in the welcome to be given to the "Little Savior." Despite the fact that on the morning of his arrival at Mexico City that place had been visited by a serious earthquake shock, in which more than 200 persons lost their lives, the panic incidental to such an event was forgotten almost in a moment in the enthusiasm over the coming of Madero.

No sooner had Madero arrived in the capital than the aristocracy and the opposing political groups began to ridicule and to discredit him; but Madero, in his simplicity, would talk to the poor people who gathered in front of his home, or sometimes, while driving on the street, would speak a few words to groups that cheered him. There is no doubt that he was a popular idol; yet all the forces of the aristocratic element were conspiring against him.

On November 6, 1911, he took the oath of office.

Let us turn back again to 1910, when Henry Lane Wilson was sent as ambassador to Mexico City to replace David E. Thompson. He associated himself with a man named Judge R. L. Wilfley, who had served under the Republican administration in the Philippines and in China for eight years previously. Wilfley and Wilson became notoriously "thick." Thompson had been recalled because of a lot of undesirable publicity which was given to his railroad and banking deals in Mexico while ambassador. Wilfley and Wilson had a great many claims to present to the Madero government. Because some of these claims did not appertain to real American interests, President Madero could not understand the particular interest taken in them. A breach was thus created, and the American ambassador was thereafter openly hostile to the Madero administration, and particularly to Madero. Resentful of the treatment given him upon the presentation of some claims, Ambassador Wilson joined the forces in Mexico City that were hostile to Madero, and toward the close of February, 1911, he visited Washington to ask that troops be sent to Mexico to protect American interests. He brought with him a petition, signed by a number of the members of the American colony who were friendly to him, to support his pretensions. Before Wilson reached Washington, however, the larger element of the American colony in Mexico City telegraphed its opposition to such a measure as the one proposed by him. He, however, convinced the administration of the correctness of his position, and in the following month 20,000 troops were sent to the border.

Throughout the succeeding year the tension between the ambassador and President Madero became greater; and again, in the early part of 1912, the ambassador convinced the Taft administration that troops should be held in readiness, with the result that an order was issued in the early part of February, 1912, to hold all troops in readiness for service along the Mexican border. Both of these orders created a situation in Mexico which made some of the people doubt the stability of the Government. Consequently, the lawless element made itself felt in the operations of groups of bandits all over the country. Madero about this time began a vigorous campaign against this outlawry and succeeded in convincing the people that he was stronger than they thought him to be. On February 24, 1912, the Washington authorities hinted to the Mexican authorities that military force was contemplated, and on March 2 of the same year warning was sent to the ambassador in Mexico City that he advise Americans to leave affected districts, but the ambassador applied this warning to practically the entire Republic.

Madero, struggling with a great reform movement against a host who did not relish being thrown out of power after 30 years at the fleshpots, had to contend with the pessimism of this Government, brought about by the representations of Ambassador Wilson, and the menacing moves made from time to time with the apparent purpose of making his task impossible. If the Republican administration had given Madero one-tenth part—yes, even one-hundredth part—of the support and assistance that this Government is giving the de facto government of Gen. Carranza, Madero would have been successful in establishing peace and order, the crime of Huerta would not have been committed, the loss of American lives and property since that time would not have occurred, and Mexico would have been spared the horrors of the fratricidal war which has since prevailed there.

In May Senator LODGE made his famous Magdalena Bay speech, which aroused resentment throughout Mexico. In that same month the administration, for the benefit of the special representatives of Dr. Vasquez and Orozco, who were then in Washington conspiring against Madero, stated that "until more headway was made in unseating Madero" no interviews would be granted and no communications received from the insurgents. It seemed that the administration had devoted itself to a campaign of nagging and persecuting the struggling government of Madero. This same attitude continued, and during the early part of September President Taft stated to Ambassador Calero that this Government was dissatisfied with internal conditions in Mexico. The newspaper in reporting the matter said:

> Mr. Taft is opposed to intervention, except as last resort. It is admitted, however, that conditions in Mexico have become much worse in the last few weeks, and if the Madero government is unable to check the attacks on American citizens the United States will be constrained to take some action.

On the 17th of that month Ambassador Wilson presented a lengthy and brusque note to the Mexican foreign office.

Wilson was called to Washington in December, 1912, and the Madero government, realizing that as long as the Washington administration had only the views of Ambassador Wilson, the chances for Mexico were reduced to the minimum, sent Pedro Lascurrain, minister of foreign affairs, to hold a conference with President Taft and Secretary Knox. This conference was held on January 2, 1913. Then for the first time the Republican administration appeared to understand the Mexican situation and to be more reasonable and friendly in its attitude toward the Madero government. But, unfortunately, the work of the enemies of Madero in Mexico City and the attitude of the Washington Government toward Mexico had enabled the plotters conspiring against Madero to perfect all their plans, and on February 9, 1913, the conspiracy developed into armed action. After Gen. Villar was wounded in the first attack on the palace Victoriano Huerta was put in command of the Federal troops.

On February 18, 1913, Madero was arrested with all his cabinet, as well as his brother Gustavo, and on that night a document was drawn up and signed by Huerta and Felix Diaz at the American Embassy. On the same night Gustavo Madero and Adolfo Basso were shot. On February 19 President Madero and Vice President Suarez were forced under penalty of death to resign, and on the night of February 22 President Madero and Pino Suarez were murdered.

In a few hours Huerta became President.

About the time of the killing of Madero the Republican administration placed 9,000 troops along the border and sent four battleships to Mexican waters.

Had Ambassador Wilson been governed by the motive which should have been possessed by one in his high position the killing of Madero could have been avoided, even after his arrest. Had he shown the sense of humanity demonstrated by the Cuban minister, Marquez Sterling, his conscience certainly would have been very much clearer. The Cuban minister was deeply outraged, as were some of the other Latin-American ministers, at the conduct of the dean of the diplomatic corps, the American ambassador. During all the time of Madero's imprisonment Marquez Sterling was devoted in his attendance upon him, and did everything in his power to save Madero's life. For several nights he remained with Madero, and when food and coffee were brought in, and Madero, fearing poison, hesitated to taste them, the Cuban minister took the initiative, in order to remove Madero's suspicions. This good man proved a great comfort to the bereaved family of Madero after the latter had been killed, and he cabled to his Government and

had one of the Cuban war vessels meet the Madero party at Vera Cruz, whence he escorted them on the vessel to the Cuban capital, refusing to serve any longer in Mexico near a government whose head was so atrocious a character. Upon his return to Cuba the minister published a series of articles in which he severely criticized Ambassador Wilson for the active part he had taken in attempting to foist the Huerta régime on the Mexican people and to bring about its recognition by foreign powers.

On the evening of Washington's birthday Gen. Huerta and the American ambassador dined together. About the time they were doing this President Madero and Pino Suarez were shot. A few days later Ambassador Wilson telegraphed to Consul Hostetter, of Hermosillo, urging him to use his influence with the governor of that State to the end that he declare his allegiance to Huerta. Wilson informed Hostetter that all the other States had done so. Hostetter is said to have consulted with the officials and to have telegraphed to Ambassador Wilson asking him to enumerate the States that had declared allegiance to Huerta. Hostetter received no answer to his telegram. Ambassador Wilson did not confine his efforts to employing the American consular corps in Mexican politics in favor of Huerta, but telegraphed to other consuls, urging them to use their influence to get the State authorities to declare in favor of Huerta.

Even had Huerta achieved power in a more regular manner his recognition by the United States Government would have been a matter of very grave consideration, because his control of northern Mexico was very limited on account of the particularly strong Madero sentiment which prevailed in that section of the country, wherein were located the greatest American interests in Mexico, and the recognition of Huerta would have caused such a wave of indignation throughout this section that the sacrifice of the vast American interests there would have been almost certain.

President Wilson had closely followed the trend of the Mexican revolution from its inception by Francisco Madero, and had witnessed the triumph of that movement which was so popular that even though it had no financial backing it overwhelmed the great government of Porfirio Diaz. At the time that Madero captured Juarez the revolutionary fund had dwindled down to less than $10,000, with little hope of its coffers being replenished. The weakness of the financial end of the Madero revolution was the best proof of the popularity of the cause.

The Madero revolution triumphed in spite of the many difficulties which surrounded it. That triumph, when we take into consideration all the facts of the case, made the very evident unfriendliness of this great country toward the Madero government a stupendous international injustice; and it appears that the assumption of power by the Democratic Party has given it the means of making restitution for that unfairness and unfriendliness toward a people struggling for the same measure of liberty that we enjoy in this country. The Republican Party held its hands out to the Madero government, thumbs down, in a manner calculated to drown or suffocate it. The Democratic Party has held its hands out to a continuance of the Madero revolution, palms up, as an act to assist it to accomplish the revolutionary ideals and to bring to Mexico a great and lasting peace. Then came the Tampico incident, where Huerta flouted the United States Government, insulted its flag and imprisoned its officers. This incident ended in the occupation of Vera Cruz by the American forces, and this in turn brought about the downfall of Huerta, which was just retribution.

The Madero sentiment throughout Mexico could never have been crushed by Huerta. It might have been suffocated for the time being by some powerful man with immediate and immense resources at his hand, but it could never have been extinguished altogether. The Madero ideal, as it was called, had become the watchword, and the love felt by the great element of the common people of Mexico for the idealist was too great for any usurper to found a government upon the ruins of that ideal. This was shown very plainly in the immediate activities of the revolutionists against Huerta as soon as he sent out his telegram to the governors of the various States announcing that he had assumed the executive power. Bands of revolutionists sprang up all over the country, and all of them gradually rallied to the standard of Gen. Venustiano Carranza—whom they hailed as first chief—in the north or to the standard of Zapata in the south. Gen. Carranza began his revolution against Huerta in his native State of Coahuila; he then went to Sonora, where he established his headquarters and formed his government; and the campaign there started, together with the propaganda begun by his agents throughout the country, soon had Mexico aflame with the spirit of the dead President Madero.

The Republican candidate for the Presidency criticized the administration in regard to its Mexican policy, but his criticisms, like all other criticisms, are general in their character, except that he, like the other Republicans, seems to think that Huerta should have been recognized.

A great writer in Virginia says:

He makes much ado because we went into Vera Cruz and left again after Huerta had eliminated himself under Carranza, Villa, and American pressure.

Surely we left; we were not at war with Mexico; we got out just as quickly as we could, just like we will do now as soon as Villa's wings and spurs have been properly clipped.

Justice Hughes is going to find it hard to get to the White House by way of Mexico.

The New Republic, in discussing Mr. Hughes's acceptance speech, says:

When he looked forward into the future he fell into pious words and utter vagueness. Though he devoted 30 minutes of his speech to Mexico no one knows to-day what his Mexican policy would be. "It would be firm and friendly," he said, but we are none the wiser. He devoted about 10 minutes to the European war, said our isolation was ended, and never indicated even in the barest outline the nature of the foreign policy which is to supplant isolation. He spoke of the economic struggle after the war, and the only specific item he offered was a good, old-fashioned protective tariff. The real economic problem which peace will bring, the problem of a world divided into economic alliances, the most portentous problem of our own and the world's future, he, the man who would have to deal with it, never even mentioned.

Great is efficiency and firmness is a necessary virtue, but others have been both efficient and firm, yet they have not necessarily been wise. A statesman asking us to place with him the great trust of the Presidency must do more than tell us he would do well whatever he did. He must give some hint, at least, of what he would do so well.

Mr. Hughes's attempt to discredit the foreign policies of the American Government is about the most discreditable incident in his whole career.

America at peace, prosperous as no country ever was before, envied of the nations, the hope of the distracted world, rich beyond the dream of avarice, the world's Samson in potential elements of national strength, is a living, throbbing, virile refutation of Mr. Hughes's half-baked charges.

American diplomacy, frank, open, possibly blunt when bluntness was necessary, has achieved victories which millions of lives and countless treasure have not been able to win in Europe.

Mr. Hughes is endeavoring to follow the Roosevelt ideas without the Roosevelt utter disregard of consequences. Hughes talks of firmness, Roosevelt of war; Hughes is policyless, Roosevelt is for blood; Hughes faintly echoes the Roosevelt cry that had we been firm at the outset, there would have been no *Lusitania* tragedy, Roosevelt says that we ought to have started our part of the blood letting when Germany invaded Belgium; Hughes deals in glittering generalities, his mentor in gore.

America has pinned its faith to President Wilson, the man whose sound common sense and broad patriotism has saved the day, when another would have plunged us headlong into the abyss of war and death.

### A Message to the Young Men.

The country calls the young voters to service and leadership.
It is the privilege and the duty of the young men to stand with the party that guarantees equality of opportunity.
The young men of to-day are the leaders of to-morrow.
Now is the time for action.
The future belongs to the young man through the Democratic Party.

## EXTENSION OF REMARKS

OF

## HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. RAKER. Mr. Speaker, the election of a Democratic President and a Democratic Congress four years ago was brought about mainly by the earnest effort of the young men of this country who felt that their only hope of equal opportunity was to be found in the Democratic Party. Under the rule of the Republican Party the upward road that has always been open to our young men was being blocked, both in business and in politics. But the youth of America arose to a realization of their power and put out of control of the Government the bosses who had so arrogantly closed the door against them.

The natural place for young men is the Democratic Party, whose purpose is to keep the road to opportunity open. The

Republican Party, standing for trusts, monopolies, and narrowing opportunity, is not the natural home of the vigorous, intelligent, ambitious, manly young men who ask only a free hand and a fair chance. Turn the country over to the unchecked rule of the Republican Party again and the average young man can only hope to be a clerk in the ranks of monopolies, and if he is an exceptionally able man he may hope to rise to be a head clerk. But that is all. Corporate organizations and wealth are clutching into their deadly grip the opportunity of a once free land. If the men of to-day would bequeath a heritage of freedom and opportunity to their sons, they must enlist in the fight now. The Democratic Party stands for the open road. It believes that the people can and should govern themselves. It believes that America needs only a fair field and an even chance, and for that it will die in the last ditch. It is the standard for the young men to enlist under, and it depends upon them to take their places and to do their duty.

THE TRUMPET CALL TO DUTY.

Our great country is enjoying unprecedented prosperity, and is throbbing with possibilities. We must keep these possibilities open for our young men. We are setting about the task of building up a great modern Nation, and to-day we are leading the world in exports, manufactures and other business enterprises. Old things are passing away and a new order of things is being established. The illustrious heroes of the past have bequeathed us a marvelous heritage, and the young men of America must preserve this priceless gift, and see that it will be handed to the generations to come untarnished and unsullied. The Democratic Party has accepted the responsibility. It honors the past with all its glory, it acts in the present, and it safeguards the future. It stands for equal rights, and it guarantees an equal chance. It will build schoolhouses where jails were once needed. It will give a marvelous impetus to agriculture and increased commerce, its handmaid. It stands for progress, growth, and development, and a glorious to-morrow, with happiness and prosperity for all. It guarantees a Government where peace and justice will reign, where men will prefer light to darkness, where every man, woman, and child will have the opportunity to make the best of himself.

The Democratic Party calls on the young men of America to carry this work on. It is a call to duty and a call to arms, fame, and usefulness. The great men of the world have been those who bestowed something on mankind. In this great, new, formative period the young men must take their places and control the forces that are shaping the future. Will they control or be controlled? Will they keep the reins of power in their own hands or turn them over to centralization, to men who believe that power and wealth and opportunity should be limited to a few?

COUNTRY HAS EMBRACED PRINCIPLES OF DEMOCRACY.

The entire country has embraced the principles of Democracy. Its fires have been kept burning in peaceful and quiet homes all over the land with purity and vigor, and behold a conflagration is sweeping the country. The vestal flame has been kindled anew in the land. The people of the great West are adding fuel to it, and the people of the East and New England are more than contributing their share. The Democratic Party has come into its own because it has been true to principle and itself. Trust-controlled protection has been found to mean privilege, and privilege has no place in America. This great truth has been held sacred by the Democracy, and the people know that the load placed upon their backs by the Republican Party has been greatly lightened by this administration.

The Republican Party can no longer be held together by the "cohesive power of public plunder," and it is disintegrating from within. It cries in vain to the young men of the land, for it has nothing to offer them. Where Democracy is giving bread, Republicanism endeavors to entice the people with stones; where Democracy is a crystal spring, Republicanism is a stagnant pool. Democracy is the party of progress.

BE A LEADER.

To the young men I would say, you must be prepared to take part in public life. Practical politics is government in action. Government is a vital thing in a country of freedom. The public business is your business and mine. You young men of to-day will be the campaigners, leaders, and the governors of to-morrow. Stand for something, and know what that something is. The Republican Party asks you to be an office seeker; the Democratic Party says make yourselves worthy to hold office and the people will bestow it upon you. They have done so in the past.

The records of the Democratic Party are replete with instances where young men of worth have been called to positions of honor and responsibility.

YOUNG DEMOCRATS HAVE BEEN CALLED TO LEADERSHIP.

Joseph W. Folk, now chief counsel of the Interstate Commerce Commission, was elected governor of Missouri at 34; William Jennings Bryan, the youngest man ever nominated for President of the United States, was only 36 when nominated by the Democrats; HOKE SMITH was appointed Secretary of the Interior in President Cleveland's Cabinet at 37; James H. Higgins was elected governor of Rhode Island at 30—served two terms; Richmond P. Hobson sunk the *Merrimac* in Santiago Harbor when only 28 and has since been elected by the Democrats to Congress; United States Senator JAMES D. PHELAN was only 35 when he was elected Mayor of San Francisco; George B. McClellan was elected mayor of New York at 37; Alva Adams was elected governor of Colorado at 37.

Thomas M. Waller was only 30 when chosen secretary of state of Connecticut; Wilkinson Call was elected United States Senator from Florida at 31; William D. Bloxham was elected governor of Florida at 35; Adlai E. Stevenson, late Vice President of the United States, began his political career at 25; Grover Cleveland, elected President of the United States at 47, began his career as district attorney at 26; JAMES HAMILTON LEWIS, now United States Senator from Illinois, was nominated as a candidate for governor at 26; David R. Francis, now ambassador of the United States to Russia, was elected mayor of St. Louis at 34, governor of Missouri at 38, and appointed Secretary of the Interior at 45; David B. Hill was elected governor of New York at 41; John F. Fitzgerald was elected mayor of Boston at 30; Don M. Dickinson was appointed Postmaster General of the United States at 41; Josiah Quincy was appointed Secretary of State, United States, at 34; United States Senator KERN, from Indiana, began his political career at 35; William E. Russell was governor of Massachusetts at 31; United States Senator BECKHAM was elected governor of Kentucky at 35; Robert Love Taylor was elected to Congress at 28 and governor of Tennessee at 36; William Hensel was attorney general of Pennsylvania at 40; Henry D. Harlan was elected chief justice of the Supreme Court of Maryland at 30; Newton D. Baker, now Secretary of War, was elected city solicitor of Cleveland, Ohio, at 32 and mayor at 39; United States Senator LUKE LEA was elected at the age of 32 by the Democrats of Tennessee, and United States Senator GORE, from Oklahoma, at 37; United States Senator CHARLES A. CULBERSON, who has just been renominated as Senator from Texas over former Gov. Colquitt, was elected attorney general at 35 and governor of Texas at 39; United States Senator HENRY F. ASHURST was elected by the Democrats of Arizona to the United States Senate at 35 years of age.

History is full of the names of thousands of young men who have been elected as Democratic governors, United States Senators, Members of Congress and legislatures, mayors of cities, or appointed to positions of trust, honor, and responsibility.

William Pitt the younger was chosen premier of Great Britain at the age of 23; Napoleon Bonaparte when but 27 won his famous Italian campaign by the means of the most brilliant and daring military tactics of modern times; Alexander the Great was in his grave at 34.

Verily this is the day of young men. The Democratic Party calls you to its work and its honors.

DEMOCRATIC VICTORY SURE.

Every Democrat in the land is proud of the administration of foreign and domestic affairs by this great Democratic Congress and its great leader. The Democratic Party is no longer a party of promise, but goes before the electorate as a party of performance and wonderful achievement. It is proud of its record, and every Democrat is confident of success, and all the signs of the times point unmistakably to Democratic victory in the battle of ballots this fall.

Do you realize what this will mean to thousands of young men of vigor, energy, and ambition? It will mean the opening of thousands of avenues to opportunity, fame, honor, and usefulness. Are you going to cast your lot with those who, when in power, created a system of trusts and monopolies and destroyed hope or will you act with those who corrected the wrongs of plutocracy and reestablished the maxims of American liberty in all their regnant beauty and practical effectiveness, and whose record, like the path of the just, is as "the light that shineth more and more unto the perfect day."

It is into the ranks of this great, glorious, and militant party, whose history is full of magnificent achievements and inspiration for the young men, that we invite you and your friends to come and share with us in labors and in triumph.

DEMOCRATIC NATIONAL BUREAU OF POLITICAL ORGANIZATIONS AND CLUBS.

The ——— (give name or title of your organization) of ——— (give location), organized ——— (date of organization), having ——— members, approving the plans and purposes of the Democratic National Bureau of Political Organizations and Clubs, hereby makes application for enrollment as a member of the same.

The headquarters of our organization are located at ———(location).
The following are the officers of our organization: President ———, address ———; vice president ———, address ———; secretary ———, address ———; treasurer ———, address ———; other officers ———.

Remarks: (Under remarks please give brief history of your organization, its condition, etc. State whether or not the club is equipped for marching purposes or whether it be organized for marching purposes to escort speakers and work up enthusiasm for public gatherings.)

Respectfully submitted.

———, *President.*
———, *Secretary.*

NOTE.—Please fill this blank out (on typewriter if possible) and forward immediately to.

FRED. B. LYNCH,
*Chairman Democratic National Bureau of Political Organizations and Clubs,*
*30 East Forty-second Street, New York City.*

A CALL FOR VOLUNTEERS.

Wanted—an army of a million. Not a million men armed with rifles, but a million men armed with the determination to win a victory for Democratic principles. That is the army to be recruited and that is the campaign to be waged if success is to be won in November. It must be a campaign of education and organization—education along Democratic lines and organization of the forces that realize the necessity of concerted action against the selfish interests that have so long dominated political affairs. The Democratic Congress and Democracy's great leader have driven them from the seat of government, but vigilance is the price of liberty, and we must see that their defeat is a sure one.

Do you want to enlist in this army of a million volunteers and do your part in the great work? The Democratic national bureau of political organizations and clubs is now waging a campaign of organization, education, and agitation. We aim to make it one of the most comprehensive educational-publicity campaigns ever undertaken for the upbuilding of the Democratic Party. To make this campaign successful the Democratic national bureau of political organizations and clubs needs the assistance of 1,000,000 earnest workers. We want and must have your cooperation and support.

Will you enlist? Will you become a recruiting officer, trying to enlist others? Will you help organize this army of 1,000,000 to wage a strong and winning battle for the triumph of Democratic principles? Victories, both of war and peace, are not the results of chance, they are the result of organization, of careful planning, of thorough equipment, and concerted action.

The lines of the campaign of 1916 have been formed. The skirmishers have been ordered forward. As they advance, let the work of organization be pushed, to the end that when the battle opens the forces of Democracy may be prepared for a general advance, well organized, well planned, and well equipped

A million earnest men are needed to take hold and help with this great campaign. If you will be one, prevail upon as many others as you can to enlist.

Cut off, sign, and return the enrollment blank below for your own membership. Or, better still, send in a request asking for a number of enrollment blanks, and they will be forwarded promptly, enabling you to give your friends and neighbors an opportunity to join in the work of building up the "army of a million volunteers," and to secure copies of the official publications of the bureau and other interesting and instructive literature from time to time.

FRED. B. LYNCH,
*Chairman Democratic National Bureau of Political Organizations and Clubs.*
*30 East Forty-second Street, New York City.*

THE VOLUNTEER ARMY OF 1916—ENROLLMENT BLANK.

DEMOCRATIC NATIONAL BUREAU OF POLITICAL ORGANIZATIONS AND CLUBS,
*New York City, ———1916.*

Please enroll my name as a member of the volunteer army of 1916.

I agree to assist in the organization of Democratic clubs and first voters' organizations in this district, distribute such campaign literature as may be sent me from time to time, and pledge my assistance in bringing success to Democratic policies in State and Nation.

I further pledge myself to secure at least one additional member of the league and help increase its membership.

I inclose $———— as a voluntary contribution to help defray the expenses of the campaign conducted by the bureau.

Name ———— Post office———— County———— State———
Street address————

All contributions, whether 25 cents, 50 cents, $1, or more, will be greatly appreciated and promptly acknowledged. If you do not feel able to make any contributions, do not let that hinder you from enrolling now; we want your hearty cooperation and loyal support in this great movement. We want workers as well as funds.

Make all checks, money orders, etc., payable to the order of

FRED. B. LYNCH,
*Chairman Democratic National Bureau of Political Organizations and Clubs, New York City.*

## Rural Mail Service.

## EXTENSION OF REMARKS

OF

## HON. CHARLES A. KENNEDY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. KENNEDY of Iowa. Mr. Speaker, the Postmaster General, in his annual report for 1915, made the statement that this administration up to the end of the fiscal year of 1915 had added 6,000 new routes and extensions to the Rural Mail Service. The Democratic platform for 1916 states that 10,000 routes and extensions have been established during the present administration. With a view to securing accurate information on the subject, on August 11 I addressed a letter to the Fourth Assistant Postmaster General asking how many routes had been established in each State from January 1, 1915, to August 1, 1916, and how many routes had been discontinued in each State during that period. Up to the present time I have not been able to secure the information asked for. About a week after I requested this data, I was called on the telephone and told that the department was unable to furnish same because they did not have it. I called attention to the statement made by the Postmaster General above referred to and suggested that it seemed strange that they had carried on a comprehensive scheme of reorganization and yet had no record of what had been accomplished. Later in the day I was called again on the phone and told that the information would be furnished me. However, on August 22, some two weeks after I made the request, I received the following letter from the Fourth Assistant Postmaster General:

AUGUST 22, 1916.

Hon. C. A. KENNEDY,
*House of Representatives.*

MY DEAR MR. KENNEDY: Referring to your letter of the 11th instant, requesting that you be furnished a statement showing the number of routes established and the number discontinued during the period from January 1, 1915, to July 31, 1916, I beg leave to advise you that the information you desire will be furnished as soon as the condition of the work in this bureau will permit. The volume of statistical information desired is unusually heavy at the present time.

Believe me to be, sincerely, yours,

JAMES I. BLAKSLEE,
*Fourth Assistant Postmaster General.*

It is evident from the contents of this letter that they do not intend to comply with my request; at least, during the present session of Congress. Why should they hesitate to furnish the information? The fact is the above statements regarding the rural mail service are misleading. If it were possible to secure the facts, they would show that in Iowa, between June 1 and December 1, 1915, from 15 to 25 per cent of the routes were discontinued, and those remaining were extended and lengthened so as to cover the territory served by the routes discontinued. This action resulted in materially decreasing the number of routes in the State. The result was scores of the patrons who had been receiving their mail at their door these many years were compelled to travel a long distance to the route.

Petitions of protest were filed from all the counties I represent. In some cases these petitions were signed by every patron on the route that had been discontinued, protesting against the action that had been taken. So numerous and pronounced were these complaints it seemed that none of those affected were satisfied with the changes ordered.

It will be remembered that this reorganization scheme was carried out here in Washington without any field inspection to ascertain the condition of the roads and without any effort to determine various conditions that affect the efficiency of the service. In six or seven places in the district I represent routes were mapped out over reaches of road that did not exist at the time. In fact, in some cases carriers were directed to travel where there had never been roads, yet the Post Office Department claimed a very careful investigation was made before these changes were ordered. They paid no attention to the facilities for getting mail into a town from whence a route started, and gave no consideration to the question of dispatching the mail from the post office the same day it was brought in from the route.

Routes in some cases were discontinued at points where daily papers from various cities could go on the routes the same day they were published, and these patrons transferred to routes where no daily paper of any description could be received the day it is issued. Does this look like any investigation was made before these changes were ordered?

At another point in the district a 23-mile route, covering a very rough country, was extended by adding 9½ miles of the worst road in the county. The carrier made every effort to render satisfactory service, but when the roads broke up in the fall and winter it was absolutely impossible for him to get over his route before 8 o'clock at night, and it was frequently much later before he could leave the office for home. When the postmaster advised the department that it was impossible to cover this route when the roads were bad, on account of it being hilly and entirely too long, the department responded that the attention of the authorities should be called to the condition of the roads, and if they were not attended to and put in proper condition service on the route would be discontinued. I presented statements from various parties on the route to the effect that it was an utter impossibility to travel 32½ miles, which was the length of this route, during the period of the year when the roads were bad. On the strength of these statements the route

was restored to its former length. I do not believe that this case bears out the contention of the department that a very careful investigation of conditions was made in each county before routes were lengthened or cut out.

When it was announced that several routes in two of my counties would be discontinued on June 15, 1915, the many protests that came to me were filed with the Fourth Assistant Postmaster General. In response to these protests he insisted that the changes proposed would not curtail the service and no patron would be seriously inconvenienced as a result of the reorganization. The following letter from a point where a route was cut out shows that patrons were not only inconvenienced but discloses the fact that the service was almost destroyed:

CRAWFORDSVILLE, IOWA, *December 18, 1915.*

Hon. C. A. KENNEDY, M. C.,
*Washington, D. C.*

DEAR SIR: In answer to yours of the 9th will say that 61 patrons will be compelled to go a greater distance to their mail boxes than formerly, and that 47 patrons who formerly had their mail delivered at their residence will be compelled to go from 80 rods to 1¼ miles to their mail boxes each day in order to get their mail. And there will be 7 patrons who will get their mail delivered at their residences who formerly had to go from 20 rods to one-half mile for their mail.

The service in the past has been so satisfactory and agreeable to all that we wish to declare emphatically that the disadvantages to the public to be served so outweigh the advantages that we can not but feel that the change is detrimental to the greater number.

Yours, truly,

T. E. MAXWELL.

Protests became so numerous that when I returned to Washington in December I urged an inspection of each county in the district with a view to having such changes made and routes restored as would bring the service up to its former efficiency. The reports are in for all counties. I want to quote from a letter written by the Fourth Assistant Postmaster General setting out the effect of the changes recommended by the inspector in Jefferson County:

According to data furnished by the inspector, the changes proposed would benefit 287 families, while only 98 of the present patrons will be inconvenienced and none of these will be unreasonably remote from the route as changed. It is believed, therefore, that these amendments will materially improve the efficiency of the service and prove to be in the interest of the majority of the families affected.

Could there be any stronger condemnation of the paper reorganization that was put into operation by the department? It will be remembered that the statement that 287 families would be benefited and 98 inconvenienced was based on the service after the reorganization plan had been put into effect. Everybody was satisfied before that time, and the fact that they have improved the service, according to the report of the inspector, to 287 families, inconvenienced or cut off the route by the readjustment, shows that the patrons in that territory had ample ground for the complaints filed when routes were cut out, and those remaining lengthened to an extent that prevented good service being rendered. At one point in this county the service has been changed on a part of the route four times since the 15th of last November, and there is an investigation on at present with a view to making further changes. These were made except in one case without an inspection.

The inspector making the investigation in the various counties in my district recommended the restoration of some of the routes that had been discontinued. He also advised a rearrangement that would reduce the length of the routes that were extended last year so that carriers could cover them during all seasons of the year. There are, however, scores of patrons who must still travel a long distance for their mail who are demanding better service. The groundwork for poor service was laid when the department issued an order before starting to demoralize the service to the effect that in the future patrons who lived within a mile of the route would be counted as served. Prior to that time a patron was not considered served if he lived more than half a mile from the route. By cutting out part of the routes it necessarily follows that patrons in most cases must travel a greater distance for their mail. The surprising thing about the reorganization scheme was that a wholesale discontinuance of routes was only tried in a few strong Republican States in the North, where the administration could look for no support in the coming election, and in a few Southern States, where wagon routes were consolidated in the motor routes. Close States like Indiana, Missouri, and Nebraska were not touched, evidently because they did not want to start anything in those States at that time.

Mr. Speaker, the Rural Mail Service was started in 1896 and extended so that in 10 years there was complete county service in the district I represent. Not one of these routes was established until an inspector had personally visited every part of the road to be traveled and reported to the department in favor of its establishment.

In administering the Rural Mail Service before the present administration came into power no change in any established route would be made except on the recommendation of an inspector after a personal investigation had been made, and no change would be recommended if it worked adversely to those already receiving mail on the route. The whole tendency of changes that were made was to increase the efficiency of the service.

While patrons have every reason to complain of the treatment received at the hands of the department, the carriers also have reason to protest at the treatment accorded them. The Postmaster General, in his annual report for the fiscal year of 1915, has this to say about the transfer of carriers where they have been separated from the service by reason of the discontinuance of their routes:

When possible every carrier thus affected is being offered a transfer to some other route and vacancies occurring in the ordinary course are being held open for the men necessarily dropped in the readjustment.

The policy announced in the above statement has not been carried out and I do not believe it was ever intended to be. There were six routes discontinued in one of my counties and the carriers separated from the service. Some of these routes were later restored, but new carriers were appointed and the claims of old carriers, some of whom had grown old in the service, were ignored. These carriers had quite an investment in equipment, which is almost a total loss.

Congress has always been liberal in appropriating money to carry on this service with the hope that every effort would be made to give the rural population good mail service. It was announced that the reorganization of the service was to be carried on in the interest of economy, and the Postmaster General in his annual report for 1915 boasts of having an unexpended balance of $3,150,000, which was appropriated for this service and was turned back into the Treasury.

The farmers of the country in common with all other classes believe in the economical administration of governmental affairs, but they do not believe in that measure of economy that destroys efficiency as has been the case with the rural mail service. Those living on routes can not understand why they should be the victims of the only effort put forth by this administration to cut expenses.

Unless I mistake the temper of these people they will register their protests on November 7 against a policy that has curtailed a service that means more to them than any other Government activity in their behalf.

---

## The Legal Status of the National Guard Under the Army Reorganization Bill.

### EXTENSION OF REMARKS
OF
### HON. BURNETT M. CHIPERFIELD,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. CHIPERFIELD. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I insert the speech made by me before the American Society of Military Law, a section of the American Bar Association, at the meeting of the American Bar Association, August 30, 1916, at Chicago, Ill. The speech is as follows:

THE LEGAL STATUS OF THE NATIONAL GUARD UNDER THE ARMY REORGANIZATION BILL.

Washington, from his distressing experience with untrained and unequipped troops in the Revolutionary War, framed and expressed that formula, ofttimes quoted and in this country almost unanimously disregarded, "In time of peace prepare for war." We glibly prate of the truth of this maxim and stupidly and fatly and sleepily pay no heed to it.

This country has never been prepared for war, and to-day is not prepared for strife.

In the past we have always had to pay dearly in life and treasure for our negligent attitude of unpreparedness.

In the first war with England we melted the statue of the king for bullets; in the War of 1812 we builded our vessels on the shores of the Lakes from timbers newly cut from the forest; in the Civil War we lacked for everything that troops would require; and in the War with Spain we sent our soldiers to certain death from disease in the slaughter camps of the South.

To-day, aside from the natural advance of ideas in connection with the science of war, we are but little better prepared to cope with a first-class power.

All this is closely related to my subject—"The legal status of the National Guard under the reorganization bill."

Not only must we prepare with men, guns, and munitions, but we must as well be prepared with laws to govern the assembling and induction into the forces of the United States of the troops which are not a part of the Regular Army.

If we fail then, the whole scheme of defense is endangered.

In the country to-day are found not to exceed 40,000 Regular troops available for service against any foreign foe. The only reserve to this mere handful of soldiers is the National Guard of the various States. I use the words National Guard in the same sense that they are used in section 58 of the Army reorganization bill, where it says:

> The National Guard shall consist of the regularly enlisted militia between the ages of 18 and 45, organized, armed, and equipped as hereafter provided, and of commissioned officers between the ages of 21 and 64 years.

It is of the legal status of this body of men, numbering at times from 100,000 to 175,000 men, that I desire to speak.

It requires no argument to establish the contention that it is of the highest importance to the Nation that the "legal status" of these men should be certain and definite, in order that the country may surely and without question have their service in the time of need, and that those composing the guard may know both the extent of their rights and the measure of their duty.

Gouverneur Morris, in a letter which he wrote to Moss Kent January 12, 1815, recognized the need for national control and regulation of the militia when he said:

> When in framing the Constitution we restricted so closely the power of government over our fellow citizens of the militia, it was not because we supposed there would ever be a Congress so mad as to attempt tyrannizing over the people or militia by the militia. The danger we meant chiefly to provide against was the hazarding of the national safety by a reliance on that expensive and inefficient force. An overweening vanity leads the fond many, each man against the conviction of his own heart, to believe, or affect to believe, that militia can beat veteran troops in the open field and even play of battle. This idle notion, fed by vaunting demagogues, alarmed us for our country when in the course of that time and chance, which happens to all, she should be at war with a great power.
>
> Those who during the Revolutionary storm had confidential acquaintance with the conduct of affairs knew well that to rely on militia was to lean on a broken reed. We knew also that to coop up in a camp those habituated to the freedom and comforts of social life, without subjecting them to the strict observation and severe control of officers regularly bred, would expose them to such fell disease that pestilence would make more havoc than the sword. We knew that when militia were of necessity called out, and nothing but necessity can justify the call, mercy as well as policy requires that they be led immediately to attack their foe. This gives them a tolerable chance; and when superior in number, possessing, as they must, a correct knowledge of the country, it is not improbable that their efforts may be crowned with success. To that end, nevertheless, it is proper to maintain in them a good opinion of themselves, for despondency is not the road to victory.
>
> But to rely on undisciplined, ill-officered men, though each were individually as brave as Cæsar, to resist the well-directed impulse of veterans is to act in defiance of reason and experience.

In years past, in a desultory kind of way, Congress has sought to provide some certainty as to the status of the National Guard by various enactments, but not much has been accomplished in this direction to this day.

The Dick bill provided for Federal aid in the training of the guard, for its better organization, and to some extent sought to establish a scheme for its incorporation into the national plan of defense.

It fell far short of accomplishing the purposes which it was intended to accomplish.

However, it was a step forward, and did some good. The law is still in force, so far as it is not abrogated by the Army reorganization bill, as are also other laws not repealed by implication by this last enactment.

Strange as it may seem, it is a matter of the utmost difficulty to say just what laws passed by Congress since the adoption of the Constitution with reference to the Army and the National Guard are now effective and in force.

In the last Congress, at the instance of Representative GREENE of Vermont, with the cooperation of Judge Advocate Gen. Crowder, provision was made to collect and collate and annotate—possibly codify—all existing law upon this subject, and this work is now in progress under the supervision of Gen. Crowder. When this is compiled much uncertainty will have been removed as to what laws on this subject are really in force to-day.

With the demand for greater preparedness came the thought that the Army and National Guard must be reorganized by suitable legislation, and growing out of this demand and need came the Army reorganization bill.

It is only with regard to the National Guard that I wish to consider this measure.

With reference to the National Guard, the underlying thought and the foundation on which this bill was erected was the complete federalization of the National Guard.

As Congress approached the construction of this bill it was divided into a number of different groups.

There were those of the opinion, as previously expressed by Gouvernuer Morris, that the National Guard could never be made an effective part of the national plan of defense. Those who composed this group, led by Representative GARDNER, of Massachusetts, could see no possible good and no potential help in the guard. For their shibboleth they adopted the idea that "No good thing can come out of Nazareth."

Another group was composed of those who were the sincere friends of the guard. Among this group were Chairman HAY and Representative MCKENZIE, of Illinois, of the Military Affairs Committee in the House.

Another group were those who favored doing nothing for either the betterment of the Army or the guard. Like those of old, "being blind, they saw not; being deaf, they heard not."

Those in charge of the congressional program had determined upon the complete federalization of the guard, and with them to think was to act. They proceeded upon the theory that "if 'twere done, then 'twere well 'twere quickly done."

The fact that the Constitution of the United States, in the sixteenth subdivision of section 7 of Article 1, said that Congress should have the power—

> To provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress—

presented many difficulties was not permitted to dampen their zeal and ardor or to delay their action.

Inspired by the sage interrogatory of one congressional celebrity of "What's the Constitution among friends?" they hurried gayly on their way.

When the bill was finally drafted and reported from the Military Affairs Committee of the House, it was apparent that their determination at all hazards to federalize the National Guard had badly warped the judgment of the committee as to the rights of Congress to completely federalize the National Guard.

In the bill they had written the things that they thought necessary to write in order to accomplish this purpose and in the writing much violence was done to the Constitution.

According to the very plain terms of this organic act, the States could determine each for itself whether or not it would organize any National Guard—if so, how many it would organize, how it would equip its National Guard. To each State was exclusively confided and intrusted by the Constitution, in time of peace, the training of the guard (and I think that means how discipline should be enforced), what officers should be appointed, and what qualifications these officers should possess.

For more than 100 years no one seriously questioned or doubted that these rights belonged to the State, and in the opinion of judges advocate and Attorneys General, and by the decision of many courts—which I shall not attempt to set out in this paper—such rights of the States were confirmed and approved.

To the General Government was reserved the right to use this force to repel invasion, to suppress insurrection, and to enforce the laws of the Union.

For this period this decision of rights, duties, and responsibilities was generally satisfactory, but of late years gradually growing out of unsatisfactory experience, the conviction arose in the minds of many that there must be greater Federal control and regulation, or that the National Guard could not be an effective National aid.

I quite agree that the National Guard should be placed either under exclusive State control, or that the General Government must practically take charge of the same.

It must either be essentially a State force as it was originally designed to be, with the right of the Government to call for its services in time of need, or else it must be placed exclusively under Federal control for Federal purposes.

I am well satisfied that a joint control with all of the conflicting points of difference and divided responsibility will not inure to the benefit of the National Guard, nor will it produce a force that will be valuable for either State or National purposes.

But because I can agree that there may be need for a change in the control of the guard, I can not close my eyes to the unconstitutional sections of the Army reorganization bill as it affects the National Guard.

Of such unconstitutional sections there are many.

Where, I inquire, is the constitutional authority for the following provisions?

SEC. 60. Organization of National Guard units: Except as otherwise specifically provided herein, the organization of the National Guard, including the composition of all units thereof, shall be the same as that which is or may hereafter be prescribed for the Regular Army, subject in time of peace to such general exceptions as may be authorized by the Secretary of War. And the President may prescribe the particular unit or units, as to branch or arm of service, to be maintained in each State, Territory, or the District of Columbia in order to secure a force which, when combined, shall form complete higher tactical units.

SEC. 61. Maintenance of other troops by the States: No State shall maintain troops in time of peace other than as authorized in accordance with the organization prescribed under this act: *Provided*, That nothing contained in this act shall be construed as limiting the rights of the States and Territories in the use of the Guard within their respective borders in time of peace: *Provided further*, That nothing contained in this act shall prevent the organization and maintenance of State police or constabulary.

SEC. 62. Number of the National Guard: The number of the enlisted men of the National Guard to be organized under this act within one year from its passage shall be for each State in the proportion of 200 such men for each Senator and Representative in Congress from such State, and a number to be determined by the President for each Territory and the District of Columbia, and shall be increased each year thereafter in the proportion of not less than 50 per cent until a total peace strength of not less than 800 enlisted men for each Senator and Representative in Congress shall have been reached: *Provided*, That in States which have but one Representative in Congress such increase shall be at the discretion of the President: *Provided further*, That this shall not be construed to prevent any State, Territory, or the District of Columbia from organizing the full number of troops required under this section in less time than is specified in this section, or from maintaining existing organizations if they shall conform to such rules and regulations regarding organizations, strength, and armament as the President may prescribe: *And provided further*, That nothing in this act shall be construed to prevent any State with but one Representative in Congress from organizing one or more regiments of troops, with such organizations and members of such organizations to receive all the benefits accruing under this act under the conditions set forth herein: *Provided further*, That the word Territory as used in this act and in all laws relating to the land militia and National Guard shall include and apply to Hawaii, Alaska, Porto Rico, and the Canal Zone, and the militia of the Canal Zone shall be organized under such rules and regulations not in conflict with the provisions of this act as the President may prescribe.

SEC. 64. Assignment of National Guard to brigades and divisions: For the purpose of maintaining appropriate organization and to assist in instruction and training, the President may assign the National Guard of the several States and Territories and the District of Columbia to divisions, brigades, and other tactical units, and may detail officers either from the National Guard or the Regular Army to command such units: *Provided*, That where complete units are organized within a State, Territory, or the District of Columbia the commanding officers thereof shall not be displaced under the provisions of this section.

SEC. 68. Location of units: The States and Territories shall have the right to determine and fix the location of the units and headquarters of the National Guard within their respective borders: *Provided*, That no organization of the National Guard, members of which shall be entitled to and shall have received compensation under the provisions of this act, shall be disbanded without the consent of the President, nor, without such consent, shall the commissioned or enlisted strength of any such organization be reduced below the minimum that shall be prescribed therefor by the President

SEC. 69. Enlistments in the National Guard: Hereafter the period of enlistment in the National Guard shall be for six years, the first three of which shall be in an active organization and the remaining three years in the National Guard Reserve, hereinafter provided for, and the qualifications for enlistment shall be the same as those prescribed for admission to the Regular Army: *Provided*, That in the National Guard the privilege of continuing in active service during the whole of an enlistment period and of reenlisting in said service shall not be denied by reason of anything contained in this act.

SEC. 71. Hereafter all men enlisting for service in the National Guard shall sign an enlistment contract and take and subscribe to the oath prescribed in the preceding section of this act.

SEC. 74. Qualification for National Guard officers: Persons hereafter commissioned as officers of the National Guard shall not be recognized as such under any of the provisions of this act unless they shall have been selected from the following classes and shall have taken and subscribed to the oath of office prescribed in the preceding section of this act: Officers or enlisted men of the National Guard; officers on the reserve or unassigned list of the National Guard; officers, active or retired, and former officers of the United States Army, Navy, and Marine Corps; graduates of the United States Military and Naval Academies and graduates of schools, colleges, and universities where military science is taught under the supervision of an officer of the Regular Army, and, for the technical branches and staff corps or departments, such other civilians as may be especially qualified for duty therein.

SEC. 75. The provisions of this act shall not apply to any person hereafter appointed an officer of the National Guard unless he first shall have successfully passed such tests as to his physical, moral, and professional fitness as the President shall prescribe. The examination to determine such qualifications for commission shall be conducted by a board of three commissioned officers appointed by the Secretary of War from the Regular Army or the National Guard, or both.

SEC. 91. Discipline to conform to that of Regular Army: The discipline (which includes training) of the National Guard shall conform to the system which is now or may hereafter be prescribed for the Regular Army, and the training shall be carried out by the several States, Territories, and the District of Columbia so as to conform to the provisions of this act.

SEC. 92 Training of the National Guard: Each company, troop, battery, and detachment in the National Guard shall assemble for drill and instruction, including indoor target practice, not less than 48 times each year, and shall, in addition thereto, participate in encampments, maneuvers, or other exercises, including outdoor target practice, at least 15 days in training each year, including target practice, unless each company, troop, battery, or detachment shall have been excused from participation in any part thereof by the Secretary of War: *Provided*, That credit for an assembly for drill or for indoor target practice shall not be given unless the number of officers and enlisted men present for duty at such assembly shall equal or exceed a minimum to be prescribed by the President, nor unless the period of actual military duty and instruction participated in by each officer and enlisted man at each such assembly at which he shall be credited as having been present shall be of at least one and one-half hours' duration and the character of training such as may be prescribed by the Secretary of War.

SEC. 103. General courts-martial of the National Guard not in the service of the United States may be combined by the orders of the President or of the governors of the respective States and Territories or by the commanding general of the National Guard of the District of Columbia, and such courts shall have the power to impose fines not exceeding $200, to sentence to forfeiture of pay and allowances, to a reprimand, to dismissal or dishonorable discharge from the service, to reduction of noncommissioned officers to the ranks, or any two or more of such punishments may be combined in the sentences imposed by such courts.

That all of these sections are necessary for a proper coordination of the National Guard, the Army, and the scheme for national defense, if the guard is to be federalized, I do not question; and if this is to be done I am heartily in sympathy with and in favor of each of the sections above set forth.

I have no doubt of the absolute unconstitutionality of each and every one of these sections.

In time of peace the General Government can not either appoint or remove officers of the National Guard, yet these sections—64, 65, 74, 75, 77, 103—virtually do both of these things either directly or indirectly.

The General Government can not tell the States how many National Guard they must provide, and yet these sections—61, 62, 68—do direct them to enlist and maintain a certain number and not to exceed a certain number.

The General Government can not, in my judgment, prescribe the form of oath that must be taken by officers and enlisted men in the National Guard, but by this law—sections 71, 72, 73, 74—it assumes this right, and assumes to extend by oath the duty and undertaking of both officer and man to respond for foreign offensive operations, a thing not contemplated by the Constitution; and the act further provides that no officer or enlisted man may be a member of the guard unless he takes such oath.

I have no hesitancy in asserting that it is not within the power of Congress to prohibit the States from organizing and maintaining such part of the militia as such States may desire.

The power of the State to provide for the organization of its own militia is not derived from the Constitution of the United States.

The power existed and was exercised before the adoption of the Constitution, and its exercise by the State is not prohibited by that instrument.

It is only such legislation as is repugnant to the authority of Congress that must give way even when the authority conferred upon Congress is being exercised. See Gilman *v.* Philadelphia (3 Wall., 713), Livingston *v.* Van Ingen (9 Johns., 566), Sturges *v.* Crowninshield (4 Wheat., 122), Blanchard *v.* Russell (13 Mass., 1).

The effect of the second amendment to the Constitution of the United States—

A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed—

Was considered in the case of Presser *v.* People of Illinois (116 U. S., 252), where the court speaks as follows:

We are next to inquire whether the fifth and sixth sections of Article XI of the Military Code are in violation of the other provisions of the Constitution of the United States, relied on by the plaintiff in error. The first of these is the second amendment, which declares: "A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed."

We think it clear that the sections under consideration, which only forbid bodies of men to associate together as military organizations, or to drill or parade with arms in cities and towns unless authorized by law, do not infringe the right of the people to keep and bear arms. But a conclusive answer to the contention that this amendment prohibits the legislation in question lies in the fact that the amendment is a limitation only upon the power of Congress and the National Government, and not upon that of the States. It was so held by this court in the case of United States *v.* Cruikshank (92 U. S. 542, bk. 23, L. ed., 588), in which the Chief Justice, in delivering the judgment of the court, said that the right of the people to keep and bear arms "is not a right granted by the Constitution. Neither is it in any manner dependent upon that instrument. The second amendment declares that it shall not be infringed; but this, as has been seen, means no more than that it shall not be infringed by Congress. This is one of the amendments that has no other effect than to restrict the powers of the National Government, leaving the people to look for their protection against any violation by their fellow citizens of the rights it recognizes to what is called in New York *v.* Miln (11 Pet., 139, 36 U. S., bk. 9, L. ed., 662), the powers which relate to merely municipal legislation, or what was perhaps more properly called internal police, 'not surrendered or restrained' by the Constitution of the United States." (See also Barron *v.* Baltimore, 7 Pet., 243, 32 U. S., bk. 8, L. ed., 672; Fox *v.* Ohio, 5 How., 410, 46 U. S., bk. 12, L. ed., 212; Twitchell *v.* Commonwealth, 7 Wall.,

327, 74 U. S., bk. 19, L. ed., 224; Jackson v. Wood, 2 Cow., 819; Commonwealth v. Purchase, 2 Pick., 521; United States v. Cruikshank, 1 Woods, 308; North Carolina v. Newsom, 5 Ired., 250; Andrews v. State, 3 Heisk., 165; Fife v. State, 31 Ark., 455.)

The extent and kind of training which the States shall give in time of peace is prescribed by the act (sec. 82, 91, 92, 93, 95) when by the Constitution the training of the National Guard is intrusted to the States.

An even more flagrant instance of patent unconstitutionality is the provision of the act which gives the President the right to court-martial a National Guard officer in time of peace when such officer is not in the service of the United States (sec. 103).

Most certainly in the enactment of these provisions Congress did not intend to let the Constitution stand in the way of its headlong speed or to prevent the federalization of the National Guard.

Now, I am wholly in sympathy with the purpose to make the National Guard the fullest possible auxiliary and reserve to the Regular Army, even though that should require federalization.

Indeed, I have long been an advocate of the plan to enlarge as much as possible the use and worth of the guard, as a National Guard officer, and I believe if the guard is to be federalized the things that Congress has attempted to do to be in the main necessary things, but I also fully believe that the things outlined above in the sections quoted are things which Congress is not authorized to do by the Constitution.

You ask what is to be done if such things are needed but are not authorized by the Constitution?

As I see it, the answer is very plain. The provision of the Constitution above quoted as applied to the National Guard is entirely obsolete if the guard is to be federalized, and in that contingency is not adapted to our national needs at the present time.

We have become a world power, and our reserve to the Regular Army must be constituted in view of this fact and upon that basis.

To do this if it is determined to federalize the guard will require that the Constitution be amended so as to provide for a guard that will be national in its scope and character, formed out of the citizens of the land who shall be as little disturbed as possible in their avocations and business and private pursuits, having in view the national need, but who will understand that there is to be full and immediate response upon their part when the Nation calls.

The Constitution as amended must provide for adequate training, instruction, and preparation for that response in time of peace, and must assure to the guard a proper and certain place in the military forces of the United States.

Until this is done the argument of the enemies of the National Guard that it constitutes 48 separate armies instead of 1 will have much weight and be of much force. Instead of uniformity of excellence among the guard, there will be under the present system confusion and uncertainty, as there has been in the recent mobilization of the guard upon the Mexican border.

Opponents of this plan will say that under such a constitutional amendment a National Guard can not be maintained. I am not at all certain that it can be; but if it can not, the sooner we understand that we are leaning on a broken reed the better, and then the only alternative is universal military training—note I say training and do not say universal service.

The legal status of the National Guard should be made such that it will be the most efficient reserve possible to the Regular Army. Such efficiency can not be secured upon the basis of unconstitutional enactment, no matter how laudable may have been the purpose that secured the enactment.

So far this paper has been devoted to a consideration of those parts of the Army reorganization bill that are not valid and that can not affect the legal status of the National Guard.

With reference to the present status of the National Guard, I can not do better than adopt a memorandum furnished to the Secretary of War July 29, 1916, by Gen. Crowder, Judge Advocate General, where he says:

1. The views of this office are desired with respect to the questions raised in the accompanying letter by the Hon. J. HAMPTON MOORE, M. C., with respect to the status of members of the National Guard now in the service of the United States. The questions submitted by Mr. MOORE are as follows:

"(a) Is the National Guard, as at present mustered in by officers of the Regular Army under the oath required by the national-defense act (the Hay bill), in the jurisdiction of the States, subject to orders from the governors, or is it now a part of the Regular Army of the United States, in the pay of the United States Government, and subject to the Regular Army term of service? An answer to this inquiry might include the further question as to the pensionable status of members of the National Guard as now sworn in for service along the Mexican border.

"(b) If the National Guard, as at present in service along the Mexican border, has not been drafted along the Mexican border, has not been drafted under existing law, including the Dick Act and the national-defense act, is it available for service under the Constitution beyond the borders of the United States? An answer to this question may include the statement of the effect of the resolution of Congress declaring an emergency to exist."

2. In answering these questions the term "Organized Militia" will be applied to the militia organized under the act of January 21, 1903, known as the "Dick bill" (32 Stat., 775), as amended, and the term "National Guard" will be applied to the members of the Organized Militia who have qualified under the national defense act of June 3, 1916, by subscribing the oath and enlistment contract as provided in sections 70 and 73 of that act.

3. The Organized Militia of the States of Arizona, New Mexico, and Texas have been mustered into the service under the call of May 9, 1916, and the Organized Militia and National Guard of the other States are in the service under the call issued by the President June 18, 1916, both calls being for the purpose of protecting the United States against aggression from Mexico.

4. The questions submitted will be answered first with respect to the Organized Militia of the States of Arizona, New Mexico, and Texas. These were mustered into the service of the United States under section 7 of the Dick bill, the officers and enlisted men taking in connection with the said muster the oath prescribed by the muster-in regulations promulgated under that law. Their status is that of militia called into the service of the United States for one of the purposes specified in the Constitution—that is, to protect the United States against invasion. While in such service they are subject to the laws and regulations governing the Regular Army, so far as applicable to their temporary status, and are subject only to the orders of the President. They are not, while in such service, under the jurisdiction of the States, nor are they subject to the orders of the governors, whose authority over them for the time being is suspended, except only with respect to the appointment of officers. They are not a part of the Regular Army of the United States, nor are they subject to the Regular Army term of service. They are in the service as militia, called forth to meet the exigency for which the call was issued. While in the service they are, of course, in the pay of the United States Government, and are entitled to the same pay and allowance as the regular troops. With regard to their pensionable status, section 22 of the Dick bill gives them the benefit of the pension laws for any disability incurred in the service, and, in case of death, confers on the widow or children of the deceased all the benefits of such pension laws. Under the decision of the comptroller of July 20, 1916, the widow or beneficiary of a member of the Organized Militia whose death occurs except through his own misconduct, is entitled to the six months' gratuity pay, the same as in the case of officers or soldiers of the Regular Army.

5. Answering the questions submitted with respect to the Organized Militia and National Guard who are in the service under the call of June 18, 1916, it should be observed that shortly after the passage of the national defense act of June 3, 1916, the Organized Militia of the several States began to transform themselves into the National Guard of the new national defense act. The call of June 18, 1916, found this process of transformation going on, and it was necessary, therefore, for that call to embrace both the Organized Militia and the National Guard if it were to be effective to call into the service of the United States all of the militia forces, and it was so drafted.

6. With respect to those organizations of the Organized Militia that had transformed themselves prior to June 18, 1916, into the National Guard under said act, no muster-in was necessary, as it was the effect of the call to place them in the service of the United States from the date they were required by the terms of the call to respond thereto. (Sec. 101, national defense act.) The muster-in rolls of the several organizations are on file in the War Department, but this office has not had an opportunity to give them any detailed examination. It is understood, however, that pursuant to instructions the members of the Organized Militia who had not qualified under the national defense act were required to be mustered in, taking the prescribed muster-in oath; but as to those who had so qualified, their names were entered upon the muster rolls, with a notation to the effect that they had already taken the oath prescribed in sections 70 and 73 of the national defense act.

7. There are, therefor, in the service of the United States under the call of June 18, 1916, two classes of militia. One the militia organized under the Dick bill, and the other the National Guard as organized under the national-defense act. With respect to those who have not qualified under the national-defense act their status is identical with that of the Organized Militia of the States of Arizona, New Mexico, and Texas, which is discussed above. The status of those who have qualified under the national-defense act is that of National Guard "called as such into the service of the United States" (sec. 191, national-defense act), and they are, while in such service "subject to the laws and regulations governing the Regular Army" so far as applicable to their temporary status, and are subject only to the orders of the President. They are not, while in service, under the jurisdiction of the States nor are they subject to the orders of the governor, whose authority over them for the time being is suspended, except only with respect to the appointment of officers within the classes specified in the national-defense act of June 3, 1916. They are not a part of the Regular Army of the United States nor are they subject to the Regular Army term of service. Like the Organized Militia, whose status is discussed above, their status in the service under the call is that of militia called into the service of the United States for one of the purposes specified in the Constitution—that is, to protect the United States Government, and are entitled while in the service to the same pay and allowances as regular troops. In fact, both classes of troops, while in the service of the United States, are subject to the laws and regulations governing the Regular Army, so far as applicable to their temporary status, and subject only to the orders of the President. Neither class of troops, while in such service, is under the jurisdiction of a State or subject to the orders of a governor, whose only authority with respect to them is, as above stated, to appoint officers to any vacancies which may occur. Both classes of the militia are entitled to pensions for disabilities incurred during their period of service under the same conditions as are regular troops, and their beneficiaries are also entitled, under the decision of the Comptroller of July 20, 1916, to the six months' gratuity pay in the case of their death while in the service from wounds or disease "not the result of their own misconduct."

8. Much of the misconception that has arisen regarding the status of the National Guard in service under the call of June 18, 1916, appears to rest on the assumption that it is the effect of the new oath and enlistment contract, and the call of that date, to make the National Guard available for any service for which the Regular Army may be used, during the period of service under the call. But that Congress did not so intend is evident from the fact that the act of June 3, 1916, contains a provision (sec. 101) applicable to the National Guard "when called as such into the service of the United States," and a district provision (sec. 111) for drafting them into the Federal service, appli-

cable only "when Congress shall have authorized the use of the armed land forces of the United States for any purpose requiring the use of troops in excess of those of the Regular Army." As to persons so drafted, it is distinctly provided that they "shall, from the date of their draft, stand discharged from the militia and shall from said date be subject to such laws and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army * * *." It is clear, I think, that the national-defense act contemplates that the National Guard shall be available for service either as National Guard called into the service of the United States as such for the three constitutional purposes, or, when specially authorized by Congress, as a national force supplementing the Regular Army and available for any service for which Regular troops may be used. In other words, the national-defense act gives the Government the right, in return for the expenditure for pay, training and equipment of the National Guard, to draft them into the Federal service to supplement the Regular Army, but this right can be exercised only when Congress shall have authorized its exercise, as has been done in the joint resolution of July 1, 1916.

9. With regard to the effect of the declaration in the joint resolution of July 1, 1916, that an emergency exists, I think there can be no question but that this declaration serves as the reason for conferring the authority to make the draft, and also as a limitation upon the authority with regard to the term of service under the draft. It is provided therein that the draft shall be "for the period of the emergency, not exceeding three years, unless sooner discharged." The resolution confers a discretion on the President to issue the draft, or not, as the exigencies of the situation may require.

Section 111 is a valuable and effective section, couched in most objectionable language where it provides for the "drafting" of the National Guard.

I protested against the use of those words in the House of Representatives. The section provides:

SEC. 111. National Guard when drafted into Federal services: When Congress shall have authorized the use of the armed land forces of the United States for any purpose requiring the use of troops in excess of those of the Regular Army, the President may, under such regulations, including such physical examinations as he may prescribe, draft into the military service of the United States, to serve therein for the period of the war, unless sooner discharged, any or all members of the National Guard and of the National Guard Reserve. All persons so drafted shall, from the date of their draft, stand discharged from the militia, and shall from said date be subject to such laws and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army, and shall be embodied in organizations corresponding as far as practicable to those of the Regular Army or shall be otherwise assigned as the President may direct. The commissioned officers of said organizations shall be appointed from among the members thereof, officers with rank not above that of colonel to be appointed by the President alone, and all other officers to be appointed by the President, by and with the advice and consent of the Senate. Officers and enlisted men in the service of the United States under the terms of this section shall have the same pay and allowances as officers and enlisted men of the Regular Army of the same grades and the same service.

But this section is not self-executing, nor can the President declare that the emergency exists that requires that the National Guard be drafted, nor can the President be required to draft the guard, even though Congress declares that the emergency does exist.

Such was the case with reference to the Mexican situation.

After the act was passed and became a law the President asked Congress to declare that an emergency existed requiring that the guard be drafted into the service of the United States. On July 1, 1916, Congress complied with the request of the President, but to this day not a single man has been called into the service of the United States under the provisions of section 111. Because of a failure to so call the National Guard the greatest confusion has resulted, and in many ways the guard has been put in an unenviable light, when, in fact, it was the failure to use this section that caused the embarrassment.

So in this particular case there was a hiatus between Congress and the President that is unprovided for by the Army reorganization bill and that has caused this valuable section to lose its vitality and to be rendered nugatory and of no effect.

This was the heart of the Army reorganization bill, so far as the National Guard was concerned, and it has been paralyzed.

So then, after viewing the whole situation, I conclude that the status of the National Guard under the Army reorganization bill is most indefinite and uncertain and but little improved over what it was before the passage of that bill. Indeed, but little progress has been made in the way of national enactment since the first militia bill of 1792. But little progress can be made under the present constitutional provisions. The need of truly nationalizing the guard is great if it is to become an integral part of the defense plans of the country, but the difficulties are many and hard to overcome.

Of the valor and patriotism of the guard I have the highest opinion. As an officer of that body modesty would suggest that I let others speak as to those qualities.

But in concluding I can not refrain from the expression of the opinion that the effectiveness of the guard is greatly lessened, that the safety of the Nation is to some extent imperiled, by a lack of adequate legislation upon this subject and by lack of adequate constitutional power on the part of the General Government.

## Judge Gary's Views on the Philippine Question.

### EXTENSION OF REMARKS
OF
### HON. RICHARD W. AUSTIN,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. AUSTIN. Mr. Speaker, availing myself of the privilege to extend my remarks in the RECORD, I submit an able and patriotic speech delivered in Manila last month by Judge Elbert H. Gary at a banquet tendered him by the Merchants' Association of that city. Judge Gary's views and opinions, now that he has visited the Philippine Islands, are entitled to the respect and thoughtful consideration not only of the Members of Congress, but of all the American people. He is not a politician, seeks no political advantage, but views and considers the Philippine problem as a disinterested business man. His speech is free from prejudice, full of facts, wise, just, patriotic, and a valuable contribution to what has been said here in debate on the Philippine question. I commend it to the thoughtful consideration of my colleagues, who desire first-hand information from one of America's leading citizens and a great student of current events and problems:

GARY URGES TERRITORIAL GOVERNMENT FOR ISLANDS.

[From the Manila Daily Bulletin.]

Retention of the Philippine Islands under the United States flag as a Territory of the Union is the solution of the Philippine problem urged by Judge Elbert H. Gary as most beneficial to the permanent interests of the islands and the American people, in a masterly address delivered before the Manila Merchants' Association and a most cosmopolitan gathering of representative Americans, Filipinos, and members of the various foreign communities at the annual banquet of the association held last evening in the Manila Hotel.

There were over 200 people present at the banquet, the addresses being opened by President H. M. Pitt, of the Manila Merchants' Association, who spoke on the opportunities of the Philippines and then introduced the toastmaster of the evening, Attorney Charles C. Cohn.

Mr. Cohn in his usual happy vein introduced Alcalde Felix M. Roxas, who spoke of the old days and the good accomplished by American occupation. He also paid tribute to the merchants' association and said that it fully anticipated the wants of the country, while at the same time it did not interfere with the government.

William H. Taylor, the next speaker, being too ill to attend, his speech was read by Associate Justice E. Finley Johnson, of the supreme court.

Mr. Cohn then expressed in behalf of the merchants' association their appreciation of the visit of Judge Gary and introduced the guest of honor.

During the evening there were several musical selections, the constabulary orchestra being present for the occasion. The program included vocal selections by W. H. Lewis, Mrs. Alice Widney Conant and O. M. Shuman, Guy Harrison officiating at the piano. There were also exhibitions of Spanish dances by Señorita Ortigas, and the moving pictures of the bureau of science were thrown on the screen for the benefit of those present, which was highly appreciated.

Judge Gary's address was as follows:

"There is something inherent in the very atmosphere of semi-tropical latitudes that is conducive to a spirit of liberal hospitality, and your generous reception is in line with this idea. I am grateful and I thank you.

"I came here to look and to listen, to study and to learn, to come into close contact even for a few short days with a part of this wonderful and most interesting dominion.

"I must confess to an ignorance concerning the archipelago which is hardly justifiable, and I am not qualified to speak on this occasion. There are so many important questions connected with the Philippine Islands—historical, political, social, and economic—that it is a venture for a mere business man to express opinions or make suggestions without careful previous inquiry and consideration. Still it is sometimes useful for one who comes from the large body of business interests not having any political connection to speak at random about matters that affect the welfare of all the people of his country; for every question ought to be discussed from all conceivable angles.

"At any rate I was persuaded to appear before you against my preconceived intentions, and I shall speak frankly and with the best of motives.

"When the mysterious and all-powerful forces of nature cast up from the depths of the sea the material for the physical foundation of the Philippine Islands, an overruling Providence provided opportunity for the building of a great nation.

"The underlying essentials to everything that makes for the health and comfort and happiness of a people are the material conditions and prospects which surround them. They must, first of all, have a chance to secure the necessities of life. If their bodies are starving, they have no inclination to consider moral or political questions. Give them food and covering and they are apt to heed any reasonable suggestion. This is true the world over.

"These islands offer exceptional advantages for the support and comfort of their occupants. They are rich in natural resources. In soil, climate, and necessary moisture there are afforded facilities for the continuous and continued production of crops sufficient to maintain a population as large as those of several of the greatest nations. It is not necessary to be specific. You know better than I; but it is doubtful if any of us fully realize the extent of the agricultural productive capacity of the islands provided they were utilized to the best advantage, with the aid of all modern improvements and practice. When there shall have been conserved and practically applied all the natural resources of the country; when all the lands shall be used for the best purposes and according to the best methods; when all the power that is

contained in the rivers and cataracts is brought under control and wisely employed; when all the agencies for the production of wealth, above the ground or underneath, are systematically and intelligently devoted to the service of humankind, then it may be expected that the Philippine Islands will take their proper place as a great leading commercial and industrial center. Necessarily many things must be considered in bringing about these results.

"These natural resources and opportunities existed at the commencement of the American occupation about 16 years ago; but the inhabitants generally were receiving comparatively little benefit. Either from lack of disposition or financial ability, or both, the government which was recognized throughout the world as the owner did little to develop or to assist in developing the islands. It is not necessary, nor would it be useful to discuss the merits of any controversy relating to the previous control or management of the islands. Certain published statements may be taken as true. The islands were not developed. There were no adequate facilities for development or use. The living of the masses of the people was scant and insufficient. The health of the different communities was bad. There were no means for properly caring for the sick and distressed. The death rate was appalling. Disorders and quarrels in localities were common. The rule of officials was often tyrannical and oppressive. Fair and just treatment to many was neither a reminiscence nor even an aspiration. To them the future was hopeless. There was no incentive to strive for betterment nor for anything more than a mere existence. Ignorance prevailed. Indeed this seems to have been desired by those in authority. All this applies to a people of good natural qualities, morally, mentally and physically, occupying a land of plenty! The picture is probably not overdrawn. These people deserved a better fate. How well they deserved it we thoroughly appreciate as the result of the experience of the last few years.

"Almost as a matter of mere chance, or rather by the decree of a merciful and all-wise Providence, perhaps in answer to the prayers of a multitude of afflicted sufferers, all these conditions were to be changed. The clouds of oppression were lifted and the sunshine of hope and expectation was presented to the vision of a grateful people.

"The kingdom of Spain was recognized by the other nations of the world as the holder of the title to all these lands, and the United States of America purchased this title and took possession, and thereby assumed great responsibilities, not only to the inhabitants of the islands, but to all mankind. Our country is not an aggressive nor warlike Nation. She does not seek nor desire that which properly belongs to others. She is conciliatory and friendly to all and means to be just in every act and decision. And she is ever willing to use her strength and influence in the endeavor to fulfill every obligation to herself, to others, and to humanity. The President has expressed these sentiments in unmistakable terms, and with this principle the people of the country are in accord. As to where the line of duty leads, honest and intelligent minds often disagree, and therefore there may be differences in regard to the relations between the United States and these insular possessions. As a member of the business fraternity I dare insist that the great majority of the business men of the United States are not favorable to the administration or settlement of the affairs of the Philippine Islands solely for the purpose and with the aim of satisfying the demands of American politics.

"We recognize the rights and the welfare of the Filipinos and we know that the large majority at least, including the most intelligent and influential have a feeling of sincere friendship for the United States and are grateful for what has been done for the islands. We would reciprocate the friendship and we would assist them to become one of the greatest and most influential civic and political organizations. We are making history with the hope that what we do will entitle us to the respect and approval of the entire world in all the years to come. We expect to keep and to carry out every promise that has ever been made by our country, not including, however, alleged promises, if any, which have never been made, authorized, or proved.

"It is pertinent to inquire what the United States has already done for the islands. On taking possession she promptly furnished an organized, fully equipped, and highly efficient Army for the restoration and maintenance of order and for the discipline needed to protect life and health and property. The service of this arm of the Government, under most trying circumstances, is entitled to unstinted praise. It has displayed an intelligence, energy, and self-sacrificing spirit never excelled. In military as well as civic matters it was from the start surprisingly wise, discreet, and effective, and for undaunted courage at times when it was compelled to act almost literally in the dark it never failed in the performance of its duty. All in all it may truthfully be said the American soldiers of the Philippines have in every respect proved themselves to be worthy and competent.

"There is a misaken notion that the presence of military force is a menace to a community; that it is of itself a threat to others; that it is intended as an unreasonable restraint or a compelling argument in favor of affirmative action on the part of others. But in truth the average soldier loves peace and abhors war. He will sacrifice life itself if and when necessary, and he will never shrink from the call of duty; but he prefers to save the life of another rather than to destroy it. When he points his gun at another, it is only because he believes circumstances require it. I think the record of the Army in these islands justifies all that has been said. Indeed, it should be admitted, not only that the presence of the American soldiers during the American occupation of the islands has been beneficial, but that their presence has been essential to the welfare of all the inhabitants. There are found in all communities those who are vicious and criminal by nature and others who because of ignorance or misunderstanding must be disciplined for their own good as well as for the good of others. These islands are probably no different in this respect from other parts of the world. A strong, honest police force is no detriment to any locality. You who are familiar with the details of the record can testify to the value to the Philippine Islands of the American soldier.

"Then the United States furnished a civil government, composed of some of the ablest men, competent to formulate and administer laws and regulations for the improvement of conditions and methods; and also provided measures for the preservation of life and health and property, for the education of the inhabitants, and for the extension of commerce and commercial relations. It would require a long chapter in the history of this country to recount the splendid work performed by the civil authorities sent from the United States to the Philippines, including the Governors General and all those under them. I understand there are large numbers of Filipinos highly educated and fully competent to fill public offices, and in due time no doubt they will occupy most, if not all, of the most important public positions; but certainly it was wholly impracticable, if desired by anyone, to establish and administer in these islands a stable and efficient government prior to the acquisition by the United States. Reasons or details are not required. The United States was compelled to do all that she has done in order to serve the interests of the Filipinos and to satisfy the anxiety of the people of all the nations. Mere self-interest would have influenced her to withdraw from the islands immediately after she had completed her purchase, but it was believed by the large majority that she could not consistently do this; and, consequently, she reluctantly assumed a responsibility which it is hoped she may never have cause to regret.

"But, independently of these considerations, the government which the representatives of the United States have established and administered is of inestimable benefit to the islands and all their inhabitants. It is stable, sound, liberal, and just, and it is wisely and conscientiously administered. The present administration is no exception. We have reason to commend and congratulate those in office; and it is cause for gratification that so many of the native population are occupying places of highest importance in governmental affairs. In all respects, in fundamental provisions, in the conduct of its affairs, and in the opportunity it offers to individual effort, the Philippine government may be favorably compared to the best governments.

"And then it is worthy of comment that private capital of citizens of the United States in large amounts has been invested in the Philippines during the last decade. The islands could not have been developed except by the expenditure of immense sums of money, and capital would not have come to the country, nor would it remain except upon condition that the stability of the government and also the friendly attitude of the inhabitants are both assured. Perhaps what is needed at the present time more than anything else for the advancement of the best interests of the people of this country is the confidence of foreign investors of money that their investments will be protected. Anything that shall be done or said to raise a doubt in this respect will seriously interrupt the progress which the islands are capable of making. Thoughtless or reckless indeed is anyone who by a single word casts a doubt upon the stability of the government or insinuates that there will not be a wise, economical, honest, and liberal administration. Capital seeks safety and permanency; it avoids uncertainty.

"The members of this association are to be congratulated on the success of their efforts to advance the business interests of this community and of the islands generally. You have pursued a straightforward course, aggressive yet fair and reasonable, and you will receive the commendation of everyone who is familiar with your efforts. You are building for a long future, and perhaps better than you know.

"Everywhere at the present time the successful business man is as popular as he was in former times before the persistent cry of the demagogue raised a temporary doubt in the minds of many of the people as to whether business was fairly and decently conducted. As you know, there has been a decided change of sentiments in this respect. Perhaps there was some ground for complaint in regard to business methods, but if so, it has disappeared. I am quite sure the business men of Manila are managing the affairs intrusted to them with the regard for the rights of everyone concerned. The high ideals of our Government should be applied to every department of business activity. You have appreciated your responsibility, and I congratulate you.

"The business men of this association and all others who have invested their funds in business or property located in the Philippine Islands are entitled to full and adequate protection and assistance so far as the same can be furnished by the United States Government or its agencies. Any neglect or indifference in this particular would not be honorable or excusable. The people of the United States believe in fair play, in justice to every interest involved, in full consideration of all the facts and circumstances, and then impartial treatment of every person to be affected regardless of his nationality or previous condition; and what the people advocate the Government itself is sure to adopt sooner or later.

"What I have said naturally leads up to the inquiry: What of the future of the Philippine Islands? This is a serious question, and it involves many other questions which should engage the most careful and disinterested attention of the people of the islands, and of the United States as well. The opportunities for future development and progress are very great. Undoubtedly it is within the bounds of possibility for the islands to secure and occupy a leading position in the onward march of nations if the most and best shall be made of the chance which nature offers. Much, perhaps everything, depends on the Filipinos themselves, and their desire and effort will be influenced by the attitude of Americans. Circumstances almost beyond the control of either, created without previous deliberation, force the conclusion that the latter are more or less responsible for the destiny of the former. In view of these facts, ought the islands to be turned over to the absolute and independent possession and control of the inhabitants? The problem might be easily solved if the United States could conscientiously wash its hands of all responsibility and permit the Filipinos to decide; but would this be fair and reasonable?

"I make bold to offer the suggestion that the Filipinos themselves should give most careful consideration to the question as to whether it would not be to their advantage to have the islands permanently attached to the United States as a part of its territory; and that unless and until these people are beyond doubt qualified to pass upon and actually vote upon the proposition, the control and occupation remain as at present. This action would not, of course, be authorized by, nor binding upon, the United States, but it should have a decided influence on the final disposition of a complicated subject.

"As the matter presents itself to my mind, there are grave doubts as to whether the Filipinos if relegated to their own resources could be expected to establish and administer a government that would be satisfactory to themselves or to neighboring nations or that would result in security to the lives and health and property of individuals or permit the development, growth, and progress which would be natural and certain under other conditions. In saying this I am not underestimating the capabilities of large numbers of Filipinos already adverted to. It is likely there would be discord, disease, disaster in many parts at least and in that case the final result could be prognosticated without any stretch of imagination—a lost opportunity and a decaying race.

"On the other hand, if the islands should remain permanently United States territory, with a stable government and with the supply of the necessary capital which would be attracted, the future of the islands would be assured. Everything favorable which I have suggested as coming within the limits of opportunity would be realized; not in a day or a year, but in the natural course of a progressive and prosperous country. The islands are too fine, their productive capacity too great, and their people generally too worthy in instinct and disposition and natural ability to neglect the chance, if it should be offered, of becoming a part of perhaps the leading nation of the world. As to power and dominion, if that should be involved in the discussion,

I would rather be the governor or the governor general of a rich and prosperous State or Territory than the president of an unhealthy, impoverished, and distracted republic. Give the Filipinos a chance to understand and to deliberate and they will agree with what I have said. And surely every other nation who may have relations with them, business or otherwise, would welcome the connection.

"But what would be the attitude of the United States? Well, I speak only as a business man. We have paid $20,000,000 for the property. We have expended considerable money to preserve life and health and for maintenance of an army; but above everything else, we have assumed obligations we can not shirk. Our Nation is big and honorable and too exalted in character to harbor even a thought of being unfaithful to the trust which fate has imposed. If we were to retire from the Philippines and as a result she should prove to be a menace—if conditions should become dangerous or deplorable, I fear we would be in duty bound to resume the burden of protection, and in that case we would be worse off than at present. Therefore I conceive it to be our duty to decide what shall be our attitude and action without regard to the question of dollars.

"However, I sincerely believe that with the natural resources and facilities which the Philippines possess and with power development and utilization, the retention of the islands would prove to be advantageous to the United States of America from the financial standpoint. The Filipinos as a race have great possibilities. We might expect to see within a few decades a large, healthy, vigorous, and highly prosperous people. The business relations between the peoples of the two countries would be profitable and revenue received by the United States would be large. The islands are already self-supporting and their expenditures have been large and generous for the purposes of education, protection of health, erection of buildings, construction of roads, development of the country, and the general cost of government administration. Aside from the expense of maintaining the Army, the United States is not required to contribute any money for current expenses or for the upbuilding of the country and its commercial, industrial, and social demands. Moreover, the Philippine Islands are capable of furnishing in unlimited quantities the products peculiar to tropical climates, which the United States can not obtain elsewhere within her territory and which are highly essential to a complete and rounded-out commercial nation. We will do well to ponder on these things. From every standpoint I believe it would be beneficial, both to the Filipinos and to the people of the United States if the latter should sooner or later have within its domains a Territory or a State designated on the map as 'Philippine.'

"And now it only remains for me to thank you again for your kind reception, as generous as it is undeserved, and to congratulate all who have been connected with the vitalization of the islands on the remarkable progress that has been made toward their development and the improvement of the conditions of the inhabitants."

## The Post Office Appraprlation Bill.

### EXTENSION OF REMARKS

OF

### HON. HARRY E. HULL,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. HULL of Iowa. Mr. Speaker, the biggest joker in this Post Office bill is that section which relates to the standardizing of rural routes. Under the guise of protecting the farmer, there has been inserted in this bill a section which really legalizes the illegal act committed by the Post Office Department during the past year when it proceeded to demoralize the rural-route system without the authority so to do. When Congress convened last fall practically the entire country was up in arms against the ruthless slaughter of the mail service in the rural districts. Democratic and Republican Congressmen alike filed vehement protests with the Post Office Department, and the subject was extensively discussed on the floor of the House. At that time I called attention to the fact that the Post Office Department had no legal right to manipulate the rural routes as it had done. I claimed at that time that Congress had appropriated certain sums to maintain the rural routes for the ensuing year, and that an administrative department here in Washington had no legal right to interfere with a decree of Congress. There were many who agreed with me, and the demand for legislation that would effectively put a stop to further mutilation of the rural routes was general. In order to allay the storm the Post Office Department at that time was ready to promise almost anything. In the meantime it recognized the fact that it had been doing what it had no right to do, so it quietly but persistently got busy, and the clause that now appears in the bill is a result. If any of the many Congressmen who entered a vigorous protest against the actions of the department in the last year can tell me how this section is going to remedy the conditions that they complained of, I would like to have it explained.

The section is so worded that it gives the Post Office Department practically unlimited power to do what it will with our rural routes. A year ago it demoralized them in open defiance of the law. Now it has managed to secure the law to back up its actions. This section provides that a standard, horse-drawn route shall be 24 miles in length. But it also provides that in the discretion of the Postmaster General this 24-mile route may be extended not to exceed 50 per cent of the standard route. In other words, he can tack on just 12 miles, making a route 36 miles in length. It seems to me the joker is so obvious that any man can plainly see what the result will be. If we can judge the future by the past, the Post Office Department is going to try some more of its so-called economy at the expense of the farmers. Not only is he going to do it, but he now has the law back of him in the deal. The preponderance of evidence presented before the Post Office Committee and this House proved that a horse-drawn rural route more than 24 miles in length was impractical. This section would allow the Postmaster General to tack on 12 more miles. It does even more than this, it gives him the absolute power over the delivery of mail to those millions of farmers who reside in the country districts; it gives him the power to show favoritism; it gives him an opportunity to use this rural-route system in the political game; and it gives an administrative office the power to legislate. The rural routes, since the demoralization of the last year, are in a deplorable condition. I will venture to say that 95 per cent of the farmers affected will tell you they are too long and impractical. The present section affects not only the farmers but the rural-mail carriers. It provides pay on a basis of 24-mile routes, but it does not provide any additional pay when routes are extended. In other words, it is tacking on much more labor with no adequate compensation. There is no harder working or more conscientious set of men than the rural carriers. Their compensation is small for the labor that is required of them. Why should the Government increase their work without so doing with their compensation? I predict that there will be as much dissatisfaction in the future as there has been in the past with the rural-route proposition, and I think it is time that adequate legislation be enacted tending to give relief to the rural communities.

This clause, allowing the Post Office Department to lengthen routes to 30 miles without cost and 36 miles as they see fit, with only one-half pay for the mileage in excess of 30 miles, is proof positive of the love of the Democratic Party for the farmer. It means in the next five years the crippling, almost the destruction, of the Rural Route Service. It means that 40 per cent of the farmers now receiving their mail at the front door will be compelled to go over one-fourth of a mile and more to get their mail. It means that practically all farmers who have not already had their service taken away or curtailed are to feel the iron hand of some bureau chief here in Washington, who, without any knowledge as to conditions, revises the routes so as to make them 30 miles or more in length. Rural-route carriers, with 24-mile routes, using horses, now work 60 per cent of the year 12 hours or more each day to deliver mail regularly. It is abject slavery to ask more of them. Experts on horseflesh agree that on ordinary roads to drive a horse over 24 miles every day constitutes cruelty to animals. This is the measure of love that the Democratic administration has for humanity. Old, faithful public servants, now working 16 hours a day, are to have their days lengthened until they fail to perform their service to the farmers and are thereby forced to abandon the job.

We asserted on the floor of the House that the Democratic Party had taken the money that Congress gave them to keep these routes running and used it to finance the Government. Within the last month the Post Office Department, with a flourish of trumpets, has turned over to the Treasury almost the exact amount that the Rural Route Service has cost less than the Sixty-third Congress gave them to spend. This means that the farmers were robbed of just that amount and the money used for other purposes; probably taken down South to dig a channel in some dry creek bed. At that time the only answer that we got from the distinguished chairman of the Post Office Committee was, "What has the farmer got to say about it anyway?" I replied that they might have something to say in November, and the opportunity is squarely up to them to have their say at that time. I now predict that if this administration is retained in power they will lengthen out the balance of the routes to 30 miles or more, thus eliminating about 25 per cent now running, and farmers will be forced to go a mile or so for their mail, which will come to them from a town probably not their trading center, and coming so irregularly as not to be relied upon. Mr. Burleson and Mr. Blakslee are retained in high position over the protest of Senators and Representatives in order that they might complete the job they have started.

That this is the condition of the Rural Route Service is not the fault of Republican Congressmen or Senators. They have worked hard to save the service, and they have had the assistance of many of their Democratic brethren, but the administration was able to kill their amendment that would have preserved the service to the farmer, and the administration was

able to dictate the clause which is now in the present Post Office bill, the clause that was intended to deprive the farmer of his Rural Route Service to such an extent that it will be almost worthless to him. It is really up to the farmers themselves, and by their decision at the coming election they will decide themselves whether they will permit this to be done or not.

## The Adamson Bill.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM H. COLEMAN,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. COLEMAN. Mr. Speaker, the Adamson bill, passed by this House Friday last and since enacted into law, in my judgment violates the fifth amendment to the Constitution of the United States, which provides that no person shall be deprived of life, liberty, or property without due process of law, and is, in so far as it purports to grant an eight-hour workday and an increase of wages of the railway trainmen, a fraudulent and deceptive piece of legislation.

No serious argument has been advanced in favor of the measure by those who gave it their support. The only effort at justification on the part of those favoring the bill was the pleading of an existing emergency—the threatened railroad strike. No attempt was made to justify the law upon its merits, and many of those who supported the measure, as well as those who opposed it, are of the opinion that it is unconstitutional. That it does violate the principle of freedom of contract and is in contravention of the fifth amendment of the Constitution of the United States it would seem to me there can be little doubt.

In the case of Adair against United States, Two hundred and eighth United States Reports, page 161, the Supreme Court in construing section 10 of the act of Congress of June 1, 1898, concerning carriers engaged in interstate commerce and their employees, which section made it a crime against the United States to unjustly discriminate against an employee of an interstate carrier because of his being a member of a labor organization, the court, in striking down the law, said:

> This question is admittedly one of importance and has been examined with care and deliberation, and the court has reached a conclusion which in its judgment is consistent with both the words and spirit of the Constitution, and is sustained as well by sound reason.

The court, after citing numerous authorities, further said:

> It results on the whole case that the provision of the statute under which the defendant was convicted must be held to be repugnant to the fifth amendment and as not embraced by nor within the power of Congress to regulate interstate commerce, but under the guise of regulating interstate commerce and as applied to this case it arbitrarily sanctions an illegal invasion of the personal liberty as well as the right of the property of the defendant, Adair.

In the case of Coppage against Kansas, Two hundred and thirty-sixth United States Reports, page 1, in which the Supreme Court was called on to construe an act of the Kansas State Legislature which made it unlawful for employers to coerce, require, or influence employees not to join or remain members of labor organizations, the act was stricken down as being in violation of the fourteenth amendment to the Constitution, which amendment declares that no State shall deprive any person of life, liberty, or property without due process of law, applying to the States the same constitutional provision as in the fifth amendment is applied to the legislative authority of the United States.

The court, referring to the case of Adair against United States and the judgment therein arrived at, said:

> We are now asked in effect to overrule it, and in view of the importance of the issue we have reexamined the question from the standpoint of both reason and authority. As a result we are constrained to reaffirm the doctrine there applied. Neither the doctrine nor this application of it is novel. We will endeavor to restate some of the grounds upon which it rests. The principle is fundamental and vital, included in the right of personal liberty and the right of private property partaking of the nature of each is the right to make contracts for the acquisition of property. Chief among such contracts is that of personal employment by which labor and other services are exchanged for money or other forms of property. If this right be struck down or arbitrarily interfered with there is a substantial impairment of liberty in the long-established constitutional sense. The right is as essential to the laborer as to the capitalist, to the poor as to the rich, for the vast majority of persons have no other honest way to begin to acquire property save by working for money.

The question that will be raised under the Adamson law will relate to the increase of wages of employees by legislative enactment and must certainly prove a stronger case than either of those above cited. And if the laws referred to in those cases could not be upheld on constitutional grounds, how is it possible to hope for a favorable decision in the present instance, where a 25 per cent increase in wages is provided for by an act of Congress?

Freedom of contract is one of the legal rights most strongly insisted upon by the courts in general, and where any attempt is made to qualify or restrict that right, as now determined by judicial decision, the burden of proof certainly rests upon the party advocating the restriction.

If, therefore, the Adamson bill fails as an unconstitutional measure, what will be the opinion of the great army of railroad employees of those Members of Congress who voted for a bill that merely postponed the controversy until after the election by giving to the trainmen a false promise upon which to rest a forlorn hope?

NOT AN EIGHT-HOUR LAW.

While the measure purports to be an eight-hour law and is popularly referred to as such, it is well known to the Members of this House that it does not limit the hours of service and that under its provisions the railroad trainmen can work just as many hours as they were permitted to do before its passage.

It provides only—

> That, beginning with January 1, 1917, eight hours shall, in contracts for labor and services, be deemed a day's work and the measure or standard of a day's work for the purpose of reckoning the compensation for service for all employees who are now, or may hereafter be, employed by any common carrier which is subject to the provisions of the act of February 1, 1887, entitled "An act to regulate commerce"—

And so forth.

It is true that the act is entitled an eight-hour-day law, but in so far as the title of the bill is concerned it is false and misleading, as it does not tend to shorten the hours of labor. This is one of the jokers in the bill and is admirably described by the distinguished Senator from Iowa [Mr. CUMMINS] in his speech in the Senate on September 1, when he said:

> It is the brassiest gold brick that was ever tendered the people of the United States or the men who are directly interested in railway operation.

The Senator from Illinois [Mr. SHERMAN], who strongly opposed the bill in his speech in the Senate on September 2, said:

> I have told many men who look out of the cab of an engine that I believe in an eight-hour day. I believe in the limitation in mines; I believe in it in many forms of industrial life. I would not undertake by legislation in the Senate to fix the hours in each individual case or occupation presented. Such occupations in this country are multitudinous. We can not now by arbitral legislative decree here undertake to fix wages, hours, and kinds of services. We can not undertake, Mr. President, by fixed law, general in its application in this case, to settle this dispute, for it is a precedent for others to ask that we begin to administer in detail all the equities and rights growing out of the relation of master and servant.

But we need not depend upon those who opposed the bill for criticism of this provision. The distinguished Senator from Alabama, and formerly Democratic leader in the House, who, as a prominent Democrat, felt constrained to support the measure, in his speech in the Senate on September 1, in answer to a question, said:

> It does not make any difference whether you call it an eight-hour day or not, because there is no eight-hour day involved. It is only an eight-hour basis for fixing pay; and you can go on saying that you have an eight-hour day, but the fact is there is no eight-hour day in this bill. We might as well face it fairly. I believe in an eight-hour day, but an eight-hour day means that a man shall work eight hours and work no longer than eight hours. There is nothing of that kind contemplated by this bill.

It is conceded, therefore, by the supporters of the bill that it is not an eight-hour law in the sense of limiting the number of hours that certain classes of railroad employees are permitted to work within a 24-hour day. It is, on the contrary, a measure to raise wages by legislative enactment, which can not be legally done.

UNCONSTITUTIONAL PROVISION.

The bill provides in section 3:

> That pending the report of the commission herein provided for and for a period of 30 days thereafter, the compensation of railroad employees subject to this act for a standard eight-hour workday shall not be reduced below the present standard day's wage, and for all necessary time in excess of eight hours such employees shall be paid at a rate not less than the pro rata rate for such standard eight-hour workday.

The result of this provision is to increase the wages of the men involved 25 per cent. This is the real joker in the bill, and it is this provision of the law that makes it unconstitutional and which prompted many persons who are in favor of an eight-hour workday to oppose the bill, and, as is well known here, caused other Members who supported the measure to apologize and make excuses for that support.

The president of the Sante Fe road has made the following statement:

Congress, hastily acting under a threat of four leaders of labor organizations, enacted a so-called eight-hour law, which is nothing more than an advance of 20 to 25 per cent in the wages of the best paid men in railway service. It is only fair to the public and to our employees to say that the Atchison, Topeka & Santa Fe Railroad does not intend to comply with the law until they are forced to do so by the court of last resort.

Now, the law does not go into effect until January 1, 1917, by which time the presidential election will be over, Congress will again be assembled, and the Supreme Court will have been appealed to for a decision. If the decision of the Supreme Court strikes down the law, and I have heard no attorney upon this floor hold to a contrary opinion, what, I ask, will the general public, and the railway brotherhoods in particular, say of the Members of this House who gave this measure their support?

What, in the final analysis, must be the judgment of the interested parties as to the action of Congress, composed of Representatives who are supposed to understand the law? Will they then be in a mood to accept excuses and apologies, or will they, on the other hand, charge fraud and deception and hold responsible those who should have known better?

NOT A SETTLEMENT.

Nor does the bill settle the railroad strike. It has but postponed the evil day. It must be evident to us all that the real battle is to come when an attempt is made to enforce the law. As previously stated, the election will then be over; but can those who have had this measure in charge, even though they succeed for a time in deceiving organized labor by this makeshift, escape final condemnation for the passage of an act that gives nothing of value to the brotherhoods?

This legislative enactment determines nothing. It proposes only to increase wages from the 1st day of January next until the time set for the report of the investigating committee and for 30 days thereafter.

What, I ask, have the members of the four brotherhoods gained under this law? If it fails, as it must, then the brotherhoods have accomplished nothing and must turn their attention to the new conditions which will arise at the time the law is nullified. In the meantime, Congress will again assemble and the matter will be pressed for solution. With the election over and full opportunity for discussion, who can tell the final outcome? The whole of the President's program, including his recommendation for compulsory arbitration, will then doubtless be considered.

My own opinion is that had the present bill been fully considered in the House on its merits a great difference in the vote would have been the result. I am justified in this opinion by the action taken in the Senate with but one additional day for deliberation, when the Republicans of that body, supported by the prominent Progressive leaders, presented a united opposition.

I am further strengthened in this opinion by the reluctance with which Democratic Senators gave their support to the measure and the refusal of some of their number to go so far in rescuing their leader from the predicament in which he found himself.

WHERE DOES IT LEAD?

Let us suppose that the law should be upheld as constitutional, what then will result? If the right of Congress to fix wages is established and it has power to raise wages under the conditions so recently confronting it, likewise it will have power to lower wages under different conditions. So also Congress will be compelled to extend its paternal attitude and fix the wages of the clerks and shopmen, the switchmen and trackmen, the telegraphers and dispatchers, and the whole of the 1,600,000 railway employees not included in the membership of the four brotherhoods. Can our institutions stand such a strain?

Such a decision, if it should come, must necessarily lead to compulsory arbitration, or perhaps even to Government ownership. Does organized labor wish to place the value of the services of its members at the whim of Congress as it may at any time be constituted? If they do not, then they should condemn this law rather than praise it, for certainly if it should be upheld the next step is inevitable, and that step is compulsory arbitration, or something akin to it, which the general public must insist upon for its protection. Do the members of labor unions desire the enactment of such a law?

WHAT HAS BEEN ACCOMPLISHED?

Let us look the matter squarely in the face and realize what has been done. A strike has been temporarily averted, but nothing has been permanently settled. The quarrel between employer and employee was interrupted by one who, in the eyes of some, had the best interest of the public at heart, but others just as firmly believe that he was playing a game of politics for personal advantage and desired only to obtain a cessation of hostilities in order to aid his election. Whatever may have been his real motive, his efforts have produced no good result, and the men composing the four brotherhoods, who believed they were obtaining an advantage, are already beginning to feel that theirs was a barren victory.

What must these men think when they come to realize that they have been grossly deceived, and what must be their feeling in the end toward men in public place who aided in this deception?

As for myself I will not pay so great a price in order to seek the easy road to be returned to Congress. I was compelled to cast my vote against the measure because it clearly violates the fundamental law and is contrary to the spirit of our institutions. It is fraudulent in the extreme in promising what can not be fulfilled.

For my vote in opposition to the bill I have no excuse to offer, no apology to make. I voted for what I believed to be the right in view of all the circumstances, and such course I shall ever pursue, preferring defeat, standing for my convictions, to victory purchased by deception and the sacrifice of principle.

---

## The Ashbrook Widows' Pension Bill.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM A. ASHBROOK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. ASHBROOK. Mr. Speaker, the passage of the widows' pension bill I believe to be the most humane and beneficent piece of legislation to the credit of the first session of the Sixty-fourth Congress, now ended. It is a lasting honor to have been a Member of a Congress which has enacted into law more constructive legislation than any single session of Congress for the last half century—legislation which vitally benefits and affects every man, woman, and child living under the protective folds of the Stars and Stripes; legislation in the interest of the masses and not the classes; legislation and help and encouragement for those who need it most. But foremost of all, in my judgment, is this pension bill, which benefits the poor and needy old women, the wives of the men who rushed to the defense of our country when war clouds hovered over it and offered their lives as a sacrifice upon the altar of our Nation—the men who preserved our Union. We have just appropriated $600,000,000 for preparedness. This bill will cost less per annum than a battleship, but will do more for the cause of preparedness than a dozen battleships. The more generously we treat our soldiers and their dependents, the more quickly will the young men volunteer to protect and defend our country when their services are needed, knowing that should their lives be sacrificed their loved ones will be protected and cared for by a grateful Government.

Mr. Speaker, by the passage of this bill, of which I am proud to be the author, I feel greater honor has been conferred upon me than ever was before or ever will be again. With me it has been a labor of love. I feel that it can not be charged that selfishness has animated my activity. These poor old women, who are the sole beneficiaries, have no votes to give to me or to the Members and Senators who have given the bill such splendid support. We have, however, what is worth more to each one of us than votes or retention in office—their prayers and gratitude, which will abide in them to their last breath. We can have the proud satisfaction and comfort that we have helped those who could not help themselves and who most needed it. It is truly more blessed to give than it is to receive. I would rather have my name fastened to this bill than any bill which has become a law during my 10 years of service here. I am therefore supremely happy and amply rewarded for the anxious days and months I have given to secure the passage of this bill, which few, if any except myself, believed would ever become a law, again exemplifying what faith and perseverance will accomplish.

When this bill passed the House on June 17 last, I had to say about all that I cared to say upon this subject, and only asked permission to extend my remarks after securing the concurrence of the House to the Senate amendments, as will be noted

on pages 14094 and 14095 of the RECORD, that I might have the opportunity to refute certain statements, and also to briefly elucidate the several provisions of the bill and make a few observations which I hope will be generally beneficial.

Mr. Speaker, I am a Democrat, but above party I am an American first. I am not a partisan. Politics should have no place in legislation of this character. We do not pass pension laws to help Democrats or to favor Republicans, but to give statutory recognition and relief to the men who bared their breasts to the enemies' bullets that our free Government and institutions might be perpetuated. I dislike therefore to mention politics when discussing pension legislation, and would not but for the fact that certain Republicans of both the House and Senate have by word and letter been unfairly partisan. Some Republican papers also seem displeased because this bill has become a law and charge that it was passed for political expediency. I have during the past nine months received fully 10,000 letters from soldiers and soldiers' widows from every State in the Union, and in this way, to my regret, have often learned that some partisan Members and Senators, too, have been seeking to poison the minds of these poor old men and women against the administration by telling them there was no chance to secure any pension legislation until there was a change of administration. I would rather belong to a party which may have some adherents who were not as strongly in favor of pensions as they should be than to a party with partisans of that low caliber. I might here say that all who are opposed are not Democrats by any means. I wish to say here and now that the Members and Senators of the South are entitled to commendation and not criticism. Naturally some do not feel so strongly in favor of this legislation as those from the North, where practically all of the beneficiaries reside, but with very few exceptions those from the South are friendly to pensions, and the few who are not are more magnanimous in withholding their opposition, I believe, than those who criticize would be were the conditions reversed. I believe no one is better qualified to testify on this subject than I am, for I have quite recently talked pensions to nearly every Member and Senator in this Congress. I want to here and now thank my good friends from the South in both the House and the Senate for the splendid consideration, chivalry, and generosity they have shown to me and to this bill. If we want a united country, and we say we do, for heaven's sake cut such converse.

I am quite willing to give credit where credit is due, and do not hesitate to say that I am indebted to Minority Leader MANN and the distinguished ex-Speaker, Uncle JOE CANNON, for their good support and assistance. Both of these gentlemen and many others on the other side were strongly in favor of this bill. I am glad to say as much for the Senator from Utah, REED SMOOT, and other Senators, but it is not politics of my kind to attempt to besmirch any political party in this way or to prejudice the old soldier.

Let us see for just a moment whether or not it is necessary to have a change of administration before the old soldier can expect any beneficial recognition. In the Sixty-second Congress my distinguished colleague, Gen. SHERWOOD, a Democrat, secured the passage of the Sherwood bill, which was the most generous general pension bill ever enacted into law for the Civil-War soldier. The House, which was Democratic, passed a more generous bill than finally became a law, because the Senate, which was Republican, refused to pass the House bill. Strike one.

I have the very great honor to be the author of the widows' pension bill, which passed the House on June 17 without a roll call and without a single word of opposition to the bill by any Democrat, and the South is said to be in the saddle. The Senate to-day passed the bill without roll call. I refer to the debate on the bill, found on pages 13957 to 13961, inclusive, of the RECORD, for evidence of a single word of opposition to the bill by the so-called pension haters of the South. The only southern Democrats who spoke on the bill were Senator HOKE SMITH, of Georgia, and Senator VARDAMAN, of Mississippi. Senator HOKE SMITH assured me several days before the bill was passed that he was in favor of it and would gladly speak in favor of it, and the RECORD is in evidence that he did. The RECORD is also in evidence that the following Democratic Senators were in favor of the bill: Senator TAGGART, of Indiana; Senator OLLIE JAMES, of Kentucky; Senator KERN, of Indiana, the Senate leader, Senator STONE, of Missouri; Senator OWENS, of Oklahoma; Senator MYERS, of Montana who offered an amendment to lower the $20 age limit from 70 to 60 years but which was rejected by vote; Senator CHILTON, of West Virginia; Senator THOMAS, of Colorado; and Senator THOMPSON, of Kansas who offered an amendment to lower the age limit from 70 to 65 and which was objected to by Senator GALLINGER, the Republican leader. Not a word appears in the RECORD unfriendly to this bill. It is only fair to the Republicans to say that Senator SMOOT, of Utah; Senator NELSON, of Minnesota; Senator CURTIS, of Kansas; Senator JONES, of Washington; and Senator CLAPP, of Minnesota, spoke in favor of the bill and no Republicans opposed it. A single Senator could have defeated the bill but no southern or northern Senator cared to assume that responsibility. Strike two.

The House has also passed the Key bill, which provides for a pension of $12 per month for Spanish War widows, and Senator LEWIS, of Illinois (Democrat), has given notice to the Senate that he will press the bill to its final passage when Congress meets next December. Strike three with KEY at the bat and due to make a home run.

The present Congress has, I believe, passed more special pension bills than at any previous session of Congress. Every pension bill has been passed without roll call or opposition of any kind. Does this look like it was necessary to have a change of administration before the old soldiers can expect anything from Congress? I leave it to the soldiers and the country to answer.

I believe this canard circulated by a few Republican partisans and agitated by a partisan press has been successfully refuted. Those Republicans who resort to this sort of politics usually promise most and have least regard for the fulfillment of their pledges. In my old McGuffey's Reader I well remember the story, which made a deep impression upon my mind, of the poor blind man who begged alms of two boys playing by the roadside. One of the boys was a braggadocio, who had rich parents, wore good clothes, and had plenty of money. The other boy was poor and wore ragged clothes, but had a good heart. The rich boy tossed several pennies to the blind man, promised more, and turned away, likely never again thinking of the old blind man. The pennies fell in the grass. The poor boy fell on his knees and hunted until he found the pennies and then kindly placed them in the blind man's hand. No doubt these partisans are some kin to the good-clothes boy. They blow and bluster what they will do, but promises do not feed and clothe the old soldiers and their poor old widows, but the Sherwood bill and the Ashbrook bill does. I hope, however, these observations will not be considered as directed to all Republicans, but only to those Members and Senators who have made unfair and partisan statements to prejudice the minds of the people, and especially the old soldiers.

Now, as to the provisions of this bill. The Senate Pension Committee made a few amendments to the House bill, the most important of which was to raise the marriage restrictions to the date of the passage of the bill. Senator JOHNSON, of Maine, who is the chairman of the Senate Pension Committee and one of the best friends the old soldiers ever had, was responsible for this amendment, and I would have been very glad to have had the amended bill passed. Certain Senators objected to the amendment, and rather than risk the defeat of the bill, the amendment was rejected and the bill was passed practically the same as it was when it left the House. President Wilson has signed the bill, and it is now the law of the land. I am proud to be the possessor of the pen used in signing this splendid piece of legislation. Truly the pen is mightier than the sword. This pen made tens of thousands of happy hearts and homes, while the sword, which doubtless would have been used had it not been for this great peace-loving President, would have brought sorrow, want, and desolation to countless thousands. The new law reads as follows:

[Public, No. 278, 64th Cong.]

An act (H. R. 11707) to amend an act entitled "An act to increase the pensions of widows, minor children, etc., of deceased soldiers and sailors of the late Civil War, the War with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late Civil War," approved April 19, 1908, and for other purposes.

*Be it enacted, etc.*, That from and after the passage of this act the rate of pension for a widow, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, who was the lawful wife of any officer or enlisted man in the Army, Navy, or Marine Corps of the United States, during the period of his service in the Civil War, shall be $20 per month, and the rate of pension for a widow of an officer or enlisted man of the Army, Navy, or Marine Corps of the United States who served in the Civil War, the War with Mexico, or the War of 1812, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereafter provided, who has reached or shall hereafter reach the age of 70 years shall be $20 per month; and nothing herein shall be construed to affect the existing allowance of $2 per month for each child under the age of 16 years and for each helpless child; and all acts or parts of acts inconsistent with the provisions of this act are hereby repealed: *Provided, however*, That this act shall not be so construed as to reduce any pension under any act, public or private.

SEC. 2. That any widow of an officer or enlisted man who served in the Army, Navy, or Marine Corps of the United States during the Civil War whose name was placed or shall hereafter be placed on the pension roll, under any existing law, and whose name has been or shall hereafter be dropped from said pension roll by reason of her marriage to another person who has since died or shall hereafter die, or from whom she has been heretofore or shall be hereafter divorced upon her own application and without fault on her part, shall be entitled to have her name again placed on the pension roll at the rate allowed by the law under which she was formerly pensioned, and the law or

laws amendatory thereof, unless she be entitled to a greater rate of pension under the provisions of section 1 of this act, such pension to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *Provided, however*, That where the pension of said widow on her second or subsequent marriage has accrued to a helpless or idiotic child, or a child or children under the age of 16 years, she shall not be entitled to renewal under this act unless said helpless or idiotic child, or child or children, under 16 years of age, be then a member or members of her family and cared for by her, and upon the renewal of pension to said widow payment of pension to said child or children shall cease: *And provided further*, That the provisions of this act shall be extended to those widows, otherwise entitled, whose husands died of wounds, injuries, or disease incurred during the period of their military or naval service, but who were deprived of pension under the act of March 3, 1865, because of their failure to draw any pensions by reason of their remarriage, and to any person who was lawfully married to an officer or enlisted man, who served in the Army, Navy, or Marine Corps of the United States during the Civil War and was honorably discharged therefrom and has since deceased, and who, having remarried since his death is again a widow, or has been divorced from her last husband upon her own application without fault on her part and who, otherwise entitled, was barred by reason of such remarriage from receiving pension under any existing law.

SEC. 3. That any widow, as described in section 2 of the act approved April 19, 1908, who married the soldier or sailor prior to June 27, 1905, shall have title to pension under the provisions of said section of said act, to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *Provided, however*, That where a pension has been granted to a soldier's or sailor's helpless of idiotic child or children, or child or children under the age of 16 years, his widow shall not be entitled to pension under this section, unless the pension to such child or children has terminated, or unless such child or children be a member or members of her family and cared for by her, and upon allowance of pension to the widow, payment of pension to such child or children shall cease.

SEC. 4. That no claim agent or attorney shall be recognized in the adjudication of claims under the first section of this act, nor shall any claim agent or attorney be recognized in the adjudication of claims under the second section of this act for renewal of pension previously allowed, and in claims for original pension under section 2 of this act no greater sum than $10 shall be allowed for services in preparing, presenting, or prosecuting such claim, which sum shall be payable only upon the order of the Commissioner of Pensions under such rules and regulations as he may deem proper to make.

Approved, September 8, 1916.

Briefly it raises the marriage restrictions from June 27, 1890, to June 27, 1905, 15 years. It restores to remarried widows their former pensionable status regardless of other marriages. Widows who have been or may be divorced without fault on their part are also entitled to a pension. All such widows under the age of 70 are entitled to $12 per month and all over 70 are entitled to $20 per month. All widows who were the wives of soldiers during their service are entitled to $20 per month whether 70 years of age or not. Widows of all wars, except the Spanish War, are beneficiaries, including Civil, Mexican, Indian, and the War of 1812, of which there are still a few survivors. All widows who are now on the pension roll will not be required to file another application, and their increase begins from the date of the law, to wit, September 8, 1916. They will be required to prove their age in order to receive the $20 in the same way as soldiers under the Sherwood law. Those who are not now on the pension roll and who are beneficiaries under this bill must file an application. Pension agents and attorneys are allowed to charge a fee of $10 for original claims, but can make no charge for those who are now pensioners. I expect to remain here, Mr. Speaker, for some days to look after the claims of the poor old widows who reside in my district. I do not care to be subject to the same criticism as the boy who threw the pennies in the grass to the blind man. I know that Members generally will gladly assist these needy and dependent old women to secure the benefit due them under this act. Those who most need our help should first have it.

No one is benefited by this act but women, and but few who are not old and but few who are not dependent—those who once were wives but now are widows with no one to depend upon for their support. Their husbands were soldiers—and did you ever stop and seriously consider what it means to be a soldier? Men run risk to gain honor and fortune, but he is indeed a fool to risk his life for either or both. When he offers his services to his country it is not for fortune—$15 per month—and few care to be a dead hero. He offers his life for the love of country—not his country, but our country. Many lose their lives on the battle fields, others return to their homes maimed and diseased. Some, mayhap, are more fortunate, but all ran risk alike. The beneficiaries of this bill are the wives of our soldier dead. They gave birth to the children who are proud to be sons of veterans and who would be first to answer their country's call to emulate the patriotic example of their heroic sires. These wives and mothers—and who does not softly and sacredly speak the name of mother?—cared for these old soldiers during their declining days. They gave them the tender care and devotion which was their just due, and they are entitled to this statutory recognition and relief so freely and generously given.

The humble part I have taken swells my heart with pride. Let us sing America and the Doxology and be assured of the fact that there will be a chorus of a half million tremulous but happy voices join with us from ocean to ocean, from Lakes to Gulf, of these poor, old women whose hearts are full to overflowing with joy and gratitude to the Members of the Sixty-fourth Congress.

## Publicity of Income-Tax Returns.

### EXTENSION OF REMARKS
OF
### HON. CORDELL HULL,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, September 6, 1916.*

Mr. HULL of Tennessee. Mr. Speaker, when the revenue bill containing the present income-tax law was recently pending in another body, an amendment was offered and seriously supported by speeches on the part of two or three gentlemen providing that all income-tax returns should be filed in the office of the Commissioner of Internal Revenue and should constitute public records and be open to inspection as such by all persons. The real question which this amendment raised was not referred to in the course of the discussion by the speakers on either side of the controversy. As an abstract proposition, the matter of making these returns public to all people at all times would seem entirely plausible and proper, although it is true that these returns naturally contain some business facts, the disclosure of which it is earnestly claimed would operate detrimentally to the business of a given taxpayer. This, however, is not the question deserving serious consideration.

The overshadowing fact, universally known and recognized, is that the general property tax systems of the States have in most cases in a great measure broken down. Under these State property tax systems urban real estate and intangible personalty escape, to a great extent, their fair proportion of taxes. Less than 20 per cent of all personalty and less than 10 per cent of all intangible personalty, on the average, is reached for taxation under these State systems. Real estate reached averages less than 50 per cent. The result is that in order to get some substantial revenue the States have raised their tax rates as the taxpayer has reduced the amount and value of his property given in for taxation. An honest taxpayer is, therefore, severely penalized when he gives in the full amount and value of his real and personal property. The State systems have become so inequitable and grossly unfair in their operation and effects as to be, in many respects, almost unbearable to the taxpayer who seriously attempts to comply with their provisions. The result is widespread and universal evasion in most of the States. The tax rates—State, county, and municipal—average around $2.50. The proposal to make the income-tax returns public carries with it the purpose of furnishing to every tax official of each State and its subdivisions all the facts contained in such returns. For example, an income-tax payer, owning $100,000 of bonds, notes, or like securities bearing 6 per cent interest, and making an honest return of income to the Federal Government, but who, in common with taxpayers generally, at the same time gave in his personal property for State and local taxation at less than 20 per cent, would at once be pounced upon by the local tax officials and required to pay $2,500 State and local taxes, which would constitute more than 40 per cent of his annual income of $6,000. He would doubtless also be back assessed for five years in a like amount. In the meantime all taxpayers other than those subject to the income tax would continue to disregard the State property tax laws as they now do. Naturally, when an income-tax payer who otherwise would be ready and willing to return his full income to the Federal Government to be subjected to an honest and fair tax should find that the State, in effect, was practically confiscating his capital it can not be supposed that he would fail in every possible way to evade the income-tax law of the Federal Government, just as all taxpayers have been evading the State general property tax laws, should he be confronted with the publicity of income-tax returns.

When we consider the broken-down condition of these State property tax systems and the wholesale manner in which they are disregarded on account of the extreme high rates imposed the real effect of the proposal to make public the income-tax returns is to make some 40 discredited State property tax systems, carrying virtually confiscatory rates, a part and parcel of

the Federal income-tax law, so far as its efficient administration is concerned. It does not require much stretch of reason or imagination to discover what would happen in this event. Many States have the fullest degree of publicity of the tax returns of their citizens, but the property tax systems of these very States have broken down just as rapidly and fully as those of other States not having the same degree of publicity. Some one has suggested that to make the Federal income-tax returns public might compel the income-tax payers to repeal these State tax systems and their high rates and to put into operation just and equitable State tax systems.

This is good in theory, but the income taxpayers would have to possess unusual power and influence to accomplish the desired end. How is it expected that the limited number of income taxpayers could control a majority of the 15,000,000 voters of the different States and induce them to revolutionize and reform their respective property-tax laws on account of the dilemma in which publicity of their returns may have placed those subject to the Federal income tax? These income taxpayers would first be obliged to have State constitutional conventions called and new constitutions adopted in many cases.

Wisconsin for some years has had in operation the only successful State income-tax law in this country. In 1915 this law still retains, without objection so far as I have learned, a provision requiring secrecy of returns under severe penalties. The provision is very similar to the provision in the Federal law, and is found in section 1087m—24, paragraph 2. The present provision of the Federal law was contained in substance in all former income-tax laws, and in the corporation excise law of 1909. It would be practical and desirable at the present for the Federal Government to furnish in confidence to State tax officials both individual and corporation returns for the purpose of administering State income-tax law not imposing excessive rates. Later, when the States shall have reformed their property-tax systems and substituted equitable tax laws, the fullest and freest cooperation between the States and the Government, with respect to the collection of income, inheritance, and other taxes, would be highly desirable.

I am unable to reach any other conclusion than that this purpose and effort to make the Federal income-tax law perform the wonderful feat of creating new and equitable State tax laws, however desirable, would only result in discrediting the Federal law and measurably breaking it down to the same level of our present State property-tax systems.

## The Mexican Situation.

### EXTENSION OF REMARKS
OF
### HON. JOHN H. STEPHENS,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. STEPHENS of Texas. Mr. Speaker, the Republican candidate for President, Mr. Hughes, and his party associates in this House and elsewhere, having no good affirmative reason to give to the country why Mr. Wilson should not be reelected President of the United States in November, have selected the present Mexican situation as one of their leading issues. The charge is that our Army under Gen. Pershing is remaining in Mexico without any justifiable cause. Now, let us see if this is true. On Saturday, September 2, 1916, the El Paso Herald, a very reputable Republican Journal, published at El Paso, Tex., on the border of Mexico, explains the reason and necessity for our Army remaining in Mexico as follows:

[From the El Paso (Tex.) Herald, Saturday, Sept. 2, 1916.]

PANCHO IS COMING NORTH.

Pancho Villa is coming north. On the American border that news partly obscures the fact that several nations have declared war, that a king has given up his throne, and that several men are running for President in the United States.

According to semiofficial dispatches from Chihuahua City, based on information received from a Villista, Pancho intends striking another blow at the United States. Columbus hears he is headed for Namiquipa, which would bring him almost in touch with Gen. Pershing's advanced posts at El Valle.

In either event, Villa is courting danger. If he is still seeking trouble, he will be amply obliged by attacking either the American border or the American punitive expedition, and there is some reason to believe he can obtain the same result by coming within range where the American troops can attack him.

Just what rash impulse Villa is obeying in moving north is not clear. Perhaps he needs ammunition and is coming to the border to get it. Perhaps he has supplies cached in western Chihuahua. Perhaps, in order to hold his men, he has to make a demonstration against the United States. Perhaps, in view of the imminent meeting of the American and Mexican commissions for the adjudication of disputes between the United States and Mexico, he thinks now is the time to spill the beans. Perhaps it is just the old dare-devil spirit cropping up again, indicating that Pancho is regaining his health.

Whatever the motive, here is hoping the United States troops may have an opportunity of coming into contact with the bandit. If Gen. Pershing could kill Pancho and his followers, the expedition could leave Mexico with some elation.

Mr. Speaker, the same paper, on September 6, 1916, published the following telegrams in relation to the same matter, viz:

PERSHING TO SEEK VILLA—UNITED STATES TROOPS WILL WORK WITH DE FACTO FORCES IS REPORT.

COLUMBUS, N. MEX., *September 6.*

Gen. J. J. Pershing, commander of the American punitive expedition, left for his base in Mexico to-day after an inspection of all troops in his zone.

SAN ANTONIO, TEX., *September 6.*

If Francisco Villa gets within striking distance of the American expeditionary force Gen. Pershing's soldiers may join troops of the de facto government in an offensive campaign to exterminate the bandit and his followers. This was the statement of Gen. Funston this afternoon.

These editorials and the more recent telegrams show conclusively that there is now a pressing present necessity for our forces under Gen. Pershing remaining in Mexico so as to cooperate with the Carranza de facto forces and defeat the Villa bandit forces and thus prevent another Columbus massacre.

The hypocrisy of the Republican contention that our Army should immediately be withdrawn from Mexico, or should have never been sent there, is made apparent to everyone except to faultfinding, blind Republican partisans. If the President had withdrawn the Pershing punitive expedition from Mexico his critical Republican adversaries would have likewise condemned him.

Mr. Speaker, the fact is that the Republicans have not now, and have never had, any definite policy or alternative to offer in place of the present Mexican policy of President Wilson. The New York Times hits the nail on the head when it says that "the Republican Party is all at sea on the Mexican question"; its only policy is to differ with the President and find fault with everything he does or proposes to do.

Mr. President, Mr. Samuel Gompers, the president of the American Federation of Labor, in his Labor Day speech in this city a few days ago, truthfully and justly sized up the Mexican situation as follows, viz:

The international issue that now comes closest to the labor movement is the policy of our Government toward Mexico. The cause of humanity is in the balance in Mexico. The people there are trying to work out their own problems and to establish their own ideals of political, social, and economic justice. The labor movement in Mexico has developed; that is, the most power and the most constructive product of the revolution. Representatives of the labor movement of Mexico have joined the representatives of the labor movement of America to insure to the workers and citizens of Mexico the rights of human beings, opportunities for freedom and for independence. Many of the problems of the Mexican workers are problems of the workers of the United States. Their welfare is our welfare. The boundary line between the two countries is only an artificial division that has little or no effect upon the course and the nature of industrial and commercial development.

CONDITIONS ON THE BORDER.

The problem of industrial welfare in the States of the Southwest is largely a Mexican problem. With low standards of life and work prevailing upon the 15,000,000 of Mexicans, there exists an obstacle to the establishment of higher standards within the United States. There are capitalists and exploiting interests of the United States who, because they have property in Mexico—often corruptly and dishonestly obtained—desire to maintain governmental agencies by which they can hold the people in subjection and deny to them the opportunity for protecting themselves through the organized labor movement and other opportunities for growth and development. These selfish exploiting interests are concentrating their political power in the present campaign to secure a different policy on the part of our Government toward Mexico. Even under the guise of intervention, no matter how unnecessary and unwarrantable, the advocates of that policy really aim at the conquest and annexation of Mexico. A few of the most reckless, such as the Otis and Hearst interests, come out brazenly in the demand for intervention, invasion, conquest, and annexation of Mexico. Of course every effort must be made to safeguard the lives and the property of our people living along the border line, but who can honestly say that the Mexican marauders were the only offenders. The allied forces of greed and profit would deny the Mexican people the opportunity for their development; they would gladly embroil the United States in an unnecessary and unwarrantable war with Mexico. To them property, property rights, profits are held far more sacred than human beings, international honor, and human liberty.

These are some of the issues that primarily concern the workers and all liberty-loving citizens of the United States; they are the issues upon which every wage earner, every citizen, will make his own decision, not only in his everyday activity but also at the polls on election day.

Mr. Speaker, let us turn to the moral and commercial side of this Mexican embroglio and see how one of our great journals views this question:

The New York Journal of Commerce makes allowances for the inexperienced officials who had the Mexican problem thrust upon them at the very beginning of the administration; but, despite "many errors," the end they held in view was and is a desirable end—to avoid intervention and conquest. It deprecates any attempt to make the problem a partisan issue. Such a course is likely to affect our interests and

Mexico's, if not the interests of all the Republics of the continent, in a more vital way than the European war will affect them. The only way to make such an issue, it asserts, is to declare for a different policy and that "can only mean a policy of forcible intervention and coercion." The New York World is not content with an attitude of defense of Wilson's policy. It assumes the offensive by asserting that in their attacks on that policy the Republican Party and Mr. Hughes are "now in partnership on that issue with every foreign exploiter of the Mexican people and with every German fomenter of American intervention." The World goes on to maintain that President Wilson's Mexican policy is identical with Lincoln's and does not differ essentially from Taft's. "Does Mr. Hughes purpose to repudiate Lincoln and Taft in order to follow William R. Hearst and Senator FALL"?

Mr. Speaker, the action of this administration on the Mexican situation is in strict accord with the Democratic platform of this year. That platform declares that—

The Monroe doctrine is reasserted as a principle of Democratic faith. The doctrine guarantees the independent Republics of the two Americas against aggression from another continent. It implies, as well, the most scrupulous regard upon our part for the sovereignty of each of them.

The want of a stable, responsible government in Mexico, capable of repressing and punishing marauders and bandit bands, who have not only taken the lives and seized and destroyed the property of American citizens in that country, but have insolently invaded our soil, made war upon and murdered our people thereon, has rendered it necessary temporarily to occupy, by our armed forces, a portion of the territory of that friendly State. Until, by the restoration of law and order therein, a repetition of such incursions is improbable, the necessity for their remaining must continue.

Intervention, implying, as it does, military subjugation, is revolting to the people of the United States, notwithstanding the provocation to that course has been great, and should be resorted to, if at all, only as a last resort. The stubborn resistance of the President and his advisers to every demand and suggestion to enter upon it is creditable alike to them and to the people in whose name he speaks.

Mr. Speaker, the Washington Post, on June 17, 1916, editorially speaking on this question, agrees with this contention of the Democratic platform and says:

IF INTERVENTION SHOULD COME.

Diplomatic representatives of several Governments are reported to have made inquiries recently at the Department of State concerning the intentions of the United States toward Mexico, and particularly as to the possibility of intervention. These representatives are said to have expressed the solicitude of their Governments in the matter and to have extended an offer of good offices in the hope of effecting a mutually satisfactory arrangement between the United States and Mexico which would avoid intervention.

There is no desire to intervene in Mexico, so far as public opinion has expressed itself in this country. The latest expression is by the Democratic national convention, which deprecates intervention and holds that it should be avoided if possible. There does not appear to be any difference of opinion on that score. Probably men of every political party would subscribe to the Democratic sentiment.

The Current Opinion, a nonpartisan literary journal, in its current issue makes the following statements relating to the President's Mexican policies, and I fully agree with the writer's observations and conclusions. They are as follows, viz:

[From the Current Opinion for September.]

WHY SECRETARY LANE IS "MOST PROUD" OF OUR MEXICAN POLICY.

One defense of the President's Mexican policy that has attracted much attention is that made several weeks ago in an interview in the New York World by Secretary Lane. Mr. Lane began by declaring that this policy is one of the things of which, as a member of the administration, he is most proud, for it shows so well the President's "abounding faith in humanity, his profound philosophy of democracy, and his unshakable belief in the ultimate triumph of liberty, justice, and right." That policy, we are assured, has not been weak and vacillating. "It has been definite and consistent, firm and constructive. How firm is already known to those who have sought to force American intervention in Mexico; how constructive will best be appreciated 50 years from now by the whole world." The foundation of our policy has been sympathy in place of force. Fundamental reforms must be effected before Mexico can become a good neighbor, but, to be lasting, they must come from the inside. We can not effect them unless we are prepared not only to conquer Mexico but to annex it as well. Recognition of Huerta would not have pacified Mexico. Huerta himself was a prisoner of the reactionaries and did not dare to leave the capital except to take a ship and flee. To have recognized him would have been an injustice not only to Mexico but to all South and Central America. Gradually, as a result of the Monroe doctrine, there is growing up in the New World a civilization that will make old-time revolutionary methods impossible.

"We have so amplified the Monroe doctrine that we are virtually the copartners of the Republics to the south of us, and to proclaim that the violation of their constitutional laws would not in the slightest interfere with our recognition of a conspiracy to murder lawful executives and overthrow their established republican forms of government would have been rightly considered by the American people as the most cowardly and short-sighted policy imaginable. Condemnation would have arisen not only from the people of the United States, but from all the nations of the Pan American Union."

WHY WE WENT TO VERA CRUZ.

Perhaps the most significant thing said by Mr. Lane was his statement that "we did not go to Vera Cruz to force Huerta to salute the flag; we did go there to show Mexico that we were in earnest in our demand that Huerta must go, and he went before our forces were withdrawn."

Mr. Speaker, last year President Wilson sought to settle this vexed Mexican question by the aid of a delegation from this country and several of the South American Republics, which met at his request in Canada, a like delegation from Mexico. This conference failed to result in any definite settlement. Again this year he has succeeded in having three commissioners from each country to meet at New London, Conn., for the same purpose. They are now in session at that place. The following newspaper report from the Washington Post sets forth some of their proceedings, and is as follows, viz:

[From the Washington Post, Sept. 7, 1916.]

COMMISSIONERS REVIEW GROWTH OF CONSTITUTIONAL POWER—SESSION LASTS THREE HOURS—CABRERA PRESIDES AND OUTLINES PURPOSES OF CARRANZA DELEGATES—DE FACTO GOVERNMENT HAS GAINED STRENGTH DAILY SINCE RECOGNITION, SAYS JOINT STATEMENT.

NEW LONDON, CONN., *September 6.*

An exchange of views, in which consideration was given to the "growth, control, and strength of the constitutional government" in Mexico, marked the first formal conference here to-day of the Mexican and American commissioners appointed to bring about an amicable and permanent settlement of international difficulties.

A summary of the proceedings issued at the conclusion of the meeting alluded to the de facto Mexican Government as having "become every day stronger during the last two years and in particular since the recognition" of the government.

CABRERA OUTLINES PURPOSES.

This summary, agreed upon by Luis Cabrera and Franklin K. Lane, chairman of the Mexican and American delegations, respectively, follows:

"This morning's session lasted three hours, from 10 to 1, during which Mr. Cabrera presided. The first matter of importance was the presenting of mutual credentials. In accordance with the Mexican form of opening conferences, Mr. Cabrera made a declaration of the purpose of the Mexican members of the commission, saying it was their duty to fulfill in every way possible the great responsibility cast upon them by First Chief Carranza and that they all stood committed to giving their full powers to bringing to a conclusion this conference in such a manner as would be most profitable to Mexico and the United States.

"After that, Mr. Cabrera stated that it was the desire of the Mexican members of the commission that the fullest information should be given to the commission regarding all matters involved, and that they were quite ready to meet the Americans in a spirit of utmost frankness.

PROGRESS IN MEXICO REVIEWED.

"The members of the commission then exchanged views in general about the situation in Mexico, and especially on the border, with the view to making a preparatory study of the subject. During the conference the commissioners reviewed the growth, control, and strength of the Constitutional Government, which has become every day stronger during the last two years, and in particular since the recognition of the constitutional de facto government, showing that order was being established throughout the Republic, railroad service being extended," etc.

The six commissioners and two secretaries attended the conference, at the conclusion of which the party returned to the presidential yacht *Mayflower* to spend the afternoon cruising. The next meeting will be held on Friday.

Mr. Speaker, the most commendable and yet the most severely criticized act of President Wilson's administration relating to Mexico is his refusal to recognize Huerta as the President of Mexico. If he had done so, this Government would thereby have recognized all of the acts, lawful or unlawful, committed by him after such acknowledgment; and it is well known that Huerta when deposed was preparing to validate many large oil, mining land and other grants made by his pretended government to many wealthy corporate and private despoilers of the people of Mexico. Under the Monroe doctrine this Government, if it had recognized Huerta, would have thereby made itself morally, if not legally, bound to have forced the Mexican Government to make these grants good at some time in the future. President Wilson in refusing to recognize Huerta has done both the people of Mexico and this country the greatest possible service. Mr. Speaker, many of the Republican Members of Congress have by their votes indorsed the President's action in keeping out of war with Mexico, and all other nations as well; and having thus voted, are they not now estopped, in honor at least, from condemning the President for doing the very things that they have by their votes, in their respective Houses, indorsed?

Mr. Hughes in his recent speeches likewise repudiates and denounces many of the wise laws passed by the Democrats during this administration. Among the measures so denounced by him are the preparedness measure, for which over $600,000,000 are to be expended; yet he says this amount is insufficient to properly defend this country from foreign invasions, and in the next breath he denounces this administration for extravagance. It seems to be impossible for a Democrat to please this hypercritical fault-finding office seeker.

Mr. Hughes will have a difficult time evolving any issue that will not entail a repudiation of many of the congressional leaders of his own party.

If he thinks it expedient to adopt a strong attitude on the submarine controversy, which President Wilson settled by obtaining a full recognition of American rights under international law and bringing about the cessation of submarine warfare, he will have to repudiate the 101 Republican Representatives who voted against tabling the McLemore resolution and thus registered themselves in favor of a surrender of American rights. Incidentally, he will have to read out of the Republican Party the 12 Republican United States Senators who voted against

tabling the Gore resolution, which involved a similar surrender when President Wilson was forcing the recognition of American rights.

There were 12 Republicans in the Senate who voted for the administration's trade commission bill, and, while there was no record vote in the House, several score Republicans voted for the trade commission bill there.

The Republican Party in its platform has indorsed the tariff commission method of handling the tariff. Before that plank was adopted by the Republican Party, the Democratic administration had introduced the Rainey tariff commission bill in Congress, and it will become a law in a few weeks. And the Chamber of Commerce of the United States, representing the business men of the Nation, Republican and Democratic and Progressive, has indorsed the Rainey bill.

One hundred and twelve Republicans and four Progressives voted with the Democratic majority for the good roads bill in the House. One hundred and four Republicans and three Progressives voted for the administration's rural credit bill.

If Charles E. Hughes, the Republican candidate for President, makes an issue of the Federal Reserve System, established by the Democratic administration, is he going to read out of his party the 33 Republicans who voted for the measure in the House?

Will he repudiate the 16 Progressives, the 1 Independent, and the Republicans who voted with the 248 Democrats in establishing the sound banking and currency law which has been approved by the public and the banking world?

Will he also repudiate the 7 Republicans who voted for the measure in the Senate?

Mr. Speaker, during the fair at Vernon, Tex., last October, ex-Gov. Colquitt, in a public address, viciously and unjustly attacked President Wilson's Mexican policy. I replied to his malicious mouthings and uncalled-for statements in an address the next day. I resolutely defended and upheld the Democratic administration and specifically approved President Wilson's Mexican policy. For some unaccountable reasons—mainly, I think, because we remained in Washington and did not go in person to Texas and defend the administration and ourselves—we, Senator CULBERSON and myself, were both defeated in the July Democratic primaries, Marvin Jones, of Amarillo, defeating me, and Colquitt defeating Senator CULBERSON. Under the laws in force in Texas, United States Senators can have a second primary—or run-off primary—while candidates for Congress can not. Jones received more votes than I, but did not receive one-half of the votes of the district, and could we have had a second election I could have defeated Jones as easily as CULBERSON defeated Colquitt.

Mr. Speaker, one of the most influential—Christian Science, nonpartisan—church papers in this country, in its last issue, has this to say editorially relative to Colquitt's defeat in Texas for the United States Senate. It is as follows:

TEXAS'S VERDICT.

The defeat of former Gov. Oliver B. Colquitt in the Democratic primaries just held in Texas makes certain the return to the United States Senate of CHARLES A. CULBERSON, now head of the Judiciary Committee, and one of the ablest of the legislative lieutenants supporting the President in his party and national policies. Under ordinary conditions the victory of Senator CULBERSON would indicate that Texas was remaining true to a tradition that makes the South count for more in national affairs than it otherwise might. The South is not so apt to insist on rotation in office as are the North and West. It tests men in the lower House, keeps them there for years, and usually selects its Senators from men who have shown themselves serviceable and sagacious as Congressmen. Texas lawmakers, therefore, get an increment of experience, a knowledge of the technique of government, and a weight of authority that make them influential even when its Senators and Congressmen are in "opposition." When, as now, they have the Executive with them, it is not surprising that legislative history is made at a fast pace.

Senator CULBERSON'S victory has been won under unusual conditions, which deserve notice. He has had arrayed against him all the dissentient elements of the border section of a State next to the Mexican line, because he has stood forth as a defender of the President's Mexican policy. Upon him also has been centered the opposition of those Texans who are of German origin and affiliations and are against the President because of his foreign policy. That this large and influential section of the electorate is unanimous in this attitude is not true. But it is known that Senator CULBERSON was not so satisfactory a candidate to many voters of this group as was his rival. The latter had formally indicted both the Mexican and the European policy of the President, and generally was looked upon as an antiadministration candidate. His decided defeat indicates that the President is not to be disciplined or repudiated by the section from which he draws a large part of his strength in the popular and the electoral vote. If Texas as a whole supports his Mexican policy he need not, it would seem, be concerned about the coming action of other Southern States with less immediate interest in the controversy.

Senator CULBERSON'S victory in the primaries insures his reelection, so feeble is the Republican opposition in that Empire State. He has had a fight within his party to meet and defeat, and, victorious now, he will not know later the rigors of a contest such as his associate, Senator CHARLES F. JOHNSON, of Maine, has been passing through. Mr. CULBERSON'S triumph, nevertheless, has been more than ordinary, for he has stood by his party chief and his policies when the President has needed stanch friends, and he has given his party associates in Texas a chance to show that they take a national view of contemporary duties of the State.

Mr. Speaker, the Times, published at Wichita Falls, Tex. has this to say in an editorial in regards to Colquitt's defeat:

A NOTABLE VICTORY.

The "run-off" Democratic primary was held in Texas on August 25. The result was a notable victory for the administration. Mr. Colquitt, who was high man in the regular primary, suffered a loss in his vote, and Senator CULBERSON, who was second in the regular primary, was renominated by more than 75,000 majority.

Senator CULBERSON carried every border county, with one exception. This fact is notable for the reason that Mr. Colquitt was an ultra-advocate of Mexican intervention. He also had the active support of the German Alliance and German politicians. The people of the border counties declined to support him, while many of the German-Americans in Texas evidently refused to follow their false leaders.

Surely there must have been some change of sentiment since the July primary. Then Colquitt had a lead over CULBERSON of more than 32,000. In the later primary Colquitt lost approximately 35,000, while Senator CULBERSON won more than 60,000.

To be sure, some of this gain is to be accounted for by the dropping out of three other candidates, whose vote went to CULBERSON, but not all of it is explained on that line. Much of it indicates a pronounced growth of administration popularity during the last 60 days.

Mr. Speaker, the wisdom of the course pursued by President Wilson in recognizing Gen. Carranza as the chief power in Mexico and in refusing to recognize Huerta is made apparent at the present time in this, that the condition of Mexico is to-day far better than at any time since Huerta had Madero murdered and declared himself the dictator of Mexico.

The El Paso (Tex.) Herald, on the 8th day of this month, in an editorial, publishes the following statement:

INCREASING THE MEXICAN TAX BURDEN.

The Carranza government is showing some evidences of a desire to rehabilitate Mexico to the end that a stable government may be reestablished. The reported return of confiscated properties to their owners, the extension of amnesty to certain classes of citizens who had been thought proscribed forever, the reversion of railroads to the companies which own them, and the invitation to mining corporations to resume operations are instances in point.

The latest decree of Gen. Carranza, increasing taxes, shows that the first chief and his advisers feel the need for getting cash in the treasury through lawful means to meet current governmental expenses and to provide for paying the interest on national obligations which otherwise will soon be pressing heavily.

On the 6th day of this month the same paper published the following telegram, viz:

[From the El Paso Daily Herald, Sept. 6.]

TRADE BETWEEN MEXICO AND UNITED STATES, NEW RECORD.

NEW YORK, *September 6.*

A compilation of figures by the United States customs service shows that trade between Mexico and the United States in the year ending June 30 broke all records.

Imports from Mexico were $97,676,544 against $77,612,691 in 1915 and $92,690,566 in 1914, the former high record year.

Exports to Mexico amounted to $48,308,542, a gain of $14,000,000 over 1915 and $10,000,000 over 1914. Combining imports and exports, the total of 1916 was the largest in the history of the trade between the two countries, the exact figures for the year being $145,985,086, compared with $131,927,266 in 1913, the former high record year for commerce both ways. The figures do not include precious metals.

These statements by a Republican paper published on the border of Mexico evidences the wisdom of President Wilson's policies in Mexico, and will, we believe, be so received by the unbiased, thinking voters of this country in the coming November election, and I believe that his wise statesmanlike course will then be fully indorsed by his reelection.

Mr. Speaker, in conclusion I desire to present a recent magazine article from the pen of one of the ablest men in this country, Mr. David Starr Jordan, which article was published in the last issue of the Sunset (Cal.) Magazine, relating to the Mexican situation, and I fully concur in his conclusions as therein set forth. The article is as follows, viz:

WHAT OF THE NATION?—PACIFISM AND THE PRESIDENCY—THE MEXICAN REVOLUTION—SALVAGE.

[By David Starr Jordan, chancellor of Stanford University; director World Peace Foundation.]

PACIFISM AND THE PRESIDENCY.

Mr. Roosevelt is reported to have said the other day, on the nomination of Mr. Hughes, that "the only difference between the two nominees a barber could remove in 10 minutes."

This statement involves a profound truth. Mr. Hughes was nominated because the body of the people have the serious belief that the foreign policy he would represent would be in all essential respects identical with that of Mr. Wilson. He would honorably keep us out of war.

The people at large are in no mood for antics or heroics so far as our foreign policy is concerned. They uphold the protest against violations of international law which directly concern us, and they will not fight against Germany nor Mexico nor any other nation for the acts of their war-mad groups nor at the drop of the hat of any war-mad group of our own. The conception of honor which makes war inevitable is found in the duelist's code and is unworthy of a civilized nation.

In the matter of foreign relations, Mr. Wilson sails an uncharted sea. Every day matters may arise for which history furnishes no adequate precedent. Minor mistakes he may have made, in dealing with Germany or Great Britain, as well as with Mexico. But these errors, if such they be, have done no permanent mischief.

Mexico is giving promise of ability to solve her own problems better than we could solve them for her. The Pangermanist faction in the imperial councils, the group which plunged Germany into war and made "scrap paper" of international obligations, is out of power and in spite of a temporary recrudescence, seems permanently discredited. The fact that our Nation stands out of the conflict on a basis of international law and of friendship with all peoples will bank very large when the final settlement comes.

If we wish to find valid reasons for voting against Mr. Wilson, and I admit that there are some, we must not look for them in his foreign policy, for no one has yet suggested anything better. That he has, with honor, kept us out of war our people will hold to his credit. That Mr. Hughes under like conditions would probably do the same thing is the great reason why the rank and file of his party, against the will of the "old guard," insisted on nominating him.

It is easy to sneer at the pacifist in a world which has become war mad. But no man who is not believed to be pacifist at heart can in these days be elected President of the United States.

THE MEXICAN REVOLUTION.

The revolution in Mexico was an uprising against the very same type of medieval wrongs which provoked the French Revolution more than a century ago. The Mexico of Porfirio Diaz had its land in the possession of a few thousand persons, whose ancestors gained the titles through favoritism. The people were serfs, fixed to the land through debts beyond their power to liquidate, paid a few cents a day through group bosses or pardones. Huge estates were in the hands of religious societies. There were no free schools worth the name, no sanitation, and no outlook. The municipalities lost their freedom to act, being controlled by political chiefs, "jefes politicos" appointed by the President. Meanwhile enormous concessions, running into millions and hundreds of millions, had been granted to foreigners, in most cases with no consideration of any consequence. While Mexico is rich almost beyond compare in natural resources—oil, metals, agriculture, forests—no part of this wealth reached the Mexican people. It was all absorbed by "cientificos," "clericos," "concessionaries, bankers, and foreign corporations, British, American, and German. Some day, perhaps, an international judicial commission may have to decide on the validity of these holdings.

Meanwhile revolutions can not go backward. Mexico can no more go back to the days of Porfirio Diaz than France to the days of Louis XV. When the lid is off the brigand comes to the surface. The lid of justice was off in the days of Diaz and Carranza has not been able to get it put back. Meanwhile a great wound must heal from within. It is not for Carranza or any other leader to redeem Mexico. It is a problem for the Mexican people, and at it they are working assiduously. In the State of Yucatan 2,400 free schools exist now, as against 200 in 1914. In Yucatan the great estates have been purchased and divided among small farmers, these forfeiting their titles if they fail to cultivate the land. Prohibition has been introduced into some States, and baseball and "pelote" have taken the place of bull fights. The "jefe politico" has been everywhere abolished, and everywhere the "municipio" or township is rising to be a center of local development. Fourteen of the 27 States are following the example of Yucatan. Notable among these are Michoacan, Vera Cruz, Jalisco, Queretaro, and Aguas Calientes. The regions in more or less discord are the boundary States, as Chihuahua and Tamaulipas, the mining States where thousands of men are out of employment suffering from hunger until railways, mines, and smelters reopen, and the State of Morelos, where the untamed Indian, Zapata, has expelled or extirpated all property owners, Spanish or foreign. Our journals pay little attention to these matters; as a Mexican leader has observed, they give more notice to a chance holdup of a train than to the regeneration and pacification of a whole State.

So far as I can see, there are but three ways of helping—to give sympathetic, intelligent observation to her problems, to loan money or credit on terms not ruinous to the borrowers, and, most important, to give efficient help to her system of education.

## The Eight-Hour Law.

## EXTENSION OF REMARKS
OF
## HON. FRANK BUCHANAN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, September 4, 1916.*

Mr. BUCHANAN of Illinois. Mr. Speaker, the essential features of the eight-hour day for the protection of humanity have been so well established it would be a waste of time and space to undertake to enlarge upon them, but the application of the eight-hour day to the railroads is essential for the proper preservation of the physical and mental resources of the men employed in the great transportation service of the country, which is required for the safety of the traveling public and efficient service to the business world.

In my speech of August 11 (p. 12516 of the CONGRESSIONAL RECORD) I showed where the great brotherhoods of railroad employees had paid out upward of $98,000,000 in death and disability benefits. These organizations have done much for the uplift, the welfare, and the enlightenment of their membership. They have improved working conditions, relieved distress, and been great defenders of humanity.

On the other side, we have the great trusts of the country which control our transportation facilities, as the Stanley Steel Trust committee investigation disclosed that the directors of the Steel Trust had control of transportation lines capitalized at over $10,000,000,000. If that be true, the Rockefellers, the Morgans, and the other Wall Street crowd, representing the frenzied financiers of the country, of course, control in the main the balance of the transportation lines of the country.

We have an abundance of statistical and other information disclosing the methods of this crowd of financial and commercial pirates. On September 2, page 13682 of the CONGRESSIONAL RECORD, I pointed out to you how the Union Pacific Railroad Co. corruptly soaked over $80,000,000 of water into its standing indebtedness by paying the proceeds of a bond issue to its stockholders as an extra dividend. On the same day I called attention to the Pittsburgh & Lake Erie, a part of the Pennsylvania system, which on account of the enormous profits made in the last year increased its capital stock from thirty to fifty million dollars, which was distributed at a very profitable price to its stockholders of record. During the period from 1900 to 1910 alone, 18 representative railroads traversing all sections of the country gave away in bonuses to their stockholders the huge sum of $450,414,992, while 8 western roads distributed upward of $250,000,000 in the same way. Syndicates of bankers and financiers, formed by the small coterie of men who have been foremost in looting the roads of the country, have made enormous profits by stock manipulations and transactions. The tragedies of the New York, New Haven & Hartford, the Alton, and the "Frisco," which I pointed out in detail in my speech of August 11, are familiar to practically all of us. In the New Haven case alone the stockholders are now suing the officials of the road for the recovery of some $203,000,000, of which they were defrauded by the trickery and treachery of the "inner ring" of directors who controlled the operation of the roads.

As was to be expected, the prostituted public press rushed to the assistance of the big business crooks of the country who control the railroads, in defeating the men from securing equity and justice and, of course, these same corrupt newspapers will advocate an increase in freight rates if it can be shown by the juggling of the railroad corporations that the 8-hour day costs more than the 10-hour day. From their way of reasoning, it would be a miscarriage of justice to reduce the dividends on the billions of counterfeit capital known as watered stock that is being loaded on the railroads of the country.

You can be assured that the Chicago Tribune, with its supposed great influence, will do its best to secure a continuation of the robbery and plunder of the masses of the people by the big trust-owned transportation lines, as is indicated by the following editorial:

[From the Chicago Tribune, Aug. 5, 1916.]

POLITICAL TERRORISM AT WASHINGTON.

Representative ADAMSON, of Georgia, chairman of the Interstate Commerce Committee, seems to be breathing forth flame. He intimates that if the railroad managers do not accept the President's proposal a law establishing the eight-hour day will be passed by Congress.

The threat throws the situation which Mr. Wilson's peace diplomacy has developed into high relief. The American public would do well to observe it and let itself be heard emphatically. Mr. Wilson's control of Congress just before election seems to be complete, but the gravity of his blunder ought to arouse public opinion to a state before which even party subserviency will hesitate.

When this Georgia statesman threatens to force a wage concession of fifty millions on the railroads, which is eventually upon the public, he undertakes a responsibility Congress will think twice before assuming. Such a law, as the public will soon fully realize, is not a limitation of labor law but a wage increase pure and simple. Furthermore, unless explicitly restricted in its operations in favor of a small class of the highest paid wage earners in the country—an obvious injustice—it will force increases of pay for other classes of railroad employees to an amount which has been estimated at over $225,000,000.

And the enactment of such a law by Congress would establish morally the principle of the eight-hour basic day throughout the country, regardless of special conditions as to locality and industry.

If it be conceded that democratic industrialism is moving steadily toward shorter hours and higher pay, and liberals everywhere approve the tendency, only an ignoramus or a demagogue would dare to propose to force such a change at once, in defiance of our complicated structure of finance and industrial organization, national and international.

That such a threat should be made shows the quality of the statesmanship we are afflicted with at this moment in Washington. It is no exaggeration to say, what the country should lose no time in realizing, that the political manipulation by the President and his allies of the present wage controversy is a peril to the prosperity and peace of the Nation unprecedented for nearly a generation. Not only has the President struck a vicious blow at the principle of peaceful adjustment of industrial disputes, but he and his political supporters are threatening to force upon the country a precipitate revolution of economic conditions the consequence of which will be costly if not ruinous to every individual and every class in the country.

If ADAMSON'S threat were carried out, not only would the cost of transportation be raised by a staggering amount, thus raising the cost of living materially for every class from the day laborer up, but a period of industrial disorder would be inaugurated which would make short work of our present prosperity.

It is time that sanity appeared in Washington and the irresponsible terrorism of demagogic politics be brought to an abrupt close.

Of course the agents of the corporations have made many believe that the increase in freight rates received about a year ago was due to the increased cost of labor, but the fact of the matter is that the labor cost has been reduced 100 per cent in

the last 15 or 20 years, due to the increased productive power and efficiency of the railroad employees. Labor power is costing the railroads less and less in proportion to the value it creates, and it is estimated that a train crew now hauls over three times the tonnage it did a few years ago.

I am sincerely of the opinion that if the administration had kept its hands off this controversy, the railroad men would have secured the eight-hour day, with time and one-half for overtime, which would have resulted in a real eight-hour day. One of my reasons for forming this opinion was due to my association with some of the representative railroad men, who expressed the desire that Congress and the administration keep out of it, confident in the belief that if left alone they could secure their demands even without a strike. I am also firmly of the opinion that if the President in his first proposition to the brotherhoods had not mentioned an increase in freight rates, his proposition would not have been turned down by the representatives of the railroad companies; but, of course, when they pictured a fifty or one hundred million dollar increase the railroads were going to stand out and endeavor to secure legislation that would guarantee the increase as long as there was any indication that such legislation could be secured. After the President failed to get the representatives of the railroad corporations to agree to his proposition, they gave as their reason their firm stand for the principle of arbitration; which, of course, was deception, because the railroads have persistently refused to arbitrate with any labor organization which they considered not strong enough to enforce their demands. Their motto is, "Arbitrate with the strong and fight the weak." The representatives of the trusts of the country never have stood for any principle that was in the interest of humanity. Their main object in life is to extract from the public the greatest amount of money for the least possible service rendered, regardless of the effect of their system upon the welfare of the people of the country.

If the President would have lent his influence to the resolution that I introduced, providing that the President should take over the roads and operate them in case the companies failed to do so, the disaster to the public would have been easily averted, the men would have secured their demands, and it would not have cost anyone a penny, except that it might have deprived a few of these parasites upon our national progress of a small portion of the exorbitant profits they have been reaping from the people for many years. But, instead of this, the President comes to Congress recommending six distinct propositions, which if accepted as a whole would have been destructive to the interests of the organized workers of the country.

The 8-hour law was passed as an emergency measure, hanging on to it a provision providing for an "observation commission," as though the 8-hour day was something new that had to be tried out and experimented with, when, in fact, more than 20 per cent of the railroad mileage of the country is now operated under the 8-hour system as economically and with greater efficiency than those operating under the 10-hour day. We have also recently had a very exhaustive investigation by the Industrial Relations Commission, directed by Hon. Frank Walsh, a very able and conscientious gentleman, with sincere purposes in disclosing facts and rendering service to the great masses of the people; and one of the principal recommendations of that commission was the general adoption of the eight-hour day as an essential to the proper preservation of the physical and mental resources of the working masses.

We also have an abundance of information showing the enormous increase in the earnings of the railroads of the country. In a statement recently issued by the Interstate Commerce Commission it was shown that 155 of the largest roads of the country increased their net profits in 1916 over 1915 by over $278,000,000. Taking individual lines, we find that the "Soo" line earned 22 per cent last year; the Louisville & Nashville, 17 per cent; and the Chicago, Burlington & Quincy, whose president, Hale Holden, was chosen as the spokesman of the railroads in this controversy, earned over 20 per cent, and has spent in the last 15 years over $100,000,000 on extensions and improvements, paid for out of surplus earnings. The net profits of the railroads for the year ending June 30, 1916, is over four times the amount the railroads themselves say it would cost them to adopt the eight-hour day with time and one-half for overtime.

This ought to be sufficient information to convince anyone that the railroads could easily pay whatever increase resulted from this change, even the $60,000,000 that they claim it would cost; but, of course, their figures in regard to this are erroneous. There are three kinds of liars—the regular liar, the damned liar, and the statistician; and while figures will not lie, liars will figure. I claim, and it is concurred in by every practical railroad man I know, that the application of the 8-hour day will cost very little, if any, more than the 10-hour day; but by having this "observation commission" the corporations in control of the railroads of the country will see to it that in this experimental period the 8-hour day will cost all they claim it will. They will do this by overloading the trains and other trickery and chicanery, in the art of which they are past masters. I was opposed to this feature of the eight-hour-day bill, but, on account of being confronted with a great crisis and tie-up of the great transportation facilities of the country, which meant destitution and suffering, because I realized that, due to the conditions existing in Congress, it could not be passed otherwise, and, further, because the representatives of the brotherhoods agreed to it, I supported the bill.

However, I want to warn the organized-labor people now that they must be alert. The President of the United States is very insistent in his recommendations and, with the influence of the big-business interests of the country with him, he will be able to exercise a great power on Congress, and I will be pleasantly surprised if it is not undertaken to put his recommendations as a whole on the statute books of the United States before the Sixty-fourth Congress ends. His first recommendation is the "immediate provision for the enlargement and administrative reorganization of the Interstate Commerce Commission," and, judging from his last two appointments, Mr. Hall and Mr. Daniels—men who were committed to the railroad view—which appointments were made shortly before the recent 5 per cent increase in freight rates, which amounted to eighty or one hundred million dollars, it is reasonable to infer that this provision means the appointment of men who are in sympathy with the railroads and would favor another 5 per cent increase in rates.

The second and third recommendations provide for the enactment of the eight-hour day and the appointment of the "observation commission," which I have already referred to. In regard to the eight-hour day, of course, any friend of labor, especially under the conditions that existed, was in favor of the passage of legislation providing for the eight-hour day, but there is a great difference of opinion among representative labor men in regard to securing the eight-hour day by legislative enactment. The president of the American Federation of Labor has stated that he believes in securing improved working conditions by the activities of the workers through their organizations, excepting, of course, Government employees. That section of the bill in regard to railroad employees who are actually engaged in the operation of trains may cause litigation and keep the organizations in the courts for a number of years, with the additional expense caused thereby.

The fourth recommendation is "explicit approval by the Congress of the consideration by the Interstate Commerce Commission of any increase in freight rates to meet such additional expenditures by the railroads as may have been rendered necessary by the adoption of the eight-hour day, and so forth."; and the fifth, the most vicious, perhaps, of them all, suggests "an amendment of the existing Federal statute which provides for the mediation, conciliation, and arbitration of such controversies as the present by adding to it a provision that in case the methods of accommodation now provided for should fail, a full public investigation of the merits of every such dispute shall be instituted and completed before a strike or lockout may lawfully be attempted." This provision, according to the spokesman of the representatives of the brotherhoods in Washington, Mr. A. B. Garretson, can never be countenanced by the labor people.

The following is an extract from Mr. Garretson's statement before the Interstate Commerce Committee of the Senate when considering the recommendations of the President:

> As before stated, we have never recognized the legislative as the proper method for the establishment of the workday, but in this instance we have given in to those who have come to us in our adhesion to the passage of this eight-hour-day law accompanied by the requirements found in that section placing the wage, pending certain investigations, at this present rate, and we have only drawn attention to one other proviso therein. As it is framed, it seems to us, and it has been stated to us, that the only remedy for the men in the event the companies refuse to conform thereto under the law would be a suit for damages. That would be about as valuable to the membership as a compulsory arbitration act would be to a single individual, and he would stand just about as much show.
>
> If that was placed on the basis that all of the other enactments governing railway employees have been placed—that where violations take place suit would be brought by the Government, like in the safety-appliance act and in the hours-of-service act—then you have introduced a measure that has merit to make what we are swallowing at least more palatable. I say to you on behalf of these four brotherhoods that the passage of that act alone with these provisions furnishes the one agency that will produce an absolute settlement of the trouble involved, because it embodies what we accepted the first day, or the day after the President made his proposition, and waived more than 50 per cent of the judgment which up to that time had been to us a religion. As for the other measures, no influence that can be brought to bear on these organization will ever induce them willingly to accept that act, or what it describes.
>
> The CHAIRMAN. To what do you refer now?
>
> Mr. GARRETSON. The compulsory investigation act.

* * * * * * *

I want to place on record here the protest of every laboring man represented by these brotherhoods against the possible passage of anything that savors of making men stay at work during the period of what would happen here with the existing causes between the railways and their employees, assuming for the moment that a certain amount of disintegration would take place on the other side, or that they should play the game for all it is worth.

This, I might say, is the view of every representative labor man in the country. It is the one inherent principle from which they shall never recede.

The sixth recommendation provides for "the lodgment in the hands of the Executive of the power, in case of military necessity, to take control of such portions and such rolling stock of the railways of the country as may be required for military use and to operate them for military purposes, with the authority to draft into the military service of the United States such train crews and administrative officials as the circumstances require for their safe and efficient use."

Such legislation, in my opinion, would be most dangerous and vicious. It would be making a "czar" or a "kaiser" out of the President, putting in his hands the power to absolutely control any effort on the part of the wage workers of the country to improve their conditions, and finally, the President says, "We should make all arbitral awards judgments by record of a court of law in order that their interpretation and enforcement may lie, not with one of the parties to the arbitration, but with an impartial and authoritative tribunal."

It seems to me that the recommendations of the President as a whole, if put upon our statute books, would destroy absolutely the activities of the workers of the country through their organizations and make them industrial slaves by law. Of course, the great percentage of unorganized workers are now made industrial slaves by the power of the trusts of the country, but certainly the working people will not acquiesce in such legislation as contained in the recommendations of the President, even by their inactivity against it.

The only solution of this whole transportation question is public ownership and operation. Among the employees of the railroads of the country, there are 229,000 that are not classified, which number no doubt include the spotters lickspittle lawyers employed in the small cities to keep them from taking cases against the companies, lobbyists, and so forth, which apparently it was not the intention of the company to make public.

It is not only upon the watered stocks, which I have mentioned, that the people are forced to pay large dividends, but also the exorbitant salaries of the officers and the abnormally high prices of supplies that are paid, as the railroad officials have interests in the companies from which they purchase them, as in the case of the Steel Trust.

The Steel Trust directors owning the railroads buy rails and other supplies from the steel companies and pay double and treble the prices that they are worth. In other words, they buy from themselves these supplies at abnormally high prices and then make the public pay for them by abnormally high freight rates.

If we had public ownership and control of the operation of the railroads, the employees would be given shorter hours and better conditions, and the public would secure better service for less money. These improvements have been shown in every country where the railroads have been taken over by the State—that is, the working conditions for the employees have been improved and better service rendered to the public at a less cost, because the Government is always endeavoring to render the greatest service for the least money, while the greedy profit seekers are always endeavoring to get the most money for the least service.

---

## "Democratic Achievements."

## EXTENSION OF REMARKS

OF

## HON. JOHN M. EVANS,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. EVANS. Mr. Speaker, in the time allowed me I purpose to comment briefly upon the accomplishments of the Democratic administration.

### THE TARIFF.

The first great piece of legislation undertaken was a revision of the tariff. The motive actuating the Democratic Party in revising the tariff was that of the public good. Republican revisions, as a rule, considered the welfare of the protected interests as paramount and the interest of the people as a mere incident. The Democrats put the people above every other consideration and presented the country with a tariff for revenue. Promises were redeemed (1) by an enlarged free list, (2) by lower duties on other goods, and (3) by an income tax.

### THE FREE LIST.

All foodstuffs were made free, including wheat, corn, wheat flour, semolina, corn meal, bread, biscuit, wafers, eggs, fresh bacon, hams, potatoes, bananas, rye, rye flour, salt, and sugar.

Besides these, the free list was enlarged so as to include agricultural implements, bituminous coal, coke, bagging for cotton, cash registers, sewing machines, typesetting machines, typewriters, shoe machinery, cement, hemp, flax, hoop iron, band iron, baling wire, iron ore, sole leather, upper leather, patent leather, split leather, belting, harness and saddle leather, boots and shoes, harness, cut nails and spikes, wire nails, horseshoes and nails, needles, tacks, printing paper, logs, timber, boards, lumber, fence posts, shingle bolts, shingles, hubs, wagon blocks, car blocks, heading blocks, clapboards, laths, pickets, palings, staves, ship timber, broom handles, wood pulp, and wool.

### INCOME TAX.

In connection with the Underwood tariff act this administration passed and put into effect an income-tax law. Under the operation of this statute the wealthy and well to do pay into the Treasury every year $200,000,000 in taxes on their enormous incomes, which formerly went scot free. Under Republican rule this gigantic sum was raised by means of a tariff on food and clothing, which were largely consumed by the plain people. Under Democratic law, this burden has been shifted from the poor man's bending back to the broad shoulders of those whose net incomes are in excess of $3,000 a year. What law could be more popular than this? What measure could be more just? What statute could more effectually lighten the load of those who struggle for their daily bread? Will any Republican candidate for office advocate a repeal of this law?

### TARIFF COMMISSION.

Ever since the American people repudiated the Republican Party for foisting upon the Nation the Payne-Aldrich tariff law that party has in season and out advocated a tariff commission. Believing that the American people wanted a nonpartisan commission to do exactly what the opposition had said they wanted done, the Democrats passed just such a bill. It passed by a handsome vote; 200 Democrats voted yes, none voted no; 39 Republicans yes, and 139 voted against the establishment of just such a commission as they had told the people they wanted.

### THE CURRENCY.

The second step toward the redemption of the promises of the Democratic Party was the passage of the Federal reserve banking law, a bill for the establishment of banks and to furnish an elastic currency, to furnish a means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States.

The old currency system which the country had endured for half a century was a makeshift war-time measure. It was inadequate and had repeatedly wholly broken down. Under the old system a dozen men either owned outright or through a system of interlocking directorates controlled practically the entire money supply of the United States. The banks were largely engaged in the Government's business, while under that system the Government could only ineffectively regulate the banking business. Indeed, the Money Trust had become more powerful than the Government itself. You will recall that in 1907, a time of profound peace and prosperity, a handful of men created a business depression between the setting of one sun and the rising of another, and an artificial panic swept from Maine to California. Wall Street was the seat of the financial government, and as from a throne the money-mongers wielded their despotic power without remorse and ruled the land without mercy.

Under the present law such a panic is impossible. If any man has commercial paper he can go to his local bank for assistance. If the local bank has not the money it can take the paper and apply to the reserve bank. If the reserve bank has not the money, it in turn will take the paper to the Treasurer of the United States, and the Secretary of the Treasury will issue sufficient money to meet the demands of the business transactions of the country. This will furnish the people a large measure of local self-government in financial affairs. This annihilated the Money Trust. It will stabilize commercial conditions and encourage enterprises throughout the United States. It makes forever impossible the manipulations of the Nation's finances. It provides the issuance of an elastic currency that will be forthcoming when the needs of the country demand, and will be

taken up and canceled when the needs contract. It ushers in an era of new freedom rich in promises of prosperity in every legitimate business and every honest enterprise.

You will recall how in 1907 Mr. Roosevelt, then President of the United States, had ordered deposited in the national banks of the country for the purpose of moving the crops the sum of $50,000,000, and how it developed before the Stanley investigating committee that $47,000,000 of this money was deposited in the banks of the city of New York, and when the panic was at its height it was loaned out at the rate of 10 per cent. For this money the Treasurer of the United States received no benefits, and the whole increment from the same went into the pockets of a few bankers of the city of New York.

Yes, my friends, the day of the Money Trust is over. That establishment has closed its doors and gone out of business. The Government of the United States has gone into the banking business, and the banks of the country have gone out of the governing business.

ANTITRUST LAW.

Among the constructive legislation enacted by the present administration may be mentioned the trade-commission bill. This bill makes unlawful all and every form of unfair methods of competition, and clothes the commission with adequate powers to destroy monopolies. The Clayton antitrust bill was enacted to supplement the Sherman law. It makes unlawful interlocking directorates and holding companies. The bill fixes personal responsibility for unlawful corporate acts. Guilt is made personal, and no longer will we witness the head of one great corporation controlling scores of other corporations. You will recall that anticipating the passage of this law Mr. Morgan withdrew from control of a score of corporations. Mr. Baker did likewise. Mr. Gary, of the Steel Trust, has recently severed his connection with half a hundred great corporations and no longer will it be possible for the head of one great corporation to deal with, buy from, and sell to another corporation of which he is the director and of which he is in practical control. Private banks will not become depositors for interstate corporations; supplies and equipment will be purchased in open competitive market, and not from fake companies, so as to rob the stockholders of the railroads and other companies. As the advocate and sponsor of such laws as this President Wilson has made himself the greatest living example of developed national ethics, and in the passage of these laws the American people are assured of the existence of a new code of business ethics and the dawn of a new era of business practices.

The new freedom of the equality of opportunity for all and special privilege for none is here.

WORKMEN'S COMPENSATION.

This bill provides for compensation for every employee of the Government who is so unfortunate as to be injured while in the performance of duty, unless, of course, the injury is the result of the voluntary act of the injured party. Men may differ about the details of such a measure, but the fundamental principle that the Government should do what it compels the private employer to do can admit of no dispute.

Our civilization is so complex and life is so constituted that in the everyday routine of our affairs accidents will happen that place upon the individual a burden that is impossible for him to bear, and in such cases this burden should be borne by society at large, and it is now being recognized that this is one of the burdens that society at large should bear. It is for this reason that everybody has come to recognize the wisdom of compensation laws.

GOOD ROADS.

For the last 50 years there have been intermittent efforts upon the part of the people to interest Congress in the question of Federal aid for wagon roads, but not since the days of Thomas Jefferson has the Congress appropriated a dollar for this purpose until a Democratic administration, after nearly 50 years of Republican control, heeded the wishes of the great rural population and appropriated eighty millions for building roads.

SHIPPING BILL.

At the close of the Civil War we had a merchant marine second to but one in the world; to-day the American flag is scarcely found upon the high seas. There are possibly three ways in which to get a merchant marine. The first is for private capital to build and operate the ships. The second is for the Government to furnish a subsidy to private concerns, and the third is for the Government to build and operate its own ships.

Every possible obstacle was thrown in the way of this legislation by the Shipping Trust of the country. They characterized it as "socialism gone to seed." They feared for the stability of the Government if it went into such a venture. Their desire was that the Government furnish the money and let them operate the ships. That is largely the view of the Republican Party, but the Democrats believe that if the Government must furnish the money it shall at least control the operation of the vessels. Nobody doubts that the result will break down the outrageous rates now charged for the transportation of the fruits of our farms and factories and that the man with goods to ship to a foreign market will no longer be at the mercy of the Shipping Trust.

CHILD-LABOR LAW.

All forward-looking people and men and women with red blood in their veins and love of humanity in their hearts have deplored the system that had grown up in this country of crushing out the life or stunting the body and souls of the boys and girls of tender age by work in mines and factories when they should be in school or at play, and it remained for a Democratic administration to place this wholesome law on the statutes.

FARM-LOAN BILL.

Having by the Federal reserve act curbed the power of the Money Trust and released the commercial interest from its thraldom, this Congress has enacted the first farm-loan bill in the history of this country. Every first-class European nation has such a law, and it is wholly inexcusable that those in control of the Government should so long have neglected the farmers. This bill makes it possible for the most numerous class of our population to borrow money at not to exceed 6 per cent, and it will probably not cost them to exceed 5 to 5½ per cent. A meeting of the Farm Loan Board in the city of Helena, Mont., recently developed the fact that the farmers of my State were paying in interest, commission, and other charges an average of twice what it will cost them under this bill. Experts have made estimates that this bill will save the farmers $2,000,000 a year. And still our opponents charge that we are a party only of negation.

ARMOR AND NITRATE FACTORIES.

For years this country has been wholly at the mercy of a few steel corporations, who made a common bid for armor whenever the Government called for a supply of that commodity. Everyone conversant with the current topics of the day will recall how, when this bill was first introduced, the Armor Trust attempted to threaten and bludgeon Congress by raising the price of armor plate immediately required by the Government $100 a ton, and how, when their bluff was called, begged and cajoled Congress and offered to furnish them this material for practically $100 a ton less than their first bid if the Congress would agree not to establish a factory. Believing that so far as possible the profits should be taken out of war, the Democratic Congress placed this law upon the statutes. The result will, I confidently predict, duplicate the result of the establishment of a Government powder factory a few years ago, which reduced the cost of powder to the Government about 50 per cent.

EIGHT-HOUR LAW.

In the closing hours of this session Congress was confronted with a most remarkable situation. The country was on the verge of a Nation-wide railroad strike. One of the questions involved in this matter was the eight-hour day, but the real question involved in that trying situation was how to prevent a strike with all its attendant horrors.

The question of an eight-hour day is no longer a debatable question. Society everywhere recognizes and approves the justice of it. It was not the real question at issue in the legislation passed. The real overshadowing question was, Should steps be taken to prevent a strike and avert a great calamity? The Democratic Party took the position that the strike should be averted. The Republican Party, in the language of some of its eminent leaders, wanted action. "Action" meant loss, suffering, bloodshed, if not civil war. The Democratic administration believed that an ounce of prevention was worth a pound of cure, and undertook to prevent rather than cure. I regret, Mr. Speaker, to find a number of men in this House, taking their cue from the candidate of the Republican Party, now criticizing the measure. Yet the record shows a number of the gentlemen voted for the bill. I am not ashamed of my vote; I am proud of it; and my vote aided in averting a great national disaster.

We are advised, Mr. Speaker, that this legislation is to be made the principal issue in the coming campaign. If so, the Democratic Party welcomes the issue. The whole spirit of the times recognizes the justice of shorter hours for labor. Half of the Republican membership of the House voted for it. Every man on the other side of the House with Progressive tendencies voted for it; only the standpatters and leaders and bosses voted against it. It is true, I am sorry to say, that when the measure was voted on in the Senate every Republican, with one notable

exception, aligned himself with the bosses of the House and voted against the measure. The one exception was the Senator from Wisconsin [Mr. LA FOLLETTE], and he voted for practically every Democratic measure that has passed that body during the present administration, and the people of his State have just shown their approval of his course by overwhelmingly renominating him in his State.

The President and Congress saved the country from a civil war and gave it time for calm, dispassionate action to prevent a similar crisis in the future. What would be the state of affairs in the United States to-day if less prompt and effective measures had been adopted by the Government? That is the complete reply to all this irresponsible criticism.

APPROPRIATIONS.

A great hue and cry is being raised about expenditures and the amount of money appropriated. This Congress did make large appropriations. It appropriated five hundred millions more for Army and Navy than any predecessor, and upon every item our critics wanted to increase the appropriations. We authorized the expenditure of eleven millions for an armor-plate factory and twenty millions for a nitrate plant, both of which will take the profits out of war. We are spending eighty millions for good roads. Would they repeal that law? Nine millions go to establish the Farm Loan System. Is anyone so bold as to say he will repeal that law? We are devoting fifty millions to build up a Government controlled merchant marine, and when you have deducted the amounts I have mentioned you will find that the appropriations do not exceed those of preceding years. We have provided the revenue to meet these extraordinary expenditures not by a tax upon the backs and stomachs of the poor, but by an income and inheritance tax have laid it where is belongs—on the well to do and the rich. That, Mr. Speaker, marks the difference between the Republican and Democratic Parties.

MEXICO.

When Mr. Wilson assumed control of affairs in Washington he inherited from his Republican predecessor the duty and responsibility of terminating a reign of terror and bringing order out of chaos in the distracted country of Mexico. That unfortunate country was a veritable inferno of insurrection. Barbarism was rampant and warfare was raging in every section, the half-civilized, illiterate people, with no knowledge or regard for the rights of citizens of other countries, insolent in their conduct toward us, doing many things that would tend to compel this country to declare war or otherwise discipline that unfortunate nation. The President, realizing the unfortunate conditions of those people, overlooked many affronts offered to this country, and with a patience unknown and unequaled in governmental affairs undertook to aid them by a show of friendship rather than a show of force. It was then that the opposition to that great man in the White House became most uncharitable. The press and the politicians, seeking to gain the temporary advantage, taunted and criticized what they called the watchful-waiting policy of the administration. But the American people are to-day proud of the manner in which the President sustained the dignity and prestige of the United States.

A more impulsive man, a man more ambitious for military glory, would have thrown an army onto the Mexican soil and with the battleships of this country bombarded every port of Mexico, and the result would have been that thousands of our brave young men would have been sleeping in unmarked graves. Thousands of others would have been languishing in hospitals with their bodies mangled and bleeding, their legs torn away by merciless shot and shell. Thousands of homes would be desolate and thousands of others would have their vacant chair. At the end of such a war—and it could only end one way—the national debt would have been multiplied and the land would have been filled with widows and orphans. Cripples hobbling on crutches in every community. But, thank God, we had a Woodrow Wilson in the White House; a friend of the right, a foe of the wrong; a lover of peace, who could not be driven, who could not be cajoled, but calmly, confidently, courageously held his head above the waves until at last, by patience and persistence, and through watchful waiting, if you please, a new day has broken; the sun of promise is once more rising on that stricken land.

In every home where hymns are sung, in every home where knees are bent, a thousand prayers have gone up to the Giver of every good and perfect gift that a man with the supreme patience of Woodrow Wilson occupied the White House during those tumultuous days. If there is anybody here, anybody who wants war, he has only to go across the Canadian line and he will find a country that is now asking the enlistment of men. But before he goes let him stop and look and listen. Let him see all Europe torn and bleeding. Look at the country of Belgium which for years has been the home of millions of prosperous people, laid waste and prostrate. Let him hear the cries of the wounded; let him see the tears of the mother and the sisters and the daughters and all those stricken people. Let him hear the prayers that go up to the great white throne that those near and dear to the millions that offer those prayers may return home to their loved ones. In my judgment, when he has painted for himself that picture he, too, will go home at night and offer up a prayer to his guardian angel that Woodrow Wilson is in the White House.

---

**What Wilson Has Done.**

"I am willing, no matter what my personal fortunes may be, to play for the verdict of mankind. Personally it will be a matter of indifference to me what the verdict on the 7th of November is, provided I feel any degree of confidence that when a later jury sits I shall get their judgment in my favor. Not in my favor personally—what difference does that make?—but in my favor as an honest and conscientious spokesman of a great Nation."—WOODROW WILSON.

---

## EXTENSION OF REMARKS

OF

## HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. KEATING. Mr. Speaker, on March 4, 1913, the people of the United States placed the Democratic Party in control of our National Government. Woodrow Wilson became President, and strong Democratic majorities took the reins of power in the House and Senate.

For three years and six months the Democratic Party has been directly responsible for every act of the legislative and executive branches of the Government.

How has the Democratic Party used this extraordinary power? The people are entitled to an answer.

Mr. Speaker, I am not a very strong partisan. In fact, I have not much respect for the man who wears a party collar. I am not one of those who contend that all the angels belong to the Democratic Party and all the devils to the Republican Party. There are a lot of fellows in our party I should like to swap for some men I know in the Republican Party. I am tempted to particularize, but that might prove embarrassing. And, anyhow, that is not what I started out to say.

The point I wished to make was this: The Democratic Party, under the leadership of Woodrow Wilson, has made good!

The record proves it. You can not get away from that. Facts are stubborn things, and here are the plain, unvarnished facts concerning what has been accomplished, not what has been promised, during Woodrow Wilson's administration:

RECORD OF ACHIEVEMENT.

Peace: Maintaining national honor and dignity throughout, President Wilson has kept America at peace, safe in the midst of a "world on fire," and free to serve both the welfare of her own people and the broad cause of all humanity.

Prosperity: Free of the horrors of war, enjoying the blessings of peace, aided by the constructive legislative enterprise of the Wilson administration, the country has entered upon an era of prosperity hitherto unequaled in this or any other land.

Monroe doctrine and Pan American affairs: Firm maintenance of the Monroe doctrine and a new policy of absolute fair dealing with the Republics of all the Western Hemisphere has substituted a feeling of trust and confidence among the Pan American countries for the feeling of distrust and doubt that formerly prevailed. This has resulted in agreements assuring lasting friendship and already has led to large expansion of American trade in South and Central America.

Mexico: The administration has dealt with Mexico in the kindly spirit of tolerance and forbearance, engendered by the possession of superior power and a devotion to ideals of free government. Intent upon encouraging the development of constitutional government in Mexico and fostering the feeling of kinship which his entire Latin-American policy was building up among the republics of this hemisphere, the President has maintained the attitude of an indulgent friend toward the war-wracked southern republic, holding in reserve at all times the policy of physical force as an effective and decisive last resort.

Dollar diplomacy: By placing the rights of nations above the dollar in determining foreign policy—by substituting for "dollar diplomacy" "decent diplomacy"—the divorcement of the Government from affiliations with special financial interests has been accomplished and the exploitation of the smaller Latin-American countries by private financial interests has ceased.

SAVING $150,000,000 FOR THE FARMERS.

Rural credits: Last July we passed the Federal farm-loan act. So far as the farmers of this country are concerned this is probably the most important piece of constructive legislation ever placed on the statute books of this Nation. It will enable farmers to borrow money at 5 and 6 per cent, and it is estimated will save the men who cultivate the soil of this country from one hundred and fifty to two hundred million dollars per year.

Currency reform: For 25 years the Republican Party talked about banking and currency reform, but panics continued to devastate the country. Under the guidance of Woodrow Wilson we passed the Federal reserve act, which makes it absolutely impossible for this country to experience another "money panic." From the point of view of the business man this legislation is as important as is the Federal farm-loan act from the point of view of the farmer.

Good roads: This Congress has passed and President Wilson has approved a good-roads law which makes available $75,000,000 for the development of highway systems throughout the United States under safeguards which prevent wasteful use of the money.

In addition to that ten millions more are made available for use in the forest reserves of the West. Other parties have talked about good-roads legislation, but the Democratic Party is the first party to write a good-roads law on the statute books.

Army and Navy: This administration has done more for our Army and Navy than any other administration in our history. The Members of this House know I am not a militarist, but I want the people of this country to be in a position to safeguard their liberties against foreign invasion or domestic aggression. The Democratic Party has given the Nation a Navy capable of overwhelming the Navy of any nation on earth with the exception of Great Britain. This Congress has appropriated $635,844,095 for the Army, Navy, and coast fortifications. This is a larger sum than was ever appropriated by any Nation for national defense in time of peace. Under the circumstances it is small wonder that even the opponents of the Democratic Party have dropped the preparedness issue.

Tariff revision downward: In keeping with the platform pledge of 1912, the Democratic Party revised the tariff downward, thus unfettering industry and commerce, depriving monopoly of its former control over production, distribution, and prices, and providing adequate customs revenue for the maintenance of the Government, but we went further, because we have just passed the tariff-commission bill, which we all hope will take the tariff out of politics.

TAXING WEALTH INSTEAD OF INDUSTRY.

Income and inheritance taxes: When the Democratic Party came into power it found that all the money needed to support the Government was being raised by a tax on the things men eat and wear and use. Therefore the workingman contributed practically as much to the support of Uncle Sam as did the multimillionaire. We have changed this manifestly unjust system, and during the coming year will raise about $250,000,000 through income and inheritance taxes. Thus we have placed the burden of government on the back of wealth and removed it to a certain extent from the back of industry.

Ship-purchase act: We have put "Old Glory" back on the seas. For 50 years the American merchant marine has been undergoing slow but certain dissolution. When the European war broke out we found we were without vessels to carry our products to foreign lands. In the face of very bitter and persistent opposition we have passed a bill providing $50,000,000 for the purchase of merchant ships to be operated under the American flag.

Direct election of United States Senators: The Democratic Party has abolished the "American House of Lords," or as some call it, the "Millionaires' Club," and has made the Senate of the United States truly representative of the people of the United States.

Federal Trade Commission: This new commission in the year and one-half of its operation with signal success has supplied the demand for a tribunal to arbitrate commercial disputes, to prevent "unfair competition," and to do justice between the public and the great industrial corporations.

Child-labor law: I introduced this bill and succeeded in getting it through the House, but it was pigeon-holed in the Senate until President Wilson came to the Capitol and by the exercise of his personal influence succeeded in forcing its enactment. It bars the channels of interstate commerce to the products of those mines, quarries, factories, canneries, and so forth, which employ children of a tender age. It is an emancipation proclamation for the children in industry.

LEGISLATION FOR THE TOILERS.

Labor's Magna Charta: We have enacted laws preventing the abuse of the injunction in labor disputes and legally declaring the labor of a human being not a commodity open to barter and sale like inanimate things. We passed a law applying the eight-hour day to all work done by the Government, whether directly or by contract. We passed the seamen's act, which vastly improves the working conditions of sailors who enter American ports, and in addition contributes to the safety of passengers at sea. We have enacted a model workmen's compensation law for Government employees, and when a great railroad strike threatened we brought industrial peace to the country by giving 400,000 railroad workers an eight-hour day. To insure industrial peace in the future we passed the law establishing the United States Board of Mediation and Conciliation, and during the few years it has been in existence it has averted scores of serious conflicts.

Agricultural extension: Under the Smith-Lever Agricultural Extension Act elaborate machinery has been put into operation by Woodrow Wilson that involved the expenditure of nearly $5,000,000 during the last fiscal year, a sum which will increase automatically year by year until 1922, for the dissemination of scientific knowledge concerning farm operation and management. This law is expected to double the productiveness of American farms.

DEVELOPING THE WEST.

Helping the homesteader: When Woodrow Wilson came into office the man who attempted to make his home on the public domain was regarded as little short of a criminal. Under the administration of Secretary of the Interior Lane all that has been changed. More homestead entries have been made in my congressional district during the last two years than ever before in the history of my State. The Interior Department is encouraging settlement and has made it clear that the homesteader who acts in good faith will receive his patent.

Improved marketing system: The organization by the Department of Agriculture of an Office of Markets and Rural Organization applies scientific and modern business methods toward the elimination of waste in transporting and distributing farm products. It is estimated that of the billions of dollars annually paid by the consumers of this country for farm products only about 30 cents on the dollar goes to the pockets of the farmers. The rest goes to the middleman. In Denmark 90 cents out of every dollar goes to the farmer. It is hoped that through the Office of Markets and Rural Organization we will bring American agriculture a little nearer to the Danish standard.

Crop moving: By placing the surplus funds of the United States Treasury directly in the banks of the South and West at crop-moving periods the Wilson administration has greatly aided the movement of crops to market and has put an end to the practice of previous administrations of concentrating these much-needed funds in the New York banks.

DESTROYING THE EXPRESS LOBBY.

Parcel post: The Democratic Party enacted the parcel post law, and this administration has developed the system to the point where we have succeeded in breaking up the extortionate monopoly of the private express companies. These companies have been compelled to reduce their rates and improve their service, and every man and woman in the Nation who has occasion to use the express service has benefited thereby.

The lobby: When Wilson was sworn in as President in March of 1913 the city of Washington was filled with lobbyists, who were sent here for the purpose of influencing Congress in the matter of tariff and currency legislation. The President turned the searchlight of publicity on this "invisible government" and he drove the disreputable crowd from the Nation's capital.

Philippine independence: By the Philippine bill recently enacted, a greater measure of freedom was allowed the Filipinos, and their ultimate independence was assured. Senator SHAFROTH, of Colorado, was more responsible than almost any other man in Congress for the passage of this bill.

The end of Cannonism: Keeping its pledge in the campaign of 1910, the Democratic House of the Sixty-second Congress abolished the system of czarism which had become so offensive to the country under the name of "Cannonism." For years the House had been controlled by a small group of men representing special interests. The people demanded a change, and the Democratic party effected it.

"He has kept us out of war": That is the slogan that strikes terror to the hearts of our opponents, because they know that it brings an answering cheer from the lips of every true American. The issue was presented in masterly fashion by former Gov. Martin H. Glynn in his keynote speech before the Democratic national convention in St. Louis, when he said:

GOV. GLYNN ON WILSON.

"To maintain our national honor by peace if we can, by war if we must," is the motto of the President of the United States.

This policy may not satisfy those who revel in destruction and find pleasure in despair. It may not satisfy the fire eater or the swashbuckler.

But it does satisfy those who worship at the altar of the God of Peace.

It does satisfy the mothers of the land at whose heart and fireside no jingoistic war has placed an empty chair.

It does satisfy the daughters of this land from whom bluster and brag has sent no loving brother to the dissolution of the grave.

It does satisfy the fathers of this land and the sons of this land who will fight for our flag and die for our flag when reason primes the rifle, when honor draws the sword, when justice breathes a blessing on the standard they uphold.

Mr. Speaker, I have been a Member of this House for four years.

I am a candidate for reelection on the Democratic ticket in the third congressional district of Colorado.

In an humble way I have had a part in the great work of the Wilson administration.

I stand on that record.

---

**The Democratic Administration and the Consular Service.**

---

## EXTENSION OF REMARKS

OF

# HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. FLOOD. Mr. Speaker, whatever partisan critics may say about the Democratic Party, they can find little just fault with its attitude toward the Consular Service. It is well known that for many years our Consular Service was far from satisfactory. There was no thorough or systematic method of determining the fitness of the men to be sent abroad as consuls, and there was no law or effective regulation which insured retention in the service of men who were especially efficient. Upon each change of administration a majority of the members of the Consular Service were recalled regardless of their usefulness or experience and were usually replaced by the new administration with inexperienced and untried men. It was a distinguished member of the Democratic Party who set about to remedy this condition. During the Fifty-fifth Congress, in 1895, Senator Morgan, of Alabama, who was chairman of the Committee on Foreign Relations of the Senate, introduced one of the most complete measures ever drafted for the reorganization of the Diplomatic and Consular Service under civil-service rules that has ever been submitted to Congress. He succeeded in having the bill reported favorably to the Senate on February 6, 1895, and the report of the Foreign Relations Committee upon that bill may well be regarded as a classic on the subject of the improvement in the foreign service. This occurred during President Cleveland's second administration. Although Senator Morgan's bill was not enacted into law, it gave great impetus to the movement for the reform of the Consular Service and contained the essential principles of all the bills that have since been introduced or enacted by Congress.

President Cleveland, another eminent Democrat, foreseeing the failure of Congress to enact Senator Morgan's bill into law, and concluding that it was time to make some effort to improve the condition of the Consular Service, issued an Executive order on September 20, 1895, applying in a limited way the merit principles to the selection of men for appointment to the Consular Service. In his third annual message, dated December 2, 1895, after setting forth the provisions of the order, President Cleveland said:

> It is not assumed that this system will prove a full measure of consular reform. It is quite probable that actual experience will show particulars in which the order already issued may be amended and demonstrate that for the best results appropriate legislation by Congress is imperatively required.

In the consideration of the various bills for the improvement of the service which were introduced in Congress during the 10 years following the Democratic Members of the House and Senate contributed their full share.

It is well known that when Mr. McKinley became President there was the usual pressure brought to bear for foreign-service appointments, with the result that from March 4, 1897, to November, 1898, 238 out of a total of 272 members of the Consular Service had been recalled and their places filled by new men, and this notwithstanding President Cleveland's earnest attempt to apply to candidates for appointment as consuls some adequate test of their efficiency and their fitness. Indeed, President Cleveland's Executive order of December 2, 1895, became under the McKinley administration almost a dead letter and that the examination required was little more than a form.

When in 1906 Congress took up in earnest the improvement of the Consular Service the Democratic Members of the House and Senate gave to the law which was then enacted their hearty support. That law, the act of April 5, 1906, did not, however, contain any provision applying civil-service principles to the selection of men for appointment to the Consular Service as was contemplated by the bill prepared 10 years before by Senator Morgan. It was necessary, therefore, for President Roosevelt, by Executive order, to supplement the law passed by the Republican Congress and establish rules and regulations for the examination of candidates for appointment in the Consular Service and to lay down principles which should govern promotions of men in that service.

An attempt has been made in some quarters, and even, I regret to say, upon the floor of the House, to show that the present Democratic President, Mr. Wilson, has modified or evaded the rules governing appointments in the Consular Service established by President Roosevelt in 1907. Let us examine the facts. At the beginning of the present administration there was apprehension in many quarters that the President would refuse to be bound by the rules promulgated by President Roosevelt under a Republican administration and retain in the service the men appointed during the Republican administration, the great majorty of whom were Republicans, and deny himself the right to appoint consuls of his own selection. But that prediction proved groundless, for on June 16, 1913, the President announced that he had had under consideration the matter of appointments to the Consular Service and had authorized the Secretary of State to make the following public statement:

> The civil service was, by an Executive order issued June 27, 1906, extended to the Consular Service, and the President is entirely in sympathy with the purpose which the order was intended to subserve. He believes that consular appointments should be made upon examination and that promotions should be made upon merit. If vacancies occur, they will be filled from within the service, where this can be done without injury to the service. If a vacancy occurs in one of the higher positions, and he does not at the time find within the service a person entirely qualified to fill such position, he will feel at liberty to exercise the right vested in him to suspend the Executive order in respect to that particular appointment, but such an appointment will be an exception to the rule and will be made only when he is convinced that the good of the service clearly requires such an exception.

Since the beginning of President Wilson's administration 61 appointments have been made by him to the position of consul general or consul, exclusive of those men already in the service who have been merely transferred or promoted. All of those 61 men appointed were either transferred from the Department of State, in accordance with the rules, or promoted from the grade of consular assistant or student interpreter, also in accordance with the rules, or appointed from the eligible list in the usual manner required by the rules, with the exception of 6. The latter were appointed under a suspension of the rules by Executive orders, which were issued by the President and made public at the time they were issued. In order to correct any misapprehension of the facts in regard to these men there is submitted the following biographical sketch of each man so appointed:

> Otis A. Glazebrook, of Elizabeth, N. J., was appointed consul at Jerusalem February 18, 1914, on the authority of an Executive order dated February 10, 1914. At the time of his appointment Mr. Glazebrook was 69 years of age. He was a clergyman of the Episcopal Church, having served 7 years in Virginia, 4 years in Baltimore, 3 years in Macon, and was for 17 years rector of St. John's Church in Elizabeth, N. J., retiring from the active ministry in 1912. He was chaplain of the University of Virginia, also of the National Guard of several States, and of other organizations.
>
> Wilbur Keblinger, of Staunton, Va., was appointed consul at Malta May 15, 1914, under the authority of an Executive order dated March 28, 1914. Mr. Keblinger was born in November, 1875, graduated with a degree of LL. B. from George Washington University. He was employed in the Southern Railway and American Ordnance Co. for two years and for the same length of time was a clerk in the War Department. From 1899 to 1914 he was secretary of International Boundary Commission, United States and Mexico, and was commissioner for the United States on the Rio Grande Commission from 1910 to 1914.
>
> John M. Savage, of Newark, N. J., was appointed consul at Sheffield July 27, 1914, under the authority of an Executive order dated April 21, 1914. Mr. Savage was born on December 10, 1864, and studied law for two years and had been engaged in various capacities in linen and knitting mills for a number of years and was also in 1912 and 1913 in banking and brokerage business in New York. He was American vice consul at Belfast in 1885 to 1889, vice consul at Dundee from 1893 to 1894, and consul at Dundee from 1894 to 1897, retiring from the service upon a change of administration.
>
> Wallace J. Young, of Illinois, was appointed consul at Carlsbad July 24, 1914, under he authority of an Executive order dated May 26, 1914. Mr. Young was born August 21, 1880, and is a graduate of Central High School of Washington, D. C. He was private secretary to several Members of Congress; was a clerk in the Census Bureau and in the Civil Service Commission from 1900 to 1907, when he was transferred to the State Department as a clerk of class 1. He served in the State Department for over seven years, being promoted through the various grades from class 4 to class 1. He served as clerk to the Third Assistant Secretary; was secretary for several years to the Board of Examiners for the Foreign Service; was with the Agency of the United States in the Fisheries Arbitration at The Hague in 1910; was assistant secretary of the American Delegation to the Opium Conference and special disbursing officer to the same delegation in 1911.

James C. Monaghan, of New Jersey, was appointed consul at Kingston, Jamaica, October 16, 1914, under the authority of an Executive order dated October 10, 1914. Mr. Monaghan was born October 11, 1867; is a graduate with a degree of A. B. and A. M., of Brown University, and LL. D., of St. Mary's College. He was editor of a newspaper in Providence and Philadelphia, professor in the University of Wisconsin, St. John's College, and the University of Notre Dame. He was American consul at Mannheim from 1885 to 1890 and consul at Chemnitz from 1893 to 1900. Mr. Monaghan was one of the most efficient members of the Consular Service at the time of his retirement.

John R. Silliman, of Texas, was appointed consul at Saltillo, Mexico, on February 22, 1915, under the authority of an Executive order dated July 3, 1914. Mr. Silliman was born December 7, 1865, and is a graduate of Princeton with the degree of A. B. Until 1897 he was engaged in railway and insurance work in Texas and was appointed vice and deputy consul at Saltillo in 1907 and served in that capacity until 1915.

Thus it will be seen that only one of the six men appointed by the President under suspension of the rules had never had experience in the Consular Service or in the Government service under the Department of State, and that officer is Mr. Glazebrook, and in regard to him it may be said that it is a matter of general information that since the beginning of the European war and the entrance of Turkey into that conflict Mr. Glazebrook has had one of the most trying posts in the Consular Service. He has been responsible for the protection of the lives and property not only of American citizens but of the subjects of Great Britain, France, Italy, and other nations who have intrusted the care of their interests in enemy countries to the United States during the present war. No one acquainted with the facts will deny that Mr. Glazebrook has acquitted himself of a very difficult task in an unusually creditable manner.

Some unfounded criticism has also been made of the appointment as consul or consul general of men holding positions in the Department of State, but the facts show that with the exception of two all of the men so appointed were consular officers who had been brought into the department for special duty and that their appointment as consul or consul general by President Wilson meant merely their transfer from the department back to the service to which they belonged. The two exceptions mentioned were men who had served in the Department of State from one to two years before their appointment as consul, which appointment was made in pursuance of the following paragraph of the rules prescribed by President Roosevelt:

3. Persons in the service of the Department of State with salaries of $2,000 or upward shall be eligible for promotion on the basis of ability and efficiency as shown in the service to any grade of the Consular Service above Class VIII of consuls.

In order that some idea of the qualifications of these men may be gained, a biographical sketch of each is submitted as follows:

Calvin M. Hitch, of Georgia, is 47 years of age, a graduate of Emory College with the degree of A. B.; practiced law in Georgia for six years; was a member of the Georgia Legislature in 1896 and 1897; was executive secretary to three governors of Georgia from 1898 to 1907; was private secretary to Senator Bacon, of Georgia, from 1907 to 1910; was general agent of an insurance company in Georgia from 1910 to 1913; was assistant chief of the Latin American Division of the Department of State from 1913 to 1915; and was appointed consul at Nottingham, England, February 2, 1915, under Paragraph III of the Executive order of June 27, 1907.

William F. Kelley, of Nebraska, was, when appointed, nearly 41 years of age; was a graduate, with a degree of Ph. D., of Hillsdale College; practiced law in Lincoln, Nebr., for 22 years, and was appointed clerk to the Secretary of State October 1, 1913; assistant solicitor in the Department of State August 27, 1914, and consul at Rome June 8, 1915, under paragraph 3 of the Executive order of June 27, 1907. Mr. Kelley recently died at his post of duty in Rome.

But this administration has not only retained unmodified and enforced the regulations for the appointment and promotion of men in the Consular Service which were promulgated by a former administration, but it has made many efforts to still further improve the service through constructive legislation and adequate appropriation, and has, moreover, placed among the statutes the only existing legislative recognition of the application of civil-service principles to appointments and promotions in not only the Consular Service but the Diplomatic Service as well. The act of February 5, 1915, passed by a Democratic Congress and approved by President Wilson, contains the following section:

SEC. 5. That the Secretary of State is directed to report, from time to time, to the President, along with his recommendations for promotion or for transfer between the department and the foreign service, the names of those secretaries in the Diplomatic Service and the names of those consular officers or departmental officers or employees who, by reason of efficient service, an accurate record of which shall be kept in the Department of State, have demonstrated special efficiency, and also the names of persons found upon examination to have fitness for appointment to the lower grades of the service.

All efforts for a period of 20 years to secure the enactment of a law applying civil-service principles to the appointment of men to the Diplomatic and Consular Service having failed, it remained for a Democratic Congress and a Democratic President to enact the only existing law giving legislative approval to the application of civil-service principles to the appointment and promoton of officers in the Diplomatic and Consular Service.

But this is not all. The administration of the consular organization under the law of 1907 and previous statutes was difficult and unsatisfactory. The President was given no latitude or freedom of action in the transfer or reassignment of officers to meet the exigencies of our commerce or the adequate protection of American citizens and their property. Moreover, the greatest war in all history, involving the principal nations of the world, caused most of those nations to place their interests in enemy countries under the care of the United States. The difficulties arising in the proper discharge of this trust, unprecedented in its magnitude, showed more clearly than anything else had done the weakness and inelasticity of the then existing laws governing the administration of the Diplomatic and Consular Service and the impracticability of utilizing diplomatic and consular officers to the best advantage without broader and more practical laws. The present Democratic majority in Congress, after considering the subject, enacted the law of February 5, 1915, a measure of great value to the future international relations of this country, which at once made it possible to administer the foreign service in much the same manner as the Army and Navy are administered. The result has been more efficient administration, more satisfactory service, and greater benefits to the country, and the protection of American citizens and their property abroad.

In an earnest effort to still further improve the Consular Service, the present Congress has enacted into law the principle that all consuls general and consuls must be American citizens and that wherever possible all vice consuls must be American citizens; it has authorized the acquisition of suitable premises for the consulate general, United States court, post office, and other Government offices at the great port of Shanghai, China, one of the most important steps yet taken toward the upbuilding of the Consular Service and the extension of American trade in the Far East; it has provided for the detail of consular officers to visit manufacturing and exporting districts in the United States for the purpose of conferring with business men and informing them of the possibility of selling their products in foreign markets, and in many other ways has Congress and the present administration succeeded in improving and strengthening the Consular Service and increasing its usefulness.

---

## Admiral Dewey's Interview and Congressman Gardner's Answer.

### EXTENSION OF REMARKS

OF

### HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. GARDNER. Mr. Speaker, on August 20, 1916, the New York World published an interview in which Admiral Dewey was emphatic in his praise of Secretary Daniels's work for the Navy. Most people have forgotten that Admiral Dewey in a public letter expressed the very same laudatory views about the condition of the Navy at the time of the naval parade in New York a year ago last May. Yet, in the maneuvers which followed that parade, no less than 7 out of the 12 submarines proved unfit for duty, according to the commander in chief's report. That is the report, by the way, in which Admiral Fletcher specified 15 fundamental weaknesses in the fleet under his command.

Perhaps the best way to answer Admiral Dewey's eulogy of the Navy under Secretary Daniels is to quote from the report which Admiral Dewey himself signed as president of the General Board of the Navy in November, 1913, as follows:

The absence of any definite naval policy on our part, except in the General Board, and the failure of the people, the Congress, and the executive government to recognize the necessity for such a policy has already placed us in a position of inferiority which may lead to war; and this inferiority is progressive and will continue to increase until the necessity for a definite policy is recognized and that policy put into operation.

Then it might not be a bad idea to recall the evidence of Admiral Fisk, senior naval adviser to Secretary Daniels, on December 17, 1914, before the House of Representatives Committee on Naval Affairs. Here is what Admiral Fiske said:

I would say it would take about five years to get ready with our Navy to fight successfully and effectively against an effective navy.

By the way, Admiral Fiske reiterated that statement again last winter on March 24, 1916, saying:

I think it would still take us more than five years. We are not pointed that way.

Admiral Winslow, commander in chief of the Pacific Fleet, agreed with Admiral Fiske in his testimony on February 24, 1916. Speaking of Admiral Winslow, reminds me that on that same day when he was asked by Congressman STEPHENS as to the condition of our Pacific Fleet, he replied:

Bar luck, one good battleship ought to be stronger than all we have got.

On February 23, 1916, Admiral Badger punctured Secretary Daniels's claims when he was interrogated by the House Committee on Naval Affairs. Congressman ROBERTS said to him:

Has the increased efficiency of our Navy from year to year kept pace with the increased efficiency of other navies?

Admiral Badger replied:

I think not.

Of course, even before it collected an interview with dear old Admiral Dewey, the New York World knew perfectly well the true condition of the Navy; that is, the World knew all about the Navy until election time drew near and it became the Democratic Party organ. On February 27, 1916, the World published its own analysis of the United States Navy. Here is an extract from the headlines with which the World prefaced its analysis:

Analysis of Navy by World shows 40 per cent of ships in Atlantic not fit for war.
Greatest weakness is shortage of men and officers.
Half of the destroyers are not manned and the entire submarine flotilla is in imperfect condition.
Our fleet is blind, having neither air scouts nor swift battle cruisers.

Those headlines do not seem to indicate that the World's analysis and Secretary Daniels's claims have many points in common. But the most damning evidence against Secretary Daniels is contained in the report on the Atlantic Fleet in 1915 made by Admiral Fletcher, its commander in chief. This report was for a long time suppressed, but was forced out last January when the United States Senate adopted Senator LODGE'S peremptory resolution of January 8, 1916. The closing words of Admiral Fletcher's report should of themselves be sufficient to put the public on its guard against a Secretary of the Navy who continually pretends that the Navy is in a high state of efficiency when the Navy is not in a high state of efficiency at all. Here is the last paragraph of Admiral Fletcher's report on the Atlantic Fleet for the season of 1915:

In brief the principal weaknesses and requirements of the fleet are as follows:
(a) Shortage of officers.
(b) Shortage of men.
(c) Lack of fast armored ships and fast light cruisers.
(d) Limitations of mobility and seagoing qualities of submarines.
(e) Lack of aircraft.
(f) Lack of radio direction finder.
(g) Too frequent overhaul of battleships.
(h) Necessity of maintaining full complements in active ships of the fleet.
(i) Need of additional mining and sweeping vessels.
(j) Desirability of mobilizing ships in reserve annually with the active fleet.
(k) Need of battle target practice at long ranges.
(l) Necessity for increased facilities at fleet rendezvous.
(m) Provision for division commanders for mining division and auxiliary division.
(n) Provision for more speed in design of fighting craft intended to operate with the fleet.
(o) Need of antiaircraft guns.

Pretty much every one of these weaknesses is directly the result of Secretary Daniels's policy. He refused to recommend any more officers. He refused to recommend any more men. The General Board of the Navy in the fall of 1914 recommended 19,600 additional men. Secretary Daniels demanded the instant suppression of that recommendation on penalty of smothering the General Board's report altogether. (See evidence of Admiral Fiske before the Committee on Naval Affairs of the House of Representatives, Mar. 24, 1916.) He failed to recommend any fast battle cruisers whatever. When the General Board of the Navy in the fall of 1914 recommended $5,000,000 for aircraft Secretary Daniels cut out the recommendation entirely. Even when he was asked by the Committee on Naval Affairs whether he did not want the modest amount of $1,000,000, he declared that he did not care to ask for it. Congress gave it to him in spite of himself, and precious little use has he made of it, for in the month of August, this year, there were only seven aeroplanes in the Navy that could fly. As to the other faults which Admiral Fletcher found there is not one of them which would have been tolerated by a Secretary of the Navy who knew his job.

The whole business amounts to this: For nearly two years Secretary Daniels continued to regard the Navy as a laboratory in which to indulge his smattering taste for politico-sociological experiments. Even amid the world-wide clash of resounding arms, he continued serenely on his way and smilingly told Congress that the country's revenues could not stand the drain if we undertook to meet the views of the General Board of the Navy.

## Exports of Domestic Merchandise.

### EXTENSION OF REMARKS

OF

### HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. MEEKER. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I insert the following, which is a summary of exports of domestic merchandise, by articles and value, as published by the Department of Commerce in their monthly issue of June, 1916:

*Summary of exports of domestic merchandise, by articles and values.*

| | Twelve months ending June— | | |
|---|---|---|---|
| | 1914 | 1915 | 1916 |
| Abrasives: | | | |
| Wheels, emery and other | $655,778 | $736,879 | $1,630,26 |
| All other | 1,458,854 | 1,065,369 | 1,703,07 |
| Total | 2,114,632 | 1,802,248 | 3,333,33 |
| Agricultural implements, and parts of: | | | |
| Hay rakes and tedders | 410,121 | 181,570 | 284,20 |
| Mowers and reapers | 18,658,363 | 3,514,803 | 6,247,00 |
| Planters and seeders | 865,642 | 382,070 | 297,25 |
| Plows and cultivators | 5,265,926 | 2,528,410 | 4,456,96 |
| Thrashers | 2,519,276 | 1,029,234 | 1,520,63 |
| All other, and parts of | 4,246,461 | 2,668,891 | 4,805,22 |
| Total | 31,965,789 | 10,304,978 | 17,611,29 |
| Aluminum, and manufactures of | 1,101,920 | 3,245,799 | 5,644,34 |
| Animals: | | | |
| Cattle | 647,288 | 702,847 | 2,383,76 |
| Hogs | 133,751 | 93,067 | 238,71 |
| Horses | 3,388,819 | 64,046,534 | 73,531,14 |
| Mules | 690,974 | 12,726,143 | 22,946,31 |
| Sheep | 534,543 | 182,278 | 231,53 |
| All other (including fowls) | 408,284 | 202,817 | 331,33 |
| Total animals | 5,803,659 | 77,953,686 | 99,662,81 |
| Art works: Paintings and statuary | 1,415,302 | 298,312 | 404,52 |
| Asbestos, manufactures of | 687,073 | 535,027 | 1,019,08 |
| Asphaltum: | | | |
| Unmanufactured | 1,131,086 | 616,240 | 830,94 |
| Manufactures of | 362,347 | 400,154 | 510,29 |
| Athletic and sporting goods | 783,120 | 576,442 | 720,72 |
| Babbitt metal | | 122,597 | 419,63 |
| Bauxite concentrates | | 531,404 | 929,30 |
| Blacking (including shoe paste and polish, and other) | 649,395 | 503,629 | 784,55 |
| Brass, and manufactures of: | | | |
| Scrap and old, fit only for remanufacture | 2,714,202 | 1,576,003 | 874,62 |
| Bars, plates, sheets, etc | 791,629 | 6,149,183 | 35,669,59 |
| Articles made from | 3,966,645 | 12,819,373 | 128,331,82 |
| Total | 7,472,476 | 20,544,559 | 164,876,04 |
| Breadstuffs: | | | |
| Barley | 4,253,129 | 18,184,079 | 20,663,53 |
| Bran and middlings | 71,043 | 329,425 | 432,28 |
| Bread and biscuit | 728,447 | 702,509 | 787,56 |

## Socialism.

## EXTENSION OF REMARKS
OF
# HON. J. THOMAS HEFLIN,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. HEFLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to submit an address by Rev. Luther Roberts, of Ada, Okla., delivered on the 20th day of April, 1916, on the subject of "Socialism and religion":

A STUDY OF THE SOCIALIST PHILOSOPHY AND PROPAGANDA.

[An address by Rev. Luther Roberts, of Ada, Okla., delivered before the district conference of the Methodist Episcopal Church South in Oklahoma, Apr. 20, 1916.]

A few years ago I was placed on the program of our summer school of theology to discuss "Socialism and religion." At the time many asked, "What has the church to do with socialism?" The question was variously answered by men who had given little or no thought to the socialist movement. Some of them were sure it was a harmless political agitation, and as such would soon cease; others, that while it was only a political agitation, it was pitched upon a plane which made it injurious to the public peace and morals; still others, that beneath it lay a corrupt and pestilent philosophy, the progress of which ought to be checked. If we could so define socialism as to confine it within the limits of a purely political movement, without harmful elements, we would be relieved of the duty of taking it into the Christian pulpit; but since we can not so define it, but find, on the other hand, that it is indeed a corrupt and pestilent philosophy, we have but to consult our ordination vows to see our duty in the premises.

In seeking a definition of this great movement, I have confined myself to the recognized leaders within the movement; in no instance have I gone to those who speak from the outside. In the light of the knowledge which I have gained from a somewhat familiar acquaintance with those on the inside, I want to venture the following definition, and hazard the prophecy that you will never hear it denied by any competent authority: Socialism is, in politics, republicanism; in economics, communism; in religion, atheism. No definition of socialism is adequate which does not measure off the whole of human life. Socialism is a philosophy; it was a philosophy ages before it wrote a political platform or conceived a political program. There is a general lack of correct information with regard to the real spirit and fundamental claims of this movement, and it is due to the fact that men have looked upon it as a political movement, a recrudescence of populism.

Now, Socialists hold some things in common with the Populists, also with the Democrats and Republicans; but it is not these things with which we are here concerned. It is only when socialism invades the religious and ethical realm that we deem it advisable or proper to speak.

There is one socialism, but many organizations, as there was one Israel, with many surface divisions of tribes. What is fundamentally true of one branch of socialism is true of the whole movement. Every Socialist Party on earth is based upon the principles and committed to the program set forth in the Communist Manifesto, the birth cry of modern socialism and the recognized international platform of the movement. That this one socialism is essentially atheistic and anti-religious is a common charge, and the charge is easily supported by the utterances of the majority of Socialist leaders in every country in the world. It may be objected that such utterances are but the private opinions of certain individual Socialists, and this objection might have weight were it not for the fact that organized socialism has picked up these utterances and published them to the world as a necessary outcome of Socialist philosophy. And when it is shown that the philosophy of socialism makes necessary this antireligious attitude the reasons for the frequent socialistic attacks upon religion and the church are manifest.

For propaganda purposes the Socialist papers and agitators will tell you that socialism has nothing to do with religion; but if you will turn to their literature you will find that they have said more about religion than any other subject, with the possible exception of the woman question, and that question itself, from the Socialist standpoint, involves a discussion of religious authority. Now, the fundamental of socialism is "economic determinism," i. e., economic causes have produced the present system of organized society with its prevailing ideas of philosophy, history, economics, government, morals, and religion. This doctrine grows out of the materialistic conception of history, which bears the names of Karl Marx and Frederick Engels, the founders of modern revolutionary socialism.

It is a theory of social evolution, and the conception is borrowed from the Darwin and Wallace theory of organic evolution, and while a great many intelligent Socialists are not willing to go so far, the vast majority of the leaders make it economic fatalism. With one voice do they declare that the existing order has been reached by certain methods of producing and effecting the exchange of the necessities of life, and that the Socialist state will be reached by the same route.

The philosophy of determinism was familiar to the Greek philosophers some centuries before the Christian era. Democritus developed in his system the atomical theory of the origin of the universe; i. e., the world was formed by the eternal motion of an infinite number of invisible atoms "which differ from one another in form, position, and arrangement, and which have a primary motion which brings them into contact, and forms innumerable combinations," resulting in the phenomena and productions of nature. Other philosophers elaborated this scheme, attributing to the atoms a certain determining quality, impelling them to a given development, bringing the world to its present stage without the intervention of a first cause. Thus the world came and thus the world is ushered on by the cold dead hand of this atheistic fatalism.

In elaborating their theory, Marx and Engels, both being uncompromising atheists, wove their atheistic dialectics into the very foundations of the "cooperative commonwealth," the communistic dream of socialism; and to remove the atheism is to wreck the commonwealth. It is not charged here that socialism is atheistic because Marx and Engels were atheists, but because as a movement it accepts and proceeds upon the atheistic dialectics of Marx and Engels. When Marx said that "The religious world is but the reflex of the real world" he meant to exclude religion from the Socialist philosophy. But he said more. He said, "Christianity, like all religions, is but an expression of material conditions, a direct outcome of social relations, the unsubstantial image of a world reflected in the muddy pool of human intellect."

Practically every Socialist of any consequence in the Marx party who has written on social economics has written from the standpoint of the atheist. The leaders, from the beginning, have been bitterly anti-religious. This is not denied by the ordinary rank-and-file Socialist. Isolated persons connected with the Socialist movement have not been selected to show that socialism is committed to atheism. The charge is made emphatically that the overwhelming majority of Socialist leaders the world over have preached and do preach atheism as a necessary part of Socialist doctrine; that their works are published, advertised, and sold as Socialist literature by Socialist publishing houses, and indorsed and defended by the leading Socialists of the world. The charge is further made that the Socialist literary classics are the dirtiest literature in print to-day.

The International Socialist Review, published in Chicago and edited by Charles H. Kerr, who is also manager of the Socialist publishing house, is blatant in its atheistic teachings. Its editor has published a little pamphlet entitled "The Folly of Being Good." From the Socialist standpoint "being good" is the height of folly.

Ernest Belfort Bax, the prophet of British socialism, is considered authority by the Socialists the world over. In his Religion of Socialism, Scribner edition, page 52, he says:

"In what sense socialism is not religious will be now clear. It utterly despises the 'other world' with all its stage properties—that is, the present objects of religion."

Again, on page 97, he says:

"As to the ethical teaching of Christ, with its one-sided, introspective, and individualistic character, we venture to assert that no one acquainted with the theory of modern scientific socialism can for one moment call it socialistic."

Mr. Bax ridicules the idea of "Christian socialism, so called," and calls it an "attempt to pour new wine into old bottles." Speaking of so-called Christian Socialists, he says, page 98:

"Our Neo-Christian friends may, without any special inconsistency, refuse to be saddled with 'Semitic myths,' or may even contend * * * that the Christianity they profess is independent of the canonical Hebrew Scriptures considered as a whole. But surely they, at least, must be prepared to stand by the accepted character and teaching of their titular founder. It is surely fair to confront them with this. Now, it is upon the ground of this traditional character and teaching that we are prepared to join issue with them when they assert its socialistic nature. We can readily understand the charm it exercises on certain minds. We know that inherited tendencies, upbringing, and the like, all conduce in sensitive natures to clothe with the rich and glowing hues of their own beauty and emotion a shadowy figure, in which those who have divested themselves of these tendencies and view things with the colder eye of impartiality see at best a weak but impulsive personality. But it is only natural that these latter should resent with some indignation the continual reference of ideal perfection to a semi-mythical Syrian of the first century when they see higher types, even in some now walking this upper earth, but in vulgar flesh and blood and without the atmosphere of 19 centuries to lend enchantment to them.

'How many are there not and have there not been in the modern Socialist movement who do their work, give up their all, without posing as Messiahs, but choosing rather the better part of sinking their individuality in their cause?"

The above blasphemous screed is not from an ignorant, irresponsible soap-box howler, but from the pen of one of the great Socialist leaders of the world. To say it has no authority in Socialist circles is to fly in the face of all Socialist philosophy and study. To repudiate Bax and claim to be a Socialist is like repudiating Paul and claiming to be a Christian. Saddling Bax on the Socialists is like saddling Paul on the Christians. Bax is recognized in Socialist circles as one of the greatest exponents of Socialist philosophy in the entire movement, as Paul was recognized in the early church as one of the greatest exponents of Christian doctrine; and the Socialist who denies his authority is either ignorant of the history and doctrines of Socialism or willfully misstates the facts. In the chapter on "The capitalistic hearth," pages 136–145 of the volume just quoted, Mr. Bax makes a vicious attack upon religion and the family. He speaks as follows:

"The throne, the altar, and the hearth—the political emblem, the religious emblem, and the social emblem—have long constituted the mystic trinity to which appeal is made when popular class sentiment is required to be invoked against influences disintegrative of the status quo. * * * Beneath throne, altar, and hearth in their present form all Socialists know that there lies the market. They know that the market is the bedrock on which the throne, the altar, and the hearth of the nineteenth century rest, and that this bedrock shattered the said throne, altar, and hearth are doomed."

He further says of the home: "We defy any human being to point to a single reality, good or bad, in the composition of the bourgeois family. It has the merit of being the most perfect specimen of the most complete sham that history has presented to the world."

"There are no holes in the texture through which reality might chance to peer. The bourgeois hearth dreads honesty as its cat dreads cold water."

Again he says: "The transformation of the current family form, founded as it is on the economic dependence of women, the maintenance of the young and the aged falling on individuals rather than on the community, into a freer, more real, and, therefore, a higher form, must inevitably follow the economic revolution which will place the means of production and distribution under the control of all for the good of all. The bourgeois 'hearth,' with its jerry-built architecture, its cheap art, its shoddy furniture, its false sentiments, its pretentious pseudoculture, will then be as dead as Roman Britain."

Bourgeois class means the middle class of society, the moral and religious strength of the world, the support of religion and patriotism in every nation on earth. Of course, if socialism can succeed in tearing down the altar and the hearth of the middle class, there is some hope of organized insanity and debauchery taking possession of the world.

If there is any one thing prominent in socialist teaching, it is this, that Christianity is the religion of the capitalist class, established for the sole purpose of bolstering up the monogamic family and the private ownership of property. In order to destroy private property, socialism would destroy the home, the family; in order to destroy the family, it must destroy Christianity, the influence which it holds responsible for the maintenance of the private family. And to the complete overthrow of these sanctities the current socialism is solemnly pledged, if the plain statements of 90 per cent of its world leaders are to be taken seriously.

In Socialism: Its Growth and Outcome, by Morris and Bax, page 13, is found the following, which serves to strengthen the charge here made:

"It is necessary that a certain code of morality should be supposed to exist and to have some relation to the religion which, being the creation of another age, has now become a sham. With this sham, moreover, its accompanying morality is also steeped, although it has a use as serving for a cover of a morality really the birth of the present condition of things, and this is clung to with a determination or even ferocity natural enough, since its aim is the perpetuation of individual property in wealth, in workman, in wife, in child."

Most men since Plato who have believed in a community interest in property have believed also in a community interest in women. Since the monogamic family springs from a "sham religion," the aim of which, according to socialism, is to perpetuate the private ownership of property, the family can not be destroyed without destroying first the "sham religion." Keep in mind that the "system" referred to by the socialist propagandist means the whole of the existing order. On pages 17–18 of the volume just quoted we have this:

"In this brief survey of the various phases of modern life—its family relations, morality, religion, politics, and art—the reader who has not yet studied socialism may see nothing but pessimism."

From the foregoing quotations, it is plain that socialism has something to do with religion. I give here a statement from August Bebel, the prophet of German socialism, and one of the great leaders of the movement. He summarizes the Socialist program in the following words:

"We aim in the domain of politics at republicanism; in the domain of economics at socialism; in the domain of what is called to-day religion, at atheism."—Bliss's "Handbook of Socialism," page 211. Mr. Bebel is the author of that great Socialist work, "Woman Under Socialism," published, sold, indorsed, and defended by Socialists everywhere, and which fairly reeks with the degradation and debauchery of Socialist philosophy—the work of a disordered brain and a depraved heart. On page 353 of this work he utters himself as follows:

"It is natural that with the full-blooded Yankee the leading rôle be played by the 'dear God,' who after all is but the product of historical development. Hypocracy, or perhaps also ignorance in matters that concern religion, is nowhere as stupendous as in the United States."

Again, on page 145, he speaks of the church as the natural outgrowth of the "system," and places it in the same class with prostitution:

"Prostitution thus becomes a social institution in the capitalist world, the same as the police, the standing armies, the church, and wage mastership."

The Case Against Socialism, page 342, quotes the following from the Sozial Demokrat, the official organ of the German Socialist Party:

"As a matter of fact, it must be candidly avowed Christianity is the bitterest foe of social democracy. Just as so utterly dunderheaded a religion as Christianity could only strike root at all 2,000 years ago in a humanity that had completely degenerated, so ever since its efforts have always been directed not, as one might suppose, to rid the world of misery and destitution, but rather to use them for its ends and as a cloak for its other vices and enormities. When God is driven out of the brains of men, the whole system of privilege by the grace of God comes to the ground, and when heaven hereafter is recognized as a big lie, men will attempt to establish heaven here. Therefore, whoever assails Christianity assails at the same time monarchy and capitalism."

The above is true socialist philosophy, in that it considers Christianity as a necessary part of the present system, and, further, in that it makes atheism necessary to socialism. The triumph of socialism hinges on driving the idea of God out of the minds of men. Signor Ferri, the great Italian socialist, states that "the absence or lessening of the belief in God is one of the most powerful factors in the extension of socialism." (Socialism, Positive and Negative, pp. 48–51.)

In the June, 1908, number of the International Socialist Review, the leading publication of the American party, Isadore Ladoff, in an article under the caption "Socialism and mysticism," makes a bitter attack upon religion. Under a subtitle he treats religion as "The common enemy: Religion, the foe alike of the freethinker and the Socialist." Let us notice a few passages from this article:

"The priests invented theocracy in order to establish their class rule over the unreasoning masses of humanity, scared by hell and damnation, and coaxed by paradisiacal bliss into submission and obedience.

"The overwhelming majority of Socialists are freethinkers. (They only do not believe in the wisdom of arousing religious antagonism, having to contend with a great deal of antagonism, having to contend with a great deal of antagonism of all imaginable kinds.) * * * The struggle is on between materialists, freethinkers, and Socialists on the one side, and the church and the exploiting classes on the other. That there are freethinkers who are not logical enough to be Socialists, and that there are some Socialists who are not inconsistent enough to imagine themselves to be Christians, proves only that men are not always logical and consistent.

"If all freethinkers would have the courage to discard their middle-class prejudices and take the trouble of studying up Socialism sine ira, they would soon find that freethinking means scientific thinking, not only on religion, but likewise on social-economic matters, and that Socialism is nothing else but the result of such thinking."

Since the days of Marx and Engels, organized socialism has had to face the question of religion. Atheism is nowhere more pronounced than in the socialism of Germany, and for years the German party has carried in its platform a plank committing the movement for purposes of political expediency to a position of neutrality on questions of religious belief. The religious plank was written and run through the national convention by atheists of the most uncompromising order—atheists who treat atheism as a necessary part of Socialist philosophy. But atheism was not getting votes and was impeding the progress of the movement among the masses. What is true of socialism in Europe is true of socialism everywhere. The American party has in the past few years been compelled to consider the question of religion in its relation to socialism. The question came up in the national convention in Chicago in 1908, and a plank was offered for adoption as a part of the national platform. Here I offer some extracts from the speeches of the delegates in that convention on the adoption of the religious plank:

Delegate Lewis: "I am among those who sincerely hoped the question of religion would not be raised at this convention. I am willing to concede so far that we shall let sleeping dogs lie. I know that the Socialist position in philosophy on the question of religion does not make a good campaign subject. It is not useful in the propaganda of a presidential campaign, and therefore I am willing that we should be silent about it. But if we must speak, I propose that we shall go before this country with the truth and not with a lie. I believe in Socialist scholarship, and I voted to have scholars on this platform committee in that sense; men who understand the Socialist philosophy, and we have at least half a dozen on the platform committee who know that the question of religion is a sociological question; it is an anthropological question; it is a question of chronology; it is a question of economics; it is a question of theosophy. There are few domains of modern thought that do not directly affect the question of religion. And when you say that it is merely a question of private conscience you fly into the face of the science and learning of the day. Now, I do not propose to state in this platform the truth about religion from the point of view of the Socialist philosophy as it is stated in almost every book of standard Socialist literature; but if we do not do that, let us at least have the good grace to be silent about it and not make hypocrites of ourselves."

Rather than lie, as the platform declaration does, Delegate Lewis preferred to be silent.

Delegate Hillquit: "The fact that Comrade Lewis, as a scholar, as a student of psychology, of history, of ethics, and of everything else, has in the domain of religion come to the position of an agnostic, and that 99 per cent of us have landed in the same spot, does not make socialism agnostic, nor is socialism Christian, nor is socialism Jewish."

Ninety-nine per cent of their students in pursuing their philosophy have become agnostics; yet socialism is not agnostic!

Delegate Unterman: "Comrades, no one will accuse me with any sympathy with Christianity, either as a church or as a religion. I am known in the United States as a materialist of the most uncompro-

mising order, but I want it clearly understood that my materialist philosophy does not permit me to strike this plank out of the platform. I want it understood that my materialist dialectics do not permit me to forget the exigencies of the moment for our ideals in the far future. * * * The Socialist platform in Germany has carried this same plank for years, and the man who wrote it was the most uncompromising materialist in Germany, Karl Kautsky. Karl Marx and Frederick Engels were surely known as uncompromising Socialists, and they agreed with this platform. Would you expect to go out among the people of this country, people of different churches, of many different religious factions, and tell them that they must become atheists before they can become Socialists? That would be nonsense. We must first get these men convinced of the rationality of our economic and political program, and then after we have made Socialists of them and members of the Socialist Party, we can talk to them inside of our ranks, talk of the higher philosophy and of the logical consequences of our explanation of society and nature."

The intention to go out among the people of this country and deceive them as to the attitude of the Socialist philosophy toward matters of religious belief as taught in standard Socialist literature is apparent. Every person at all acquainted with the Socialist philosophy, so called, knows that it is based on the "frankest and most outspoken revolutionary materialism," which certainly commits international socialism to a position of hostility to all religion.

Delegate Unterman further said: "This declaration that religion is a private matter does not mean that it is not a social matter at the same time. It merely means that we shall bide our good time and wait until the individual is ready, through his own individual evolution, to accept our philosophy."

Delegate Farrell: "Cut out the question of religion altogether. I know that there have been men of practically every denomination known on the American continent in my local, and the question of religion has been discussed, and it has not benefited us one whit."

Delegate Strickland: "If we have a common social origin, if both religion and social democracy have a common social origin, and if economic determinism be true, and if the moral and ethical principles of society be based ultimately upon the manner of economic production, how dare you then say that we have nothing to do with religion!"

Delegate Herman: "So far as Christianity is concerned, yes; we are opposed to Christianity."

A number of preachers of the various Protestant denominations sat in that convention through the long-drawn-out attack on religion, and only one opened his mouth, the Rev. Mr. White, delegate from Massachusetts, and here is, in part, what he said:

"I am perfectly frank to say to you that Christianity as some Christians understand it to-day is bound to go under. It has got to go down."

After a long debate the "religious plank" was adopted, and here it is:

"The Socialist Party is primarily an economic and political movement. It is not concerned with matters of religious belief."

We must consider the word "primarily" as it appears in the platform. In the light of what the leaders said on the subject we can only place the same construction on the word as here used that we are forced to place on the word "immediate" as used in their list of political demands. Socialism does not believe in the political state as at present organized, and their political demands are only for immediate use, as a means of getting votes. Political government they propose to use simply as a means of getting into power, a scaffold to be used in the period of transition, after which it will be cast aside as so much rubbish. Of course, matters of religious belief can have no place in a purely political program; this is the political stage, and you may be a Christian, a Confucianist, a Mohammedan, until the time when the workers seize the whole power of political government. "Primarily" the last vestige of the system of "mine and thine" must be swept away and the system of "ours" will take its place. But take warning here. The word "primarily" means that they do not "forget the exigencies of the moment for their ideals in the far future." For the present you may have all the gods you want, so you confine them to their temples.

Delegate Berger (later Congressman), of Milwaukee, is willing to bear the blame for bringing up this matter of religion in the convention. And he voted for the adoption of the plank. Yet he said, "I am known not only in Milwaukee, but wherever our papers are read, as a pronounced agnostic." Berger's agnosticism he considers a necessary part of his socialism, and he speaks with the voice of authority in the American party.

The 1912 platform carries no religious plank, but the report of the executive committee of the National Lettish Organization, one of the foreign-speaking organizations under the wing of the American party, in its report to the national convention gives expression to its religious feelings as follows:

"In order to put a check upon the deadly influence of the teaching of the church upon men's minds, it is necessary to disseminate knowledge about nature—a task which has been entirely neglected in this country. In destroying superstition about nature, we take away one of the foundations on which every religion rests * * *."

"Science is the best antidote against religion. When science comes in, beliefs and creeds must give way. Instead of belief and faith, we put conviction based on freedom of conscience. Freedom of conscience is broader than freedom of belief. It includes both freedom of belief and freedom of nonbelief. A man can believe what he will. He may not believe anything. * * * The ethics of socialism and religion are directly opposed to each other. Christianity preaches brotherly love for all. Socialism discriminates among classes. It preaches the class struggle among those whose interests are opposed. It does not create the class war, but it does explain it, while the church tries to conceal it. * * * Socialism bases all its ideals on this 'sinful world'; the church can not help preaching about some other world. * * * The church puts its stamp of approval (good) or disapproval (bad), according to some superhuman ethics, dictated by a being unknown to mankind. * * * As long as the gods remain confined to their temples they can cause no direct harm to the class struggle." (Proceedings National Convention, pp. 247–248.)

Mr. Robert Blatchford is one of the most popular writers in the movement. His writings are published by the American party, and thousands of his books are sold annually to the masses in this country. Mr. Debs speaks of him as "the inspired evangel" of social emancipation. In his work, "God and My Neighbor," page 143, he thus compares the Socialist doctrine of determinism with the doctrines of Christianity:

"If you wish to realize the immense superiority of the determinist principles over the Christian religion, you have only to imagine what would happen if the determinists had a majority as overwhelming as the majority the Christians now hold."

He says again, page 145: "A religion built upon the doctrine of free will and human responsibility to God is built upon a misconception and must fail. Christianity is a fabric of impossibilities erected upon a foundation of error."

Again, page 189: "I oppose the Christian religion because I do not think the Christian religion is beneficial to mankind, and because I think it is an obstacle in the way of humanism."

In beginning the last chapter of this volume, he says: "I have been asked why I have gone out of my way to attack religion. * * * In reply I beg to say that I have not gone out of my way to attack religion. It was because I found religion in my way that I attacked it; that I am working for socialism when I attack a religion which is hindering socialism." And the closing sentences of this Socialist classic are as follows: "Let the holy have their heaven. I am a man and an infidel. And this is my apology. Besides, gentlemen, Christianity is not true." Thus writes "the inspired evangel of social emancipation."

Socialists have in nearly all the larger American cities what they call "Socialist Sunday schools," with lessons for children prepared by the masters. The New York City Mission and Tract Society has translated a catechism, published by Geringer, of Chicago, for use in the Bohemian socialistic-anarchistic schools. A few excerpts from this catechism will throw further light on the Socialist propaganda:

Question. What is God?

Answer. God is a word used to designate an imaginary being which people of themselves have devised.

Question. Did Christ ascend into heaven?

Answer. He did not; what the church teaches is a nonsensical fable, because there is no heaven and there was no place to ascend to.

Question. Is Christianity desirable?

Answer. Christianity is not advantageous to us, but harmful, because it makes of us spiritual cripples. By its teachings of bliss after death it deceives the people. Christianity is the greatest obstacle to the progress of mankind; therefore it is the duty of every citizen to help wipe out Christianity. All churches are impudent humbugs.

Question. Should we take the name of God in vain?

Answer. Yes: because the name of God has no meaning.

Question. Is adultery a sin?

Answer. It is not a sin, because intercourse with the opposite sex is natural to every person.

This is as far as I will pursue the study of The Little Catechism, as many of its utterances are too vile to read before an audience of civilized people.

But, pursuing this phase of our subject a little further, I beg to introduce again Mr. Bebel, whose authority is nowhere denied in Socialist circles. On page 343, Woman Under Socialism, he gives us a glimpse into the "free society" of the future, so dear to the hearts of all the Socialist leaders:

"Under the proviso that he inflict injury upon none, the individual shall himself oversee the satisfaction of his own instincts. The satisfaction of the sexual instinct is as much a private concern as the satisfaction of any other natural instinct. None is, therefore, accountable to others, and no unsolicited judge shall interfere. How I shall eat, how I shall drink, how I shall sleep, how I shall clothe myself is my private affair; exactly so my intercourse with a person of the opposite sex."

Davidson, in The Old Order and the New, page 164:

"All unions shall be unions of affection and esteem, and children, as of old, will primarily be the children of the mother. Her right to select the father of her children will be absolute. In such a society all children will be equally 'legitimate,' and the Seventh Commandment will become practically obsolete."

But, to come closer home, I offer here an excerpt from an editorial appearing in an Oklahoma Socialist publication. One of our preachers asked what would become of the home, the family, and the Christian religion under socialism, and this Socialist paper answered thus:

"If socialism does not eventually do away with the home, the family, the marriage relation, and the Christian religion as we now have them, as well as private ownership of property, then we hope the people will sidetrack socialism and send it direct to hell without change of cars."

The Comrade, a Socialist paper published in New York, says editorially:

"The ethics of Christianity, like its practices, are characterized by a monstrous disregard of common life. Christianity and tyranny are, and for ages have been, firmly allied. * * * There is no wrong, however terrible which has not been justified by Christianity, no movement for human liberty which has not been opposed by it. Its very basis is a lie and a denial of the basic principles of socialism."

Truth, a Socialist organ of San Francisco, says:

"When the laboring men understand that the heaven which they are promised hereafter is but a mirage they will knock at the door of the wealthy robber, with musket in hand, and demand their share of the goods of this life now."

Wilhelm Liebnecht, an international figure in the Socialist movement, says: "It is our duty to root out the faith of God with all zeal, nor is anyone worthy the name who does not consecrate himself to the spread of atheism."

A recent article in a leading American magazine closes with these words: "The civilization of social democracy will never befoul itself with Christianity."

George D. Herron, once a gospel minister of prominence, but who is now a Socialist leader, recently wrote in the Advance as follows: "Christianity stands to-day for the lowest and basest in life. The church sounds the lowest note in human life. It is the most degrading of all our institutions, and the most brutalizing in its effects on common life."

George D. Herron got so full of socialism that he forsook the wife of his youth and the children of that holy union, and shocked the civilized world by a "socialist wedding," in which he and a young female agitator stood up in the presence of a number of the American party and were "married" without license or priest, each of them avowing in that public manner the "love" which they had previously enjoyed in private. Socialism is the only movement in the world that offers a defense and a sure refuge for such moral lepers as Herron. This is the man who wrote the platform for the American party in 1904, and so acceptable was his work and so in keeping with socialist ideals was his conduct that he was placed on the international committee and is now residing in Italy.

You will note that the greater part of this address is taken up with quotations from socialist authorities. I have gone to the proper sources for my information, taking the plain statements of the leaders as to the aims and purposes of socialism; and if I have misinterpreted the movement and charged against its doctrines and policies that which it does not avow, the fault is with the leaders and not with me. If the Socialist Party wishes to disavow the doctrines here charged against it,

the only way to do it is to stop flooding the world with those publications which hold in contempt all divine laws and the civil restraints which are placed about the dark passions of mankind. In every nation on earth socialism is against God, the church, and civilization; against all rule and authority. It spits upon all the flags of Christendom and calls them dirty rags. It points to the thrones of all the worlds, and says they are without authority. It opposes Godship, priestship, kingship. It sweeps the universe and leaves it empty.

The Rev. John Wesley Hill, of the Methodist Episcopal Church, New York, speaking of Christian socialism, so called, says:

"And now arises under this blatant and blasphemous system, appropriating the magic touch of Christian ethics, filching the shining garments of Christian truth, the so-called Christian socialism which, like an infection, is permeating academies, colleges, social and ethical organizations, and is invading the Christian Church itself. But may we not in all candor ask, 'How can a system which denies the religion which he taught, which regards that religion as ignorant superstition, and declares that there is nothing for Deity to do, be made to harmonize with either the spirit or teaching of Christ?'"

Its philosophy literally seizes the Almighty by the collar and pulls Him out of the skies. There is no more a Christian socialism than there is a Christian atheism, and the time is ripe for this farce which is being played under the title of "Christian socialism" to be branded in plain terms as a system of hypocrisy, treason, and gruesome materialism, and hissed from the stage.

There is no more a "Christian socialism" than there is a Christian atheism, and its irreligious basis stands exposed by its recognized leaders everywhere. "Its sophistry and duplicity are revealed" by the public utterances of its chosen exponents in the highest places.

It is the concentrated degeneracy of hell and utter darkness, which would overthrow the existing order, shatter the foundations of the home, and lay waste the noblest and most cherished institutions of Christian civilization.

## American Protection.

A proper policy for safeguarding of both our natural and our human resources.

## EXTENSION OF REMARKS

OF

# HON. NICHOLAS J. SINNOTT,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. SINNOTT. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I desire to print extracts from speeches of Hon. Charles E. Hughes on "American Protection," delivered at Nashville, Tenn., September 4; at Lexington, Ky., September 5; and at Cincinnati, Ohio, September 5, 1916:

AMERICAN PROTECTION.

[From the speeches of Charles E. Hughes at Nashville, Tenn., Sept. 4; at Lexington, Ky., Sept. 5; and at Cincinnati, Ohio, Sept. 5, 1916.]

It seems to me that we are entering upon a very important period in our history. When I look on the other side of the Atlantic I see millions of people engaged in fighting. They have withdrawn from the ordinary occupations of peace. They are not making goods except as some of them are making munitions of war and endeavoring to supply the armies in the field and to do the best they can with their restricted output to care for their own national life. But to a large degree enterprise is halted while this awful struggle goes on.

There will come a time when that struggle will cease. Then the millions of men now in the trenches will return to work. Then there will be a great increase in the productive capacity of every one of these nations. These nations have learned themselves. They know more of their own resources and capacity than ever before in their existence. They are equipped with discipline and self-knowledge for the pursuits of peace as they never have been equipped before. A new Europe will emerge from the battle fields of the present day. A new United States must confront a new Europe in the commercial rivalry of the future. We must take a long look ahead and decide what is best for the American people. We must decide it calmly. We must decide it deliberately. We must decide to face the facts and realize that the great questions are economic questions, that they are business questions which will touch the life of every man, woman, and child in this country.

I take a very broad view of the situation, knowing that we ought to plan not for a few years, but for a long period. We must, therefore, take account of the human resources of this country and protect human life and improve human conditions to the utmost of our ability. We must safeguard the children of our people and prevent their being exploited too early in the industrial struggle. Years ago when I had the privilege of being the executive of New York I presented to the legislature measures for the restriction of child labor. A series of measures was enacted to the great benefit of the State. In the interests of the future of our race we desire to protect the women of our Nation from being exploited too arduously in industrial life.

SAFEGUARD THE TOILERS.

Further, I believe that we should safeguard in every possible way the safety of men toiling with their hands. We should provide so far as possible measures designed to insure sanitary and wholesome conditions of work. I believe in reasonable hours of work, in provision for old age, in doing all we can to make the persons in this community and every other through our land feel that they are fellow workmen cooperating together in a prosperity in which they share justly for the upbuilding of the United States and the diffusion of contentment and happiness.

In connection with any matter in which both the Federal Government and the States have activities, I have always thought that the Federal Government's board or bureau or organization ought to be a pattern for the entire country. It would not be possible for me to-night to suggest in any detailed way how we ought to avoid clashes between State and Nation in the development of the great prosperity which this country should have and which it can not have without stability. But one of those ways, and a very important one, is to have the Federal bureau or board that deals with the subject the most competent possible and its administration as thorough as possible, so that by the very force of the direction of its ability and competency State boards and bureaus will be led to pattern after it and a desirable uniformity thus secured.

We have laid at the present time a very just emphasis in this country upon the compensation law. I do not know of anything—and I speak as one who has been a judge—that is more of a reproach to our country and our system of jurisprudence than the wastefulness of our present negligence system of law. We have delays; we have the uncertainties of jury trials; we have invitations to perjury; we have contingent fees, so that those who emerge successfully from this very uncertain hazard of litigation divide the recovery in a very large measure with attorneys. My view is—and I think it is the view of the intelligent students of this labor problem—that in a hazardous occupation the risk of injury should be regarded as a risk of the business and dealt with by adequate and fair compensation laws.

I believe that we should have not simply compensation laws for those employed by the Government, as is provided by the bill now before Congress, but that we should have adequate and fair compensation law with respect to those engaged in hazardous occupations in the course of interstate commerce, and therefore subject to Federal control. Congress, it may be said, has legislated for employers' liability in the case of railroads and has greatly perfected our negligence law. But it has not gone far enough. As we look to this new economical era upon which the United States is entering we must, in my judgment, get rid of the wastefulness of our present system and put protection to the life and limb of the laborers of this country upon a sound basis by wise compensation laws, Federal and State.

ARBITRATION OF DIFFERENCES.

I will say further that I believe there is no grievance with respect to labor that can not be settled by a fair, candid examination of the facts. In the past we have had to deal frequently with the opposition of employers to the principle of arbitration. Sometimes they have refused to arbitrate disputes. Public opinion has been against them. I believe in arbitration, and I stand here firmly for the principle of arbitrating all industrial disputes, and I would not surrender this position to anybody in the country. I believe that anything that is right in this country can be settled right. What is our great republican Government? What are our free institutions? We have come down the long course of history with the people fighting slowly, slowly, now with defeat and now with victory, for a recognition of the reign of reason instead of a reign of tyranny and force. We have emerged into a great country, peopled with intelligent men and women. We have educational opportunities on every side. We have an alert electorate. We have people who understand expertly all the various activities of our life from every possible side.

Now, then, I stand for two things: First, for the principle of fair, impartial, thorough arbitration; and, second, for legislation on facts according to the necessities of the case. And I am opposed to being dictated to either in the executive department or in Congress, by any power on earth before the facts are known and in the absence of the facts.

We have a great country and a great future; but it can only be preserved in one way: That way is the way of honest, fair investigation and candid treatment. Show me the way that is right and I will take it; but I will not take any way that I do not know anything about.

PROTECTION TO AMERICAN INDUSTRY.

I am here to declare to you as my sober judgment that I do not think the prosperity of this country can be maintained without the application in a fair and faithful manner of the doctrine of protection to American industry.

If we are to have any social justice, any measures of improvement in this country, we must first have conditions of prosperity. This country in its industrial mechanism is like a watch. It is not so difficult to get it out of order. You create a little misapprehension and distrust; you create contraction, an unwillingness to go ahead with new enterprises, and what do you have? You have unfailingly a reduction in output. That means a closing of factories and failure to extend plants and failure to add new plants. You have a condition then where men, instead of having plenty of work to do, are thrown out of employment. We can not stand that in this country. We must have conditions under which American enterprise goes ahead or we do not accomplish anything for labor, for capital, for anybody on earth; because to accomplish anything for anybody we must have stable conditions under which enterprise can go forward.

Now, then, to return to what I said a moment ago, we have on the other side millions of men now fighting who a little later will go back to their industries. They will try to pay their bill—their war bill—by goods. You need not suppose that because of the war they are wasted and unable to work. The actual loss in life is not so great as you may think. It is great enough. No one deplores the carnage more than I. But back of that there is an ability and discipline, a trained talent, which will be counted on the business side when the nations of Europe return to work.

What are we to do? Are we to be deceived by our present conditions of trade? Why, the fact that these millions over there are fighting and not producing goods opens the avenue for all kinds of American supplies. Our breadstuffs, our woolen stuffs, our manufactures of steel, our manufactures of all kinds, our horses, our mules, our harness, our hay—every kind of thing that we produce has been going abroad in vast quantities, simply because this demand was created by the withdrawal from the ordinary course of production of all these men who are fighting. There is no doubt on earth but when they return to production we shall have greater reason than ever before to look after our American industries.

Does anybody suppose that the American people are so lacking in memory that they have forgotten what took place after the passage of the present tariff law and before this great demand caused by the European war arose? Why, there were 300,000 men out of employment in New York City alone. There was not a great State in this country where the jobless were not walking the streets.

REVENUE TARIFF NOT AMERICAN DOCTRINE.

You need not talk to me about a tariff for revenue only. I do not care what your politics are. I say that is not an American doctrine and you can not live under it in this country.

We must have common sense about these matters. If men are paid a higher rate of wages in this country than they are paid abroad in producing the same article, that article can come in cheaper than our article can be made and sold, and it stands to reason that our article is not going to be made and sold and that the foreign article will take its place.

Do not misunderstand me. Nobody is going to get a tariff for any selfish purpose in opposition to the public interest if I can prevent it—not a bit. We ought, however, to be able to frame our laws in such a way that we can use the power of government to foster and encourage. It is perfectly idle to say that all that is necessary for business men is to increase their skill, is to increase their efficiency. I am very glad to see every increase of skill and efficiency; but there is a limit, and when you have a wage scale against you, when you have conditions of living against you in a particular kind of manufacture or production or agricultural pursuit or any legitimate activity, you have a right to reasonable protection against the destruction of your industry or activity in favor of cheaper paid labor abroad.

I am for a protective tariff, honestly devised, because it protects the American workingman and keeps employment for him. I am for it because it enables new industries to be established. We have learned in this war that we need to safeguard our economic independence, and we ought to do it.

I am for it because in many cases it enables industries to be maintained which otherwise would close their doors. In this new economic era I want to see American enterprise go forward.

STANDS AGAINST MONOPOLY.

I have stood as much as any man in this country, and I say it without rashness, for the maintenance of the public interest against any kind of combination or monopolistic practice, against every effort to cheat the public out of its rights. I came into public life through that door, and I have held up that flag ever since as a public man. I would leave the platform before I would surrender it for a moment. But I count it possible in this country, with all its strength and people, its finely developed men and women, its natural and human resources—I count it possible to be able to foster and encourage American enterprise and legitimate business and to free it from arbitrary restrictions that do not help the public interest, but merely stand in the way of what is right and fair for the benefit of all the American people.

Our opponents don't believe in a protective tariff. I am going to read you the Democratic platform. Four years ago our friends said:

"We declare it to be a fundamental principle of the Democratic Party that the Federal Government under the Constitution has no right or power to impose or collect tariff duties except for the purpose of revenue."

That is a doctrine which is not in accord with our interest. I don't think we are going to get any improvement along that line. I believe, if we are going to have the doctrine of protection applied in such a way as to safeguard the interests of this country and put us in a proper condition to meet the economic struggle after this war is over, it must be applied by those who believe in it. That is my judgment.

BUILD UP INDUSTRY.

I wouldn't have any satisfaction in addressing the electorate in my present capacity if I didn't think we could really do something to build up the United States. I have pointed out the cardinal doctrine, the application of which can be made in every community. You can go through this broad land as I have in the last few weeks and you can see in the different States enterprises and activities which need to be fostered and encouraged by proper protection against unfair competition with underpaid labor abroad; and I submit, after you have calmly reflected upon it and have thought what condition we are going to be in when Europe turns to peace, that we do need that doctrine faithfully applied in this country.

MAINTENANCE OF AMERICAN RIGHTS.

I want to say these further words: I stand for the maintenance of all American rights on land and sea, without fear or favor or hesitation.

We have had occasion in the last three years to consider our duties to our citizens. We have had in connection with the Republic of Mexico, this situation: The question was not whether we should recognize Huerta or withhold recognition of him. The question was not of our humanitarian aspirations. If you are going to have humanitarian impulses in connection with international affairs, you must be careful to be correct in their application, and to do what you ought to do, and not to do what you ought not to do. The first necessity in connection with Mexico was to assure the fact that the lives and property of American citizens should be protected. That was the first duty. That is a primary duty. It doesn't make any difference what you think of Mr. A or Mr. B, whether you think he is a good man, or worth much, or not. American citizenship is not a cheap thing; and no matter how humble the individual who holds it, this country must protect him in his rights as an American citizen.

The trouble in our relations with Mexico is this: That we had a clear duty to perform in protecting our people and we did not perform it. We left our people to be murdered in Mexico, their property to be destroyed. It was not a question of recognizing or not recognizing Huerta. We could have said to him:

"We won't recognize you unless you have a stable government; unless you can perform your international obligations. Unless you have a real government that can furnish protection, we will not recognize you. If you have such a government, we will, but not otherwise."

That was not the point. We not only failed to recognize Huerta, but we proceeded to dictate our control over Mexican politics. We said that Huerta should not be a candidate even at a Mexican election. No Mexican could understand that. We said in the same breath, "We are not interfering with Mexican affairs." Nobody in the world could understand that.

Some of our men from a ship, men who had gone ashore at Tampico, were arrested. They were at once discharged and full apology was made. But our admiral demanded a salute. The administration said there should be a salute. Congress was appealed to for authority to use the armed force of the Nation. While this was pending in Congress, a ship loaded with ammunition for Huerta was about to go into the port of Vera Cruz. Instantly we ordered our ships to Vera Cruz, and, of course, that was war; and, of course, it was intervention—both

of the plainest kind. A battle ensued. Several of our boys were killed; several hundred Mexicans were killed. What happened? Did we get any salute? Not a bit! Was the ammunition prevented from reaching Huerta? Not at all. It simply went to another port and we allowed it to go in. We got no reparation.

WOULD HAVE PROTECTED AMERICANS.

Meanwhile—and this is the sorry part of it—meanwhile, the Mexicans became so incensed at our interference with their affairs that they treated our people within their borders with the greatest indignity. Many of our people were massacred and hundreds of them gathered near our ships at Tampico, thinking they were going to be rescued. But conditions had arrived at such a pass that our admiral did not dare to go to relieve those people, because he was afraid that our citizens in the outlying districts would be put to death; and so British and German warships took off at Tampico the American citizens whom we did not dare to rescue.

Now, these are all well-recognized facts of history, my friends——

A VOICE. What would you have done?

Mr. HUGHES. What would I have done? I would have protected American lives!

If we start out with a clear program that we are not going to interfere with people's affairs, that they can, as we profess, manage their own affairs so long as they perform their duties to us, and maintain protection of our people in their lives and property, then they do not disrespect us. Every man respects that. No one is contemptuous of you because you protect your own. Every nation understands that. But you can not mingle interference with the affairs of another country and at the same time profess noninterference, and leave your own citizens unprotected, without creating a very bad state of feeling.

We wish well to Mexico. We want her to have a stable government, and build up, and we want to help them. But there, as well as throughout this hemisphere and throughout the world, it must be understood by all—and the path of peace for us is in the way of that understanding—that this Nation, as every other great nation on earth, will protect the lives and the property of its citizens. That is policy that can never be surrendered and maintain the honor of the American name.

AMERICAN PROTECTION.

I desire to see not only the policy of protection—a proper policy for the safeguarding of both our natural and our human resources, not only the policy of safeguarding the rights of American citizens, but I desire to see a reasonable preparedness in this country. I mean military preparedness. I am not militaristic. I do not think there is a corporal's guard in this country for militarism. We are a peaceful people, devoted to the pursuits of peace. We want to go on and achieve our destiny, as I have said, with an enduring prosperity. But we must have, in the opinion of the world, a proper preparation suited to our defense. And I would have our defense adequate for every emergency.

I have the highest honor for our boys who are summoned to do duty in connection with the trouble on the Mexican border. They have responded to the demand with a fine patriotism, and everybody in this country wants to back them up in their patriotic willingness to serve this land. We have got to have more of that high spirit in this country, for it is a case of obligation and not simply one of rights; and I hope the time will come when everybody in this country will feel it an honor to be ready for the service of the country.

But I do think that we ought to have a Regular Army large enough to do police duty, to keep bandits from crossing our border, without calling our men who are citizens in the ordinary pursuits from shops and factories and professions, to do that duty. This country is great enough, without being accused of fostering a militaristic spirit, to have a Regular Army adequate for the ordinary police duties, just as we are not called out of bed in a great city to put out fires or to police the streets.

---

[From the address made by Charles E. Hughes in the Auditorium, Lexington, Ky., Sept. 5.]

It is a rare pleasure to visit this State, and particularly as the spokesman of a reunited party, a party inspired by its highest ideals, reconsecrated to its noblest purposes, the party of Abraham Lincoln, the Kentuckian!

I have spoken that honored name in connection with the party under whose auspices we meet to-day; but I do not forget that that name is cherished by all Americans, irrespective of party. It is no longer simply a party name. It is the name of a great American whose fine nature has satisfied our American ideals and our conception of the demands of American citizenship. I therefore am glad to come to the home of Abraham Lincoln, the peerless American.

What was it perhaps more than anything else that distinguished him and has given him his eminence? It was that he incarnated the spirit of the plain people of this land. Endowed with extraordinary ability, having a remarkable clarity of judgment, wise in policy, far-sighted in statesmanlike vision, he was the interpreter of the heart and the thought of the plain people of America.

No American feels a stranger to him because of his greatness. He is brother to us all. He is kin to the humblest, because he interpreted the spirit of the plain people.

What is that spirit? It is the spirit of reasonableness, it is the spirit of fairness, it is the spirit of generous thought and judgment, it is the spirit which demands the rule of calmness and reason and repudiates the demands of oppression, of tyranny, and of force.

We have a new spirit abroad in these recent days in America. It is the spirit that demands legislation in advance of investigation. It is the spirit that demands executive action and congressional action in advance of an examination of the facts upon which such action should be based. It is the spirit that says, "Legislate now and investigate afterwards!" It is the spirit of force. It is not American.

In the bottom of my soul I desire fair dealing in this country between man and man. There is no one more anxious than I that there shall be equity in connection with all our relations. I want to see our human resources conserved by wise and intelligent action. I want to see every particle of class antagonism vanish in the presence of the application of just principles. I want to see our men knit together in a common fellowship. I want labor to have safe means of work, sanitary conditions of work, wholesome opportunities for recreation, reasonable hours for work, fair wages, provision for old age. I want what is reasonable for labor.

There is one thing that underlies all, and that is that in our efforts to secure what is just that we keep the priceless institutions of this land which distinguish us as a free country and separate us from all the autocracies of the world. It may be very important that here or there there shall be a change in the wage scale. I know not. It is a matter for careful examination. I should be the first to recognize any demand that is just. There is something that precedes any demand, however, and that is the willingness to abide by the results of reason. It is the demand that when we do anything in this country we should understand the way we travel, where we put our foot down, and never surrender to any force of any kind.

It is, as the future will unfold, our priceless heritage that we have a country where intelligence reigns, where there are many opportunities of education, where we are trying to stamp out every abuse working against our institutions. We prize the rule of informed public opinion. We submit ourselves, with respect to our greatest national concerns, to the arbitrament of the public judgment every four years. We submit our arguments; tell what we think and desire to be done. Then we go to the polls and express our convictions, and then every American citizen, whether he is victorious or defeated, goes home satisfied and reason rules. But the day must never come—and I regret to say we have gone very far toward that day—when we shall have any action under pressure instead of on a consideration of the facts.

We can not in this country secure a proper basis for enterprise in the economic change that is about to come to us unless we apply the doctrine of protection to American industries. I speak freely of that doctrine in this home of Henry Clay, the great apostle of the doctrine of protection, he who followed the principles initiated by Alexander Hamilton and laid broadly the foundations of the coming prosperity of the country. It was Abraham Lincoln who said, in 1859, "I was an old Henry Clay tariff Whig. I have not since changed my views." The party of Lincoln is the party of protection, as Lincoln himself was a believer in protection.

Let me read to you what was said by the Republican platform of 1860, upon which Lincoln was elected to office. It reads as follows:

That while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imposts as to encourage the development of the industrial interests of the whole country, and we commend that policy of national exchanges which secures to the workingman liberal wages, to agriculture remunerative prices, to mechanics and employers adequate reward for their skill, labor, and enterprise, and to the Nation commercial prosperity and independence.

That was the platform of Abraham Lincoln. That is the platform of the Republican Party. Nay, more—and I hope I am addressing men here who are not of my political party as well as those who are—that is the American platform on which business must stand in this day if we are going to meet the economic necessities of the coming future!

—

[From the address made by Charles E. Hughes in Cincinnati, Ohio, Sept. 5.]

First, I stand for the application, without abuses, as early and as scientifically as possible, of the doctrine of protection to every legitimate American enterprise; and, second, wherever in this country we can open an avenue to honorable achievement, wherever we can make easier the course of honorable business, I am for that course.

I have stood faithfully for the enforcement of laws in every activity connected with the public business. We have stood for the prevention of abuses, for preventing any man or set of men from taking advantage of the public by any monopolistic practice. We must stop that.

I am also for this—for honest American business, with an open door and no arbitrary, no unjustified restraints. It is time in this country that we took account of stock and endeavored in every way to build up American industry and enterprise.

I want to see our Nation prepared, want to see it in a state of preparedness from every point of view—social, industrial, and military. I think this great Nation should be ready for every emergency. That is not aggression. We have no aggressive policy. We desire nothing but our just rights. We covet nothing to which we are not lawfully entitled. We are a peaceable people, but we are an indomitable people, and the old spirit that got us this Nation and saved it is still in our hearts.

We are all loyal American citizens, of whatever race or creed, and we have but the one country, and we all love it. I am for absolutely safeguarding the rights of our American people on land and sea throughout the world.

I desire to see efficiency in our national life. I want to see every one of our departments handled under the most competent leadership. The time has come, as I have said repeatedly, when we can not be content with easy and indifferent efforts. In the twentieth century we face new conditions, when we must justify ourselves among the nations of the earth by proving the competency of free institutions. I want to see in every department of our Government the very highest standards of administration. I want to see in every bureau the best obtainable men; I want to see Federal bureaus a pattern for State bureaus in those States where the State has a bureau corresponding to that operating in the national field. I want to see all the agencies of our intercourse equipped in such a manner as to protect our interests and American talent.

Go through the land as I have gone through the land in the last few weeks and you will see that we derive strength from every race. We have the strength of a composite people. We draw, and have drawn, the best from every clime. We have a fine patriotic spirit. Now, what we need is to direct that spirit to those demands for intelligent administration along the lines which give us freedom from waste and extravagance; along the lines that will give us a sound businesslike administration. It is not necessary that under free institutions any public business should suffer. And I want to see in our American life those fine ideals carried into achievement. I mean the betterment of human life, the betterment of living conditions.

When I was in New York, in executive office, I did my utmost to secure in our labor laws and otherwise such conditions as would promote these ends. We must remember we are all fellow workers. I deprecate any class antagonism. We may have our differences of view here, but we must have a sense of cooperation, a recognition that we are all working together, and a feeling that our laws are so just and our administration so correct that everybody takes pride in his citizenship and feels that prosperity attained is reasonably diffused.

I am for the just interests of labor. I am for the peaceful settlement of all disputes. I am not for arbitrary action. I am for that which makes up the peace and the prosperity of this great patriotic people.

Your chairman said I was called without seeking the nomination. That is very true. I was contented in my work. I appreciated its importance and desired to remain in it; but there was a summons which could not be responded to save in one way. I responded, in view of the way it came, eagerly and enthusiastically. While I care nothing for the titles of office, I am filled with an intense desire to serve the people of the United States, if they want that service.

**Observations and Facts.**

## EXTENSION OF REMARKS

OF

# HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. HEFLIN. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to submit some observations and facts in reply to a statement recently made and published by Congressman FESS, a Representative from the State of Ohio. Mr. FESS is the publicity chairman of the Republican national congressional committee and is preparing and sending out statements to be used to influence the voter in the coming election.

Mr. FESS comes from Ohio, the home of the loved and lamented McKinley, who did so much to heal the wounds of war and bind the sections together in the bonds of a loyal love.

Mr. FESS is willing to reopen the wounds and destroy the feeling of good will and friendship now existing between the North and the South. He is willing, and those in management with him are willing, to hoist the bloody shirt and appeal to passion and to prejudice in order to obtain votes. They have shown a willingness to disturb the growing friendship between the sections and to injure the country if by doing so the bosses of the Republican Party can again get control of the Government.

Mr. FESS, speaking, I suppose, for the Republican congressional committee on publicity, begins his statement, appealing to sectional prejudice, by saying, in substance, that the Union soldier now sees the entire Government which he saved under full control of the States which attempted to destroy it. Did he know better when he made that statement? Is he ignorant of the facts, or is he willing to make misrepresentations about a situation upon which he is willing to create bitterness and hate between the sections in the hope that he can influence the voter to cast his ballot on considerations of this character?

To appeal to sectional prejudice in our day is a mean and despicable thing. It stamps the man who does it as an unpatriotic citizen and a political renegade.

Mr. FESS in his effort to stir up strife between the North and the South says that "the Government is under full control of the Southern States." If that were true and the Government was being conducted well, should Mr. FESS be permitted to make an issue of it simply because the men in authority and serving their country happen to live in the South?

Does Mr. FESS desire that men trustworthy and well qualified to fill Government positions shall be discriminated against because they live in the South?

Is it good taste in Mr. FESS when he votes for many of the measures advocated by southern men to wait until Congress adjourns to kick when it is too late?

President Wilson's father and mother were both born in Ohio, and while President Wilson was born in Virginia his parents were northern people.

Of the 10 Cabinet members only 3 live in the South.

Of the Supreme Court judges only two of them come from the South.

The Speaker of the House is a westerner, and the Sergeant at Arms is an Ohioan.

While southern men are chairmen of some of the most important committees a majority of every one of those committees comes from the section north of Mason and Dixon's line. In fact, on most of them where the South has the chairman there are 7 members from the Southern States and 12 from the Northern States. So the fact is the northern members on these committees can always out vote the southern members if, according to Mr. FESS's idea, they must be arranged against each other rather than for all to be working for the good of our great reunited country.

The southern Members who are chairmen of House committees were entitled to the promotion received under the seniority rule which has obtained for years and years under Democratic and Republican control, and the fact is the Democrats who became chairmen when we carried the House were given the rank which entitled them to the chairmanships by a Republican speaker who knew at the time he appointed them, ranking Members from the minority, that they would be chairmen of the respective committees if the Democrats should carry the House.

Not only that, but when the Democrats got control they elected the chairmen and all the other members of the House committees. The Ways and Means Committee nominated the members and they were recommended to the House, and the House ratified or rejected the chairmen and the members. The present chairmen of committees who happen to live in the South were elected to the positions they hold. Democrats and Republicans alike voted for them. There was not a dissenting vote; no Republican lifted his voice in protest. They were unanimously elected. Mr. FESS even lost his opportunity to appeal to sectional bitterness, a feeling, thank God, long since dead. Mr. FESS never told the country that the Democratic House elected JOHN KEY, of Ohio, the son of a Union soldier, chairman of the Committee on Pensions. He did not tell the country that we elected Gen. SHERWOOD, of Ohio, a general in the Union Army, chairman of the Committee on Invalid Pensions, and that under this same Southern-controlled House, as he would have the country believe, we have passed the most liberal pension laws ever enacted in behalf of the Union soldier.

He did not say in his statement that we elected a blind Union soldier Chaplain of the Democratic House, and yet every Democrat from the South voted to elect these northern men to the positions that I have mentioned. Ill does it become Prof. FESS to undertake to harrow up sectional feeling now about a condition that he helped to create, or permitted to be created, without one word of protest from him or any other Republican. Verily the Republican Party is hard pressed for an issue.

I appeal to every man who loves his country to rebuke the man and the party that is willing to sacrifice the highest and best interest of the country upon the altar of political greed and desperation.

---

## The Democratic Tariff Law—How It Was Made and What It Did.

### EXTENSION OF REMARKS

OF

### HON. GEORGE M. BOWERS,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. BOWERS. Mr. Speaker, under the leave granted by the House I insert in the RECORD the following statement, written by Hon. James B. Reynolds, former Assistant Secretary of the Treasury and a member of the Tariff Board, entitled:

THE DEMOCRATIC TARIFF LAW—HOW IT WAS MADE AND WHAT IT DID.

The Underwood tariff law was framed upon a theory discredited by public distress and private suffering, whenever, during the last 60 years, any attempt was made to carry it out. Our people can not be placed in direct competition with the peoples of Europe, whose standards of living are much below ours, and still maintain the American standard. Direct competition with Europe, without protection to our industries and labor, means that Americans must reduce their standards of living to nearly those of Europe; and every such reduction is an injury and a privation.

The Ways and Means Committee, which made the bill upon the lines laid down by President Wilson, consulted neither producers nor employer of labor. Few, if any, of the men who framed the law had any personal knowledge of the problems that must be faced and solved by the American producer. They were unacquainted with the conditions and the competition that the farmer and manufacturer must meet and overcome. They could prove a complete alibi if charged with any knowledge of the industrial world anywhere. To them an excursion into the realm of factory and workshop, into the vital problems of production cost and comparative wages of this country and the lands across the seas, into the consideration of the handicaps of the American producer would be but another journey of "Alice in Wonderland."

Nor did the Underwood committee seek knowledge from those who possess the information which they themselves lacked. At the scant hearings that were given upon the subject there was little intelligent effort to get facts. It was a hazing process to any producer who was daring enough to appear and say that he was in favor of protection to American industry. In every possible way the committee members tried to belittle such testimony when given and to make the witnesses uncomfortable. These witnesses were restricted to a bare 15 minutes—with the future of their business at stake—and then even this time was used up in the introduction and discussion of questions entirely foreign to the problems in hand.

The tariff verdict of this committee was accepted meekly and supinely by the Democratic Party. The bill framed in this manner passed both branches of Congress to the crack of the party whip.

The result was natural and inevitable—a tariff law that is faulty in construction, illogical in its development, filled with contradictions and ambiguities, wrong in principle, and vicious in practice.

TARIFF BOARD.

Owing to the enormous diversification of our modern industrial life, the Republican Party has recognized the increasing need of more thorough and scientific methods in the preparation of tariff legislation. The inadequate and hasty consideration of tariff bills offered by the Democrats in the Sixty-second Congress and of the Underwood bill of the next Congress could not have resulted otherwise than detrimental to American agriculture and manufacturing interests.

As pointing a better way, the platform of 1912 indorsed the creation of a tariff board by President Taft, and condemned our opponents for a failure either to provide funds for its continuance or to make some other provision to secure "the information requisite for intelligent legislation." Such a board, free from the pressure of political and other influences, could gather information regarding every industry here and abroad, could tabulate this information and lay it before Congress to form the basis for legislative action.

FROM SPECIFIC TO AD VALOREM DUTIES.

The Democratic Ways and Means Committee set its inexperience and ignorance against the judgment and experience of the expert tariff makers of the world. It substituted, wherever possible, ad valorem duties for specific duties, when it is a well-recognized fact that the more scientific the tariff the more specific duties it contains. Under ad valorem duties the door is always open to frauds and undervaluation. There is, too, a still greater handicap to the American producer in the fact that such duties give him the least protection at a time when he needs it most. A duty that depends upon the value of the goods alone means that in good times, when prices are high, the duty will be high, and in hard times, when prices are low, the duty will be low, and the American market thrown open to a flood of foreign-made goods.

At one time the Democratic Party had a doctrine and a slogan of free raw materials, but out of the Wilson-Underwood school of thought came a new doctrine—that the finished article should be free of duty and the raw materials which go into it, and which must be obtained abroad, should be taxed. This is simply applying to the tariff the operation of burning the candle at both ends.

Calmly standing astride two horses traveling in opposite directions, the Democrats declared that their law would both keep up the prices which the farmer receives and reduce the price which the consumer pays; that the market basket must not be taxed, yet the interests of the farmer must be guarded. They might as well have declared that hereafter all omelets should be made without breaking the eggs, and that anyone failing to accomplish this shall be declared inefficient by that great authority on the subject of inefficiency, Mr. Redfield, Secretary of Commerce, and punished therefor.

A SECTIONAL AND CLASS TARIFF.

The Democratic tariff law is sectional and class legislation. Its two guiding stars were advantage for the South in gratitude for favors received and an appeal to the consumer of the North, hoping for favors to come. If it is not a sectional bill, and so intended, why are the only textiles put upon the free list those that are used by the cotton planter and the cotton-seed oil maker of the land of Dixie? Why is bagging for cotton made free and the same bagging for the products of the North made dutiable? Why is a piece of metal cut to lengths, painted and fitted with buckles, made in the North for baling southern cotton, put on the free list and the same piece of steel, without being manufactured at all, left with a duty? Why is there a grading of the cotton yarns and cloths made in the South, while the woolen yarns and cloths of the North are thrown helter-skelter into one group? Why is the rice of the South dutiable and the fish of the North free? Why is the wool of the North free and the hair of the Angora goat of Texas protected by a duty? Why is the tobacco grower of the South guarded and the northern raiser of farm products left at the mercy of his Canadian rival? There is but one answer. Upon the sea of congressional legislation the Democratic compass points always to the South. It is class legislation, for it discriminates deliberately and directly against one class in the United States, and that class is the producer—the man who labors long and well to make the American product the equal of any in the world.

THE TEST OF THE NEW LAW.

Fortunately for the cause of protection to American industry and unfortunately for the Democratic Party there was a real and accurate test of the new tariff and a comparison with its Republican predecessor before the beginning of hostilities abroad, which has temporarily put an end to normal importations.

The price that the American producer paid for the privilege of living under the new tariff is $1,000,000 a day more of foreign competition for him to face in the market of the United States. According to Government statistics there was an increase in value of foreign goods brought into the United States of $26,000,000 a month, or $1,000,000 a day for every working day of the month.

This foreign merchandise is brought to this country to be sold. By just the amount of the increase in importation will there be a loss of market to the American producer. By just so much will the sale of American goods in the American market fall short of the sales for the same period under the Republican tariff law. An additional competition of $1,000,000 a day faces the American producer so long as the Democratic tariff law remains on the statute book and European conditions are normal. And the loss and the injury that result from this will be felt in the workroom of the mill as well as in the counting room and will reach the northern farmer in his fields.

NO REDUCTION IN COST OF LIVING.

Has there been any reduction in the cost of living to offset this new competition? Have the army of consumers received a benefit in lower prices? Has the man who buys his goods over the counter of the retail store obtained them for less? There has been no such change. The new tariff has produced results only on one side of the ledger. The increased importations under the new law means merely so much yardage cut from the American textile mills, so much tonnage taken from the products of the steel mills, so much less a market for the products of the farm, so much less demand for goods made by the American producer, so much less demand for American labor, with a resultant loss of the purchasing power of the whole citizenship of the United States.

The trade figures of the Government just previous to the breaking out of the European war show also a grievous fact as to our export business. As the result of the new tariff our normal foreign exports not only did not increase, but we were losing part of the trade we already had. For the seven months of the Democratic tariff law, from January 1 to August 1, 1914, the exports from the United States to foreign countries showed a falling off of $127,000,000, an average of $18,000,000 a month, and nearly three-quarters of a million of dollars every working-day of the month, as compared with the same months of 1913 under the Republican tariff law. The very bad feature of these figures is that our export showing was progressively bad under the present law. Beginning with April, the decrease was so great

that the balance of trade ran against the United States and continued to do so until the end of the fiscal year.

FROM A FAVORABLE TO AN ADVERSE BALANCE.

In our foreign trade under the Payne law the favorable balance was over $650,000,000. For the last decade and longer our favorable balance of trade had averaged about $500,000,000 annually. Beginning with April, 1914, this excess of exports was entirely wiped out. In other words, a favorable balance of trade averaging over $500,000,000 annually, and which has enabled us to pay our foreign obligations, which fully equal that amount, was changed to an adverse balance. We saw the effects of this change in our foreign trade by our exports of gold, which amounted to $100,000,000 during that year, and this, be it understood, before the outbreak of the European war.

But the ignorance and incompetence shown by the Democratic Party in its destructive tariff legislation is not its only offense against the prosperity of the people and the welfare of the country. Before it came into power it was exceedingly vociferous in denouncing public expenditures. Since it came into power, its prodigality is monumental. It has wasted, and is wasting, the substance of the people in riotous living. It has appropriated great sums for useless purposes, while denying to legitimate objects adequate support.

ADDITIONAL TAXATION.

And then, finding the Treasury lacking in funds to pay for their extravagance, and being unwilling to deny themselves the unwonted luxury of spending other people's money, and incapable of a scientific adjustment of expenditures to income, they use the strong arm of the war power to levy a war tax when we are at peace with all the world. Hundreds of millions of dollars were wrung from the people in this way, and additional taxes will be added to those already demanded, if the Democratic Party is not deprived of power.

CURRENCY EXPERIMENT.

When none of the promised benefits appeared from the tariff legislation, it was stated at the White House that a new magna charta must be given to our banking and currency system—credit was to be set free from the "shackles which made it the slave of the Money Trust"—and as soon as this great piece of legislation was passed the waters of prosperity were to gush forth as though their source had been smitten with the rod of the prophet. When this vital and intricate subject was taken up for consideration the bankers' associations and the greatest experts on banking and currency in the country exerted themselves to the utmost to secure the inauguration of the best possible system. They thought that the magnitude of the fiscal interests of this country deserved the best possible system, as demonstrated by the banking experience of the nations of the world.

Again the inspired denunciations issued from the White House—the Money Trust, it was said, was in a conspiracy to discredit and thwart the banking inexperience and intuitive expert knowledge of the President and his advisers. Rather than engage in a contest with their own Government, and fearing to add to its hostility against them, the bankers and commercial institutions of the country were compelled to accede to a banking and currency system that does not satisfy.

Already this currency law, announced by Mr. Wilson and his colleagues as wonderful and perfect, has been found to be sadly lacking in essential features. Already Congress is called upon to make amendments to it in order to put it in good working condition.

Mr. Wilson's second cure for the business depression of the country did no good. It could not. What system of currency can be devised that will eliminate the factor of a decreased market for the American producer? How can the establishment of any number of Federal reserve banks prevent additional importations from coming to the United States? What the country needs is more business, not more currency, not more banks. William McKinley well told the story when, in 1896, he said: "Open the mills instead of the mints."

BUSINESS LEGISLATION ALSO A BLUNDER.

Then President Wilson announced that a trio of laws to regulate business would cure the trouble. Apparently he forgot the important fact that legislation alone is not a panacea for lack of success, and that no act of Congress, no policy of the administration, can create character. Thrift can not be secured by law. Property rights can not be disregarded and personal rights remain secure. The persecution of the one at the pesent time means the ultimate violation of the other. Production and transportation can not be arrayed against each other if either is to prosper. The dividend of the employer can not be taken away and the pay envelope of the wage earner remain. Profits and pay rolls are inseparable companions.

In enacting business legislation the Democratic Party was dealing with matters beyond their mental limitations and their experience. In their anxiety to produce more wealth and different distribution, and in their ignorance, they took the risk of killing the goose which lays the golden eggs of prosperity. They were crystallizing into law their limitations and their prejudices. Instead of furnishing safeguards to industry against unfair business methods, they would place shackles upon legitimate business and enterprise.

It is not the capitalist that is most concerned in this legislation. There is the stockholder, the man or woman who owns a comparatively small number of shares of stock of American corporations. In the United States there are 4,000,000 individual holders of corporation securities. The average holding of these securities is about 90 shares. This is the army of men and women whose property is at stake in the new laws, those who have invested their savings, whose small holdings represent the only fruit of hard toil and rigid economy. The new business legislation is filled with radical defects. Its enforcement will mean the punishment of the innocent with the guilty; that is, it has the characteristic Democratic quality of lack of constructive wisdom.

DON'T BLAME IT ON THE WAR.

It is the present hope of Democracy that the European war will so take up and fill the American mind as to distract it entirely from thoughts as to what the party in power has done in its 40 months of rule.

Such a hope is not flattering to the American people. It is not a people which is in the habit of permitting the accident of to-day to offset the premeditated offense of yesterday. The voter of the United States has a habit of remembering, not of forgetting, especially when he has real reason to keep certain facts indelibly in mind. A depleted purse is a great aid to memory. Unfortunately for the Democratic Party, their record was made up before the war began.

Their economic policies had proven wrong, their leadership has blundered and failed, and ignorance and prejudice had already stained their legislation.

PARTISANSHIP AND SPOILS.

The business of the country was injured by Democratic acts. The smooth-flowing current of commerce was checked and the industrial prosperity of the Nation diminished. Their tariff law was a benefit to none but the foreign producer. Their attempt to regulate trade resulted only in hampering it. The record of administration was the rule of partisanship and spoils. There was procrastination instead of action, and violent haste where mature consideration was demanded. No foreign war cloud is dark enough to hide the business depression that Democratic incompetency brought about.

The absolute necessity for the prosperity of the American producer is the control of his home market. Without that mooring place he is the sport of every trade wind that blows. Under the present Democratic tariff law he is losing this home market. That law must be changed if there is to be given to American production the necessary anchor to windward when the foreign trade winds blow wrong and strong.

Another vital condition is that individual effort in the United States shall not be unfairly checked and confined by such hostile legislation as is being enacted by the Democratic Party. If success is to bring with it penalty and punishment, which seems to be the underlying Democratic principle, the American citizen will be so handicapped at home as to be unable to take advantage of opportunity abroad.

The well-being of the country is demanding the restoration to power of the party of construction in place of the party of destruction. There has been more than enough of beautiful theory and glittering platitude. The rule of rhetoric has had its day. There is no longer awe or curiosity about such soulful things as "the new freedom" and "the constitution of peace."

## Coercion Is Un-American.

## EXTENSION OF REMARKS

OF

## HON. PATRICK D. NORTON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. NORTON. Mr. Speaker, under the leave granted to extend my remarks I desire to insert in the RECORD the following address delivered by Hon. Charles E. Hughes, at Lewiston, Me., on September 8, 1916, in which is announced some fundamental American principles of representative government which will be well for all to bear in mind:

COERCION IS UN-AMERICAN—SPEECH OF CHARLES E. HUGHES AT LEWISTON, ME., SEPTEMBER 8.

It is very gratifying to come to this industrial center. So far as I am concerned, there is no interest to which I am more deeply attached than the just interests of labor. As I look into the future, I see no interest that needs more careful attention, more sedulous conservation. We can not survive under free institutions where enterprise is the very life of the community unless we have a sense of fellowship and a pride in workmanship, unless the dignity of labor is universally recognized and it is the aim of the community that the conditions of labor shall be entirely just and wholesome. Those who think that American opportunity means the winning of little citadels of individual success where, remote and secure, one can hold up the public on the highway of traffic and intercourse to exact tolls for individual emolument, without regard to the public advantage, are not Americans and have no proper place in our scheme of life.

PROTECTION OF CHILDREN.

I believe that we must be more solicitous than we have ever been in protecting our human resources. I believe in the principle of protecting children from being too early subjected to the struggle of industrial life. You would sometimes think that the present administration had discovered children and that the first efforts to prevent child labor under improper conditions and at an improper age were made since March 4, 1913. Why, nine years ago in the State of New York I began to present various suggestions and recommendations for the protection of children, and act after act was enacted in that great State, and of course similar action was taken in many other States in the Union for the purpose of preventing the exploitation of children. I do not minimize the importance of the child-labor bill now in Congress. It affects, however, only about 150,000 children. There remain 1,850,000 children yet to be dealt with by proper State legislation. It is a question for all carefully to consider, and, without impairing the credit due to any, let us recognize the fact that the Republican Party for years in many, many States has been in the forefront in this important effort to secure our human resources by protecting child life.

We want the protection of women to secure the future of the race. We want to have labor in every department of activity properly safeguarded. I thoroughly believe in the importance of reasonable hours, in the importance of fair wages and the maintenance of just and decent standards

of living, in opportunity for education and wholesome recreation. I believe in provision for old age. I want to see our workmen throughout this land contented. Of course, we will have subjects to discuss, but I want to see our workmen throughout this land—because the conditions of labor as to safety, as to sanitation, as to wholesomeness, as to hours, as to wages, as to everything that goes to furnish the basis for decent living—satisfied because of the justice of the laws under which they work, the fairness manifested to them by all who employ, the general spirit of the community emphasizing the dignity of labor, and the feeling that we are together in this country trying to work out in a fair way a common destiny, where prosperity will be assured, shared by all, or it will not exist at all.

HIS LABOR RECORD.

As this is a great labor center, and as I believe my labor record has been attacked here, I am going to read what the official organ of organized labor in New York said about my labor record after I left Albany to go to Washington. I read it with great satisfaction. It is complimentary, but it is true. It was written at a time when I supposed and they supposed that I had left forever the political field. It was an outburst of candor, and it may be put alongside those prejudiced and partial outbursts which are now intended to poison the minds of the electorate.

This is what the Legislative News, the official organ of organized labor in New York, said in October, 1910, just after I had resigned the governorship of that State:

Now that Gov. Hughes has retired from politics and ascended to a place on the highest judicial tribunal in the world, the fact can be acknowledged without hurting anybody's political corns that he was the greatest friend of labor laws that ever occupied the governor's chair at Albany. During his two terms he has signed 56 labor laws, including among them the best labor laws ever enacted in this or in any other State. He also urged the enactment of labor laws in his message to the legislature, even going so far as to place the demand for a labor law into his message to an extra session of the legislature. In all, 162 labor laws have been enacted in this State since its erection in 1777. One-third of those exceeding in quality all the others have been enacted during Gov. Hughes's term of three years and nine months.

A FRIEND OF LABOR.

If anybody rises in this country to say I am not a friend of labor, he knows that he is not telling the truth. I simply wish this, however, that in all these matters we should endeavor to be fair-minded.

I do not agree with all that labor proposes. I disagreed when I thought demands were made which were not equitable. I fought, for example, the full-crew bill. It applied generally to all railroads in the State. It was admitted upon the argument before me that in some cases it was not needed and it would require the expenditure of hundreds of thousands of dollars unnecessarily. I said I could not sign a bill like that. We had a public-service commission where complaints could be entertained and orders could be made which were properly adapted to the exigencies to which they relate.

CAN NOT YIELD TO FORCE.

What is wanted in this country is fairness and justice. Nothing else. Therein I speak on behalf of labor as much as on behalf of any portion of our citizenship. I speak on behalf of American institutions themselves when I say that we should never legislate in this country under the demands of pressure and in response to force before we know the equity and justice of what we are doing.

When we have a grievance, the thing to do is to examine the basis of it; examine it fairly, thoroughly, promptly. If anybody says you can not get a fair examination, that person indicts the intelligence and honesty of the American people. Of course we can get a fair examination. Of course we can get a prompt examination. We are the most intelligent people on earth, I submit. Our educational opportunities are unparalleled. Our electorate is alert. Our people are informed by a thousand sources of information. We are constantly busy with public discussion; with reading and study. There is nothing in this country—and that is our security—there is no question that can be raised in this country that can not be settled right if you go at it in the right way.

To say that we must yield to force, is the counsel of despair. We might as well end our form of government if we are to enter upon that path of disaster. It won't do, fellow citizens!

MUST INVESTIGATE BEFORE ACTING.

There has never been, so far as I can recall, a more important issue presented to the American people than that recently presented. I say that when there is an industrial grievance, it should be submitted to the peaceful settlement of examination and decision according to the facts. I say the investigation must precede legislation. We can not have Congress acting on the demand of the Executive before it knows what it is doing and with the whole American people looking on aghast at such an abandonment of Executive prerogative and of congressional duty! I yield to no one in my desire to have these matters settled equitably. The bill to which I have referred carried on its face, in large warning, the declaration of its own defect. It proceeded absolutely to impose a wage scale, and then to direct that somebody find out whether it had any business to do it.

I want to see fair wages and I would be the first to recognize a demand for fair wages; but the principles of American Government underlie every American enterprise, every contract, every opportunity of labor. Why, the laboring man of this country can no more take the chance of surrendering what has been won for public discussion, free government, and against arbitrary force than they can surrender the opportunities of their very existence! Those things are vital to labor, vital to every American citizen. I say let public officers stand like rocks for principles that are fundamental, come what will, and trust to the public judgment of this country to secure it from disaster!

MUST HAVE PROTECTIVE TARIFF.

We want abundant opportunities for work in this country. We can not have them unless we foster American industry. I am glad to stand for the old Republican Party, reunited, reconsecrated, since in this economic era or in this time of economic problems that party has a peculiar right to serve the American people because it carries on its banner the words "Protection to American industry."

If our factories are going to be run full time, or run at all, if new enterprises are to be started, we must have reasonable protection against the lower paid labor of other nations.

The first thing that the workman wants is work. There is no social justice that can be erected on unemployment. There are no opportunities for good wages and good hours in mere agitation without enterprise and industry. You have got to keep your mill open before you can pay anything to anybody. You must have business increase before the opportunities of prosperity can be diffused.

We had a little case a while ago of the application of the doctrine of a tariff for revenue only. It closed shops; it threw hundreds of thousands out of employment. Throughout our land men were walking the streets looking for jobs. Does anybody suppose that the American people have forgotten what happened only a little more than two years ago? Why, the State of Maine is filled with men who know exactly what a tariff for revenue means. And if the State of Maine does not come forward at this time to support the party of protection, the party of prosperity, the party that does not depend upon the European war to help it out, I shall be very much surprised. It is for that reason that we want not only the success of the national ticket, but we want Congress; we want two Senators from this State; we want to secure a representation in the Senate and House that will enable us actually to apply the policies which I believe are essential to the enduring prosperity of this Nation. The time has gone by when we can sit indifferent.

AFTER THE WAR.

The tariff discussion of this day is not like some of the discussions of years ago. This is a very vital discussion. We are going to see nations emerge from this war with a tremendous incentive to pay war bills by production to the extent of their ability. They are going to emerge, despite the horrors and wastes of war, extraordinarily disciplined, extraordinarily efficient, with a wonderful self-knowledge and an extraordinary command of their resources. They are going ahead to produce to the extent of their ability. And America must prepare in peace, by its talent and the wise exercise of governmental power, to protect itself in order that our products may be made according to our wage scale, in deference to our standard of living instead of being flooded by products with which we can not compete because of a lower wage scale and a different standard of living. That is good common sense. And if the time ever was in an American community when an outright free trader or a believer in tariff for revenue only could explain his views plausibly to the American electorate, that time has gone by.

We know in this country from actual experience what we need and we propose that the great producing States of this country shall have a fair show by the application of sound American business principles.

AMERICA ALWAYS FIRST.

I desire furthermore that we shall not only protect the American scale of wages, that we shall not only protect our human resources by wise laws by the reasonable conduct of business, but

I propose that we shall protect the American name and our American honor throughout the world.

We draw our population from every country of the globe. We have here an extraordinary composition. We get the best in many ways of the peoples of the earth, in alertness, in intelligence. Our human material is of an extraordinary quality. That is one reason why we have progressed so rapidly. I take no part whatever with those who would look askance upon persons who have not come over quite as early as some other persons came. But I say this: That the only tonic that can give us power for our great work in this country is the tonic of American sentiment, which pays no regard, so far as love and allegiance are concerned, to any interest on earth other than the one great interest of Americanism, of the prosperity of the American people, of the honor of the American flag, and the protection of American rights.

We have a wonderful spirit of loyalty through the country. I have seen it manifested recently from the Atlantic to the Pacific. We want it directed. We want it emphasized. We must come together in a splendid appreciation of our national aim. We must come together, realizing our varied contribution, but intent upon American solidarity. We must come together in a demand that, while we want peace, we intend to maintain peace. Only an inexcusable blunderer could get us into war. Everybody wants to be friendly with us. But we shall always maintain our known rights with regard to every nation on earth.

It is not a question of whether A or B measures up to all you would desire of manhood. It is a question of American efficiency, priceless in itself; of American rights, priceless in themselves. No nation can maintain prestige and honor and get the driving power of progress from its people unless it is a nation which has an indomitable spirit—the fine spirit that we had in '76 and '61. It is the spirit that is not truculent. It seeks no trouble, it does not try to exploit anybody, it desires peace, it wishes security, but after all it is the American spirit which will not permit the people's rights to be trampled upon or American citizens to be murdered or their property destroyed!

I wish to see an adequate preparedness. I wish to see a consciousness of obligation on the part of all our citizens. I want to see patriotism in the departments of administration quite as much as on the Fourth of July. I want to see efficiency in every department of government. We must cut out all the evil abuses, we must be fearless in the detection of wrong, we must indeed conserve the wholesomeness of our governmental life. But we must foster and encourage every legitimate opportunity for American achievement in this century of economic rivalry. We must plan to go forward and take the lead. America must not be behind any nation on earth in efficiency or anything else.

Let us take a fresh start, having new birth of purpose and courage. Let us go forward with America first and America efficient!

---

## SPEECH

OF

# HON. ATLEE POMERENE,

OF OHIO,

**Before the Democratic State Convention at Columbus, Ohio,**

*Thursday, September 7, 1916.*

GENTLEMEN OF THE CONVENTION: I congratulate the Democracy of Ohio on the record our party has made and is making. The future is big with promise. When we were in session on June 1 our leaders, neither National nor State, had been chosen. Since then the National Democracy in convention assembled at St. Louis, nominated Woodrow Wilson, that chief of American statesmen, and the brilliant Thomas R. Marshall, to head our national ticket, and on August 8 the militant Democracy of Ohio chose for our State leader Hon. James M. Cox, our governor who was and our governor who is to be—the man who makes promises to the people and who redeems them at par. On the ticket with him are such splendid names as Earl D. Bloom, for lieutenant governor; W. D. Fulton, for secretary of state; A. V. Donahey, for auditor of State; Chester E. Bryan, for State treasurer; and Joseph McGhee, for attorney general—all the names of men to conjure with. And your humble servant makes grateful acknowledgment for the nomination to succeed himself in the United States Senate.

Whatever of differences may have existed in our councils, if any, before the primary election, the Democrats of Ohio settled them upon that day, and all loyal Democrats will accept the verdict.

And now, sirs, the party to which we owe allegiance demands that every loyal Democrat shall fall into line behind our leaders, and under their banners march to success.

If one-half the reports which I have heard in Washington within the last two months be true, victory in Ohio and in the Nation is assured. The standard bearer of the Republican Party has been conducting a transcontinental tour. It has created little or no enthusiasm among Republicans. It has filled the hearts of Democrats with joy. The people will not change the realities of Wilson for the prophesies of Hughes. They will not change the constructive program of Democracy because of the carping criticisms of Republicans. In the light of the great accomplishments of the past three and a half years the voters will not displace the presiding genius under whose guidance this work has been done for one who indulges in criticism of details and offers little or nothing affirmative or constructive save and except a return to the discarded protective tariff theories of the past. The provincialism of Republicanism has given way to the cosmopolitanism of Democracy.

There is contentment everywhere in the land except among Republican politicians.

Labor was never more generally employed nor better paid than now. Farmers never received as high prices for their products. Merchants never sold more goods. Manufacturers never had a greater output. Transportation facilities were never put to the test to accommodate the public as now.

It is said that these are war profits. Not so, though no doubt the war has aided in bringing about the present conditions. Munition exports are $480,000,000, or only 1 per cent of our total manufactured products. The war perhaps expedited the return of business activity, but if there had been no war, thrift and prosperity would have been here. Those who are wishing to buy new materials or to increase their stocks find difficulty now in placing their orders. Voters with work and good wages and abundance to eat and wear will not take kindly to changes suggested by the office-seeking class of the Republican Party. The people in the Nation will "let well enough alone."

ACCOMPLISHMENTS OF THE WILSON ADMINISTRATION.

March 4, 1913, ushered in the Democratic administration. Business for several years prior thereto had been unsettled and business men nervous. The Payne-Aldrich tariff law had been drafted at the dictation of the tariff barons of the country. They controlled its making, as they had framed the tariff laws for many years. It was made for the few; the many were to pay the cost. President Taft regarded it as "indefensible." Necessarily, it became the duty of the Democratic administration to reform this tariff. I shall not pause to go into details. Suffice it to say that the Underwood-Simmons bill was written as the first act of the Democratic administration. It is the most equitable tariff law ever placed upon the statute books of the country. It is the first tariff law that took into consideration the consumer as well as the producer. Our Republican friends charge that it disturbed business. My answer is that it no more disturbed business conditions than the writing of any other tariff law, pending its enactment. When its terms became certain, business began to revive.

While in the midst of the work upon this subject the Democratic Party was confronted with the same old lobby, representing selfish interests, at work in the halls of Congress. President Wilson turned the light of publicity upon it and compelled it to leave Washington. The law was passed, and while no one claims perfection for the bill, I do not hesitate to say that if the war had not disturbed the normal conditions of the world's trade we would now be in the midst of a prosperity unparalleled in the history of this country, due to the tariff which we had enacted and to other legislation to which I shall call attention.

It is charged that it did not produce revenue sufficient to meet the expenditures of the Government. The Underwood-Simmons law, in 1914, produced $734,343,700.

The Payne-Aldrich bill, in 1913, produced $724,111,229. In 1912 it produced $691,778,465. In other words, during the first year of the Underwood law $10,000,000 more was produced than during the last year of the Payne-Aldrich bill and $42,565,235 more than during the year 1912 under the Payne-Aldrich bill.

It was estimated that the Underwood bill would produce from custom receipts alone only $270,000,000. As a matter of fact, it produced, in 1914, $292,128,527, while the Payne-Aldrich bill, in 1912, produced $311,321,672, and during the year 1913 $318,891,395.

The tariff is no longer a scarecrow with which to frighten people. They have studied and they understand. The old cry that we could not compete with the labor abroad is without substantial foundation. Of course we can not compete in every branch of industry, but it is significant that during the fiscal year ending July 1, 1914, and before the European war began, we sold in the foreign markets American goods manufactured

out of American material by American labor, in competition with the world, ready for use, goods aggregating $942,633,244, or 31.11 per cent of our exports, and we sold partially manufactured goods, to be used in further manufacturing, $374,224,210, or 16.6 per cent of our total exports; and we sold foodstuffs, partly or wholly prepared, amounting to 12.59 per cent. These goods were sold in competition with the labor of Europe and the labor of Asia, and in all parts of the world.

INCOME TAX.

Thanks to the Democratic Party, a graduated income tax law was written into the Tariff Act, and to the extent of the returns therefrom the burden of government was taken off of consumption and placed on the earnings of those who could afford to pay. According to the report of the Commissioner of Internal Revenue, the Government collected $125,000,000 during the last fiscal year from this source.

CURRENCY REFORM.

The Democratic administration found the finances and the credits of this country controlled by a few financiers in the larger cities. They made money scarce or plentiful, as they saw fit. They expanded credit or curtailed it, as it might meet their whims. The money of the country centralized in the great financial institutions of New York and Chicago. Manufacturers and commercial men who desired to expand their business, or to meet their obligations, had no means of knowing to-day what financial conditions might be to-morrow. The farmers of the West could not even move their crops without paying tribute to New York bankers. We had gone through the panics of 1873, 1893, and 1907. They were bankers' panics, pure and simple. To meet this situation, the Democratic administration wrote the Federal reserve act. The management of the system was put into the hands of a board who represented the people of the entire country, and who were not controlled by a few of the large financiers of the country, and since the day that it was put into operation no business man with a legitimate enterprise and good credit and securities need hesitate for lack of money. If his own banker does not have the ready cash in his vaults, he can take his securities to the regional reserve bank, indorse them, and get all the money his community may require. He is no longer at the mercy of a few financiers in New York City, and yet this very system, with rare exceptions, had the opposition of the millionaires of the country who had theretofore controlled the entire credit system of America. Of course they were unwilling to release their grasp upon the resources of the country. They were opposed to the new system—it was made for the benefit of the country at large—it was not made for them. Finally the Government asked Wall Street what it could do. Now Wall Street asks Washington what it may do.

FEDERAL TRADE COMMISSION.

The business of the country had for years been disturbed by unlawful trusts and combinations. Vigorous prosecutions were undertaken by the Government. Legitimate business suffered on the one hand because of the grasping domination of these trusts and monopolies, and they in turn were troubled when a long-suffering public sought through the courts to right the wrongs to which they had been subjected. These two agencies necessarily exerted a disquieting influence over otherwise normal conditions. The present administration has not hesitated to prosecute violations of law wherever willfully committed. But on the other hand it has sought to guide legitimate enterprise in rightful paths, and for this purpose we created the Federal Trade Commission, to which business men can go for counsel and guidance in their own affairs and to lay before the board any complaint they may have to make against competitors who may be engaged in methods of unfair competition. Since the enactment of this law in 1914, 263 cases of unfair competition have been investigated, 144 cases have been adjusted without recourse to the courts, and 119 are pending.

TARIFF COMMISSION.

We have provided a tariff commission and clothed it with power to investigate the administration and fiscal effects of the customs laws of this country now in force or which may be hereafter enacted; the relations between the rates of duty on raw materials and finished or partly finished products; the effects of ad valorem and specific duties; and, in general, to investigate the operation of customs laws, including their relation to the Federal revenues, and for the purpose of securing reliable information for the guidance of Congress. Its powers are plenary; it is authorized to investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, the effect of export bounties and preferential transportation rates, the volume of importations compared with domestic production and consumption, and all conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production.

MERCHANT MARINE.

Prior to the Civil War we had a merchant marine which was the Nation's pride and the envy of the world. In 1846, it brought to our shores 87.1 per cent of our imports and carried abroad 76.1 per cent of our exports.

In 1863 it carried only 63 per cent of our imports and 69.7 per cent of our exports.

During the Civil War 100 of our vessels were destroyed by Confederate cruisers and 700 were sold to Great Britain.

In 1870 American bottoms carried only 33.1 per cent of our imports and 37.1 per cent of our exports.

In 1910 it carried 10 per cent of our imports and 7.5 per cent of our exports.

In 1913 11.4 per cent of our imports and 9.17 per cent of our exports.

And now, after the lapse of 50 years since the Civil War ended, the American flag is seldom seen in any foreign port. In the two years prior to the European war ocean rates had increased from 50 to 100 per cent, and since the war the charges have advanced from 1,100 to 1,200 per cent, and even more.

And now, this year found us with a foreign commerce of $6,500,000,000. Perhaps not more than 10 per cent of it was carried in American bottoms and we were at the mercy of the foreign shipowners. We have been likened unto a great department store that is dependent upon its competitor for a delivery system. We will be at a disadvantage in our efforts to get our portion of the world's trade so long as this condition prevails. The Democratic Party has sought to remedy this situation for the benefit of our commerce. Private capital for 50 years has insisted upon subsidy before it would undertake the enterprise, and it is contended on behalf of the shipping interests that with reasonable subsidy our merchant marine will be restored. After having failed for 50 years to carry our merchandise to the markets of the world and permitted our merchant marine to become a memory, the Democratic administration saw fit to embark upon a new policy; namely, to appropriate $50,000,000 with which to buy or build ships so that we might not be wholly dependent upon foreign shipping interests. It will be the nucleus about which will be builded a merchant marine worthy of our former pride. This program was opposed by the Republicans because it interfered with the private enterprise which had done nothing for our relief. My answer to them is that if subsidy be a good thing for the few stockholders of a privately owned shipping company, a little more subsidy in the form of subscription to the capital stock of a corporation which is owned by a hundred millions of people will be a good thing for them.

It is usually said in support of ship subsidy that we would be placed in competition with the subsidized merchant marine of the maritime powers of the world. Only 5 per cent of the British and German-owned vessels are subsidized. They are the fastest vessels, but if 95 per cent of the British vessels can do business without subsidy as against the other 5 per cent that are subsidized, it must follow that subsidy is not the all-essential to success.

I would rather vote the people's money to buy ships to be owned by the people than to vote subsidy for the benefit of private-owned ships.

LEGISLATION FOR THE FARMER.

The greatest enterprise of the country is our farming industry. Our farms are almost of unlimited extent and surpassing fertility, but with all of this natural wealth the development of agriculture has not kept apace with the increase of our population; and while we produce in meats, breadstuffs, and many vegetables more than we now consume, if our population continues to increase as it has in the past, the crying need of the near future will be our food supply. Little or no thought in the past administrations has been given to the needs of the farmer. The Republican Party favored the manufacturer with high tariffs and made the farmer buy in a protected market and sell his supplies in competition with the products of the world. It favored the commercial man with the organization of national banks suited to his wants. It permitted the financiers to control the credits and finances of the country, but little or no attention was given to the financing of the farmer. Necessarily his needs differ from those of the ordinary business man. When he buys his farm, improves it, or stocks it, he is obliged to have financial assistance on different terms than the merchant or manu-

facturer. His crop for one or more seasons may be a total failure. If he fails to meet his interest or the season has not been good, the banker who has made him a loan on short-time notes becomes uneasy and demands his money.

It was the Democratic administration that favored and put through the farm-loan act, under which the farm-loan banks are now being organized throughout the country, and we shall have in the future what we have not had during the long reign of Republicanism—long-time loans extending from 5 to 40 years, not exceeding 6 per cent, for the benefit of the agricultural interests of this country. This system is no longer an experiment; it has been tried for many years in the countries of Europe and South America, and, with rare exceptions, has proven a success wherever it has been adopted. Before it took its final shape it had been the subject of study and investigation by two commissions—the American Commission, consisting of two members from each State, and the United States Commission, consisting of seven members appointed by the President—and also by a joint committee of the Senate and House of Representatives; and after long, exhaustive debate it was adopted in the Senate with only 5 dissenting votes, all Republicans, and in the House with only 10 dissenting votes, all Republicans. And yet this measure received the condemnation of the Republican national convention. It is significant that three of the members of the resolutions committee of that convention were three of the five dissenting votes cast in the Senate against the measure. It is claimed by some of its critics who attempted to block its passage through Congress that it is only an experiment; and so it is, so far as this country is concerned, and any other form of rural credits would be an innovation here. In answer to such criticism it is sufficient to say that the National Farm Loan Association are under local control, subject to Government supervision, and that the general machinery of the entire system is lodged with the Government, as it ought to be. After private control of the banking system of the country for so many years, with accompanying panics and frequent disturbances of the money market, through which our financiers have always emerged richer than ever before, I am not willing to say that the farm-loan system of the country should be put in jeopardy by allowing it to be manipulated by some past masters of finance who may be quite as much interested in their own bank accounts as they are in the welfare of the farmer. Experience no doubt will suggest changes which will improve the system; and if so, they should be adopted; but now the law has been enacted, and all good citizens will accept it and try to make the system a success instead of attempting to cripple it by slanderous utterances.

But this is not all that has been done by the Democratic administration in the interest of the farmer. We have given Federal aid to the good-roads movement; we have improved the parcel post, passed a warehouse bill, a law for the grading of grain, the agricultural cooperative extension bill, and have given aid to the States in the eradication of the foot-and-mouth disease and hog cholera.

SERVICES FOR LABOR.

We have placed a limitation upon the use and prevention of the abuse of the writ of injunction in labor disputes; we have promoted jury trials in cases of indirect contempt and violation of injunction writs; we provided by law for conciliation, mediation, and voluntary arbitration in labor disputes; we extended the operation of the Bureau of Mines; we have provided compensation for injuries to Government employees; we have given to the Department of Labor the means of getting the job and the man together; we have prohibited child labor in mines and manufactories; we abolished the "gag rule," which had existed under the administrations of Presidents Roosevelt and Taft. On January 25, 1906, President Roosevelt issued the following order:

All officers and employees of the United States of every description serving in or under any of the executive departments or independent Government establishments, and whether so serving in or out of Washington, are hereby forbidden, either directly or indirectly, individually or through associations, to solicit an increase of pay or to influence or attempt to influence in their own interest any other legislation whatever, either before Congress or its committees, or in any way save through the heads of the departments or independent Government establishments in or under which they serve, on penalty of dismissal from the Government service.

President Taft, on November 26, 1909, issued the following order:

It is hereby ordered that no bureau, office, or division chief, or subordinate in any department of the Government, and no officer of the Army or Navy or Marine Corps stationed in Washington, shall apply to either House of Congress, or to any committee of either House of Congress, for legislation or for appropriations or for congressional action of any kind, except with the consent and knowledge of the head of the department; nor shall any such person respond to any request for information from either House of Congress, or any Member of Congress, except through or as authorized by the head of his department.

The Democrats in Congress rescinded this gag rule by the adoption of the following resolution:

The right of persons employed in the civil service of the United States, either individually or collectively, to petition Congress, or any Member thereof, or to furnish information to any House of Congress or to any committee or Member thereof, shall not be denied or interfered with.

The Democratic Congress passed the seamen's bill, abolishing involuntary servitude and improving life-saving appliances at sea.

But the time is too short to continue this schedule of legislative achievement. A great constructive legislative program has been adopted in the Congress during three and one-half years which has never before been equaled by any other administration in the history of the Government.

FOREIGN POLICY.

The great European war broke out August 1, 1914. It was a world crisis. Legislation which had been deemed sufficient in normal times, when commerce was pursuing its usual course, was found insufficient. Our imports, from which we had expected to derive a large portion of the Government's revenue, were suddenly stopped, and from this source alone our income fell off from eight to ten millions of dollars per month. The fiscal legislation which had been deemed sufficient had to be supplemented. Internal-revenue taxes were provided to make up the deficit in our customs duties. It was not additional taxation; it was a substitute for tariff-revenue laws which were inoperative by reason of the European war. Of course our Republican friends find fault with this, but I am sure if they had anticipated the world war they would have been patriotic enough even to advise a Democratic administration that it was coming.

With the falling off of the revenue came also other interferences with trade, now by one belligerent, now by another. Woodrow Wilson is the master hand who has guided the ship of state through the troubled waters of the last two years. He has met the great diplomats of the Old World, armed in the cause of justice and humanity. The more serious of the difficulties have been settled, and his position conceded by them. His pen proved mightier than the European sword. He won his battle without shedding a drop of blood. He has been severely criticized by Candidate Hughes and his chief sword bearer, Theodore Roosevelt. They denounce the President's European policy, but Mr. Hughes does not say what he would have done if he had been in the President's place. If President Wilson has been too drastic or has gone too far, wherein has he thus failed to perform his duty? If he has done some things he ought not to have done, what are they? If he has left undone some things he ought to have done, what are they? Mr. Roosevelt the other day, in his speech at Lewiston, Me., said:

Our first duty is to protect our own rights; our second to stand up for the rights of others. President Wilson has signally failed to perform either duty. They can be performed only by deeds. Words alone are useless.

What are the deeds that Mr. Roosevelt would have performed? President Wilson has gone to the limits of diplomacy both with Germany and Great Britain, and in most instances they have conceded the correctness of his position. In treating with Germany only two other steps could have been taken—one to sever diplomatic relations, the other to declare war. Neither was necessary to preserve the peace and honor of the Nation, but Roosevelt would substitute "deeds" for "words." What deeds, war? Who in this great Nation, except the few who are always thinking of the glory of self rather than the interests of the public, would even think of suggesting war? And if we had declared war where was the navy and the army which would have been sufficient to cope with either Great Britain or Germany? Who is there that would have joined the allies in a war against Germany for the sinking of the *Lusitania* and the *Sussex*, with the consequent destruction of American lives, after she had conceded her wrong and promised indemnity? Who is there who would have declared war against Great Britain and France, though they have interfered with our commerce and our mails and established the infamous blacklist, until all the arts of diplomacy shall have been exhausted? If we had wanted to declare war, would it have been wise to do so in view of our state of unpreparedness after so many years of Republican rule. Surely it is better not to have declared war and suffer to some extent "the present ills than hasten to those we know not of" by going to war with a great power in an unprepared state. How many people are there in the great State of Ohio, appreciating the responsibilities of a President or of a Congress, would even suggest the declaration of war against one of these powers, with all the consequent sorrow and distress which would have followed, unless it became necessary to defend our national honor?

The great American people are not going to displace a man who has accomplished so much for his country in the cause of peace before his task is ended.

MEXICO.

Mr. Hughes, in his speech of acceptance and since, has excoriated the President because of his policy toward Mexico. Of course, we can intervene and take Mexico at any time we see fit so to do, but who asks that this be done? Shall we prove a menace to the weaker Republics to the south of us, whose causes we have always championed? Should we not aid them rather than destroy them? Should we put to the sword a feeble and ignorant people while they are in the throes of revolution because they do not and can not preserve law and order? Are a people morally responsible for the fact that roving brigands steal and kill? Of course there are limitations beyond which they must not go. It is unfortunate that a stable government is not now in control so as to prevent these depredations across our border upon our people who may be sojourning in Mexico and upon their property. But intervention means control by our Government in that country perhaps for years, at an expenditure of hundreds of millions of dollars and the loss of thousands of lives. The choice is not between right and wrong; the choice for us to make is between two evils. What would Candidate Hughes have done? Declare war? In his speech of acceptance, while speaking of the Mexican situation, he said:

It is apparent that we are shockingly unprepared.

Yes; we were unprepared to defend our borders after 16 years of Republican rule. If the Democratic administration is to be held responsible for any part of this state of unpreparedness, to what greater extent will the American people hold the Republican Party guilty after so many years of continuance in public favor?

PREPAREDNESS.

As the situation developed in Mexico, and later in our differences with Europe, it became apparent to the American people as a whole that we had sadly neglected our means of national defense, and it was Woodrow Wilson who had the courage to say to the people that we must be prepared to protect ourselves and our rights on land and on sea against the possible aggressions of the powers of the world. We are not preparing for war; we are preparing for proper and adequate defense. We have not gone to the extent that the militarists of the country would have us go, nor are we going to lag behind as the pacifists would have us do. Mr. Roosevelt, in his speech at Lewiston, said that he favored "obligatory military training." While I believe it would be a good thing for our young men to have some military training, I can not subscribe to compulsory military training. Mr. Hughes, after Mr. Roosevelt had delivered his speech, sent him a congratulatory message and thanked him for his services, and indorsed all that Mr. Roosevelt said. Does this mean that he also approves compulsory military training? Would he fasten upon this country the military system of the Old World? The question of preparedness has only become acute in the last year, and in one year the Democratic Party has done more for the defense of our country than the Republican Party did in 16 years of Republican rule.

I have referred to some of the accomplishments of the present administration. Will Mr. Hughes, if he should be elected, repeal the Federal reserve act? Will he repeal the farm-loan act, which his party in convention condemned, and which the Republican candidate for Senator from this State has assailed? Will he repeal the Clayton antitrust law or the Federal Trade Commission act, or any of the other great pieces of constructive legislation to which I have referred? Will he go back to the Payne-Aldrich tariff bill, or will he adopt it with changes; and if so, what changes? Does he want to restore the finances and credits of this country to the control of the Wall Street millionaires, as in the good old days of reactionary Republicanism? Do the Republicans want to go back to the old order of things, which were repudiated in 1912? Are the people willing to exchange present legislation and present prosperity for the old legislation dictated by an insidious lobby, with its accompanying favoritism to the few and disregard of the many? Will the independent progressive thought of this State and Nation who deserted Taft and followed Roosevelt in 1912 allow itself to be delivered back again to the old party? Did those Progressives stand for principles in 1912 or not? If they stood for principles in 1912, have those principles changed? On the other hand, has the Republican Party under the leadership of Hughes, PENROSE, Barnes, and SMOOT changed its principles? Is it not the same party of special privilege that it was in 1912? If it was in error in that presidential campaign, is it right now? If you Progressives were right then in deserting the old party, are you right now if you go back to the old party? The leopard may change his spots, but the stand-pat Republicans never. There is not a word of progressivism in the Republican platform.

CORRUPT PRACTICES.

There is one other subject on which I desire to speak briefly. It is in the mind of every voter of Ohio. I refer to the lavish expenditure of money in the recent Republican primary. On this subject are we going forward or backward? Shall we pursue a policy that will debauch the electorate or shall we seek to purify it?

CORRUPT-PRACTICES ACT.

A corrupt-practices act can not be made too drastic for me. No one who has kept in touch with the political campaigns of the last generation, if he is honest with himself, will hesitate to admit that the lavish use of money in elections has been most baneful in its influence upon the public mind. I will not consume the time of the convention in trying to define why this is so, or how it is so. Fair-minded men everywhere take it for granted.

I have been honored by my party with a renomination as a candidate for the seat I now have the privilege to occupy. Ohio is generally regarded as a Republican State. We have carried it in four out of the five last campaigns for governor. I feel confident we shall win in the coming election. Everyone who is familiar with Ohio politics believes that in a number of elections to the United States Senate the seat was bought and paid for. The men who participated in these corruptions have for the most part gone to their reward, and I would be glad to draw the veil over the past except for present conditions here and elsewhere. Not that I have a desire to tear open old sores or to point the finger of scorn to acts which have been heretofore committed, but because I hope thereby to challenge the attention of my own State and of the country to these conditions of the past in order that we may ascertain what is our duty now and what shall be our duty in the future.

Under the corrupt-practices act of the State of Ohio (sec. 5175–2), every candidate voted for at any election or primary election held in the State, and every person, committee, or association of persons, incorporated or unincorporated, who have contributed, promised, received or expended, directly or indirectly, any money or thing of value in connection with the election or primary is required within 10 days thereafter to file an itemized statement showing in detail "all the moneys or things of value so contributed, promised, received, or expended, and all the liabilities directly or indirectly incurred in connection with such elections. Under this statute, Myron T. Herrick, the successful Republican nominee at the recent primary filed his statement with the secretary of state showing that he had personally expended in his primary campaign the sum of $22,175, and the so-called "Herrick Voters' League" filed their statement with the secretary of state showing their expenditures in this same behalf aggregating $29,000, or a total of $51,175. I am advised that there were other organizations throughout the different counties in the State who likewise spent considerable sums of money in Mr. Herrick's behalf. It has been estimated, I am informed, that his expenditures in this campaign approximated $150,000 to $200,000, and Republican politicians are quoted as having stated so. Now, I want to be perfectly fair. I am not here to say that any of this money was corruptly expended. I do not know whether it was or not, and so far as this statement is concerned, I am willing to assume that it was not corruptly expended, but I am here to say that the expenditure of this sum of money, or anything similar to it, is altogether vicious in its influence upon the public. I am here to say that when any man has rendered such great service, whether in a public or private capacity, which should so appeal to the public electorate that he should be further honored by his fellow citizens with a seat in the United States Senate, it is not necessary that he expend this vast sum of money in order to show his popularity or the merits of his great service. Think of it! The American people in their wisdom through their Congress have said in their judgment that a salary of $7,500 per year or $45,000 for a term of six years, is a reasonable compensation for services that a Senator is supposed to render to his constituency, and yet we have an example here in Ohio of the spending by Mr. Herrick of more than $50,000—more than the entire salary of an entire term—in order to secure his nomination for this exalted position, to which he has been so spontaneously called by the suffrage of his fellow citizens. And if he is willing to approve the expenditure of this amount of money in order to be successful at a primary election, how much more will he expend in order that he may obtain the coveted honor in the election?

Gentlemen, I had supposed that the day was past in my own State when any man, by the lavish use of money, would seek to secure for himself a seat in the United States Senate. If nominations are to be secured, and thereafter an election, by the reckless expenditure of money, what encouragement will there be for any man of modest means, no matter what his talents or what his merits may be, to aspire to a seat in this body? As for myself, I covet the honor of retiring from the Senate rather than to be elected by the extravagant and lavish use of money. I would not pay $20,000 for a nomination and election to the United States Senate if I could, and I could not if I would. I may be obliged to combat an avalanche of dollars from a big bank account, but the people of Ohio will know it if it is the last thing on earth that I shall tell them. I have no objection to any man being a millionaire, and I have no objection to his multiplying his millions by honorable means, but I do object to his dollars being the stepping-stone into the legislative body which plays so great a part in the governmental operations of this great country of ours.

Among the contributors to the "Herrick Voters' League" fund are many citizens of prominence in Cleveland who rank among the richest men. They are living witnesses to the truth of David Harum's philosophy as embodied in the theory, "Them that's got gits," and some of these contributors, I suspect, are willing to "git" by legislation. It is no compliment to any man to secure a nomination or an election to a high office by the prodigal expenditure of money. It is no compliment to the people of a great State to know that a nomination or an election has thus been attained. It is neither complimentary to the ability nor the standing of any man who thus asserts that he and his friends find it necessary to spend large sums of money to make the people appreciate and understand his ability or position in society, and it is not complimentary to the people to say to them that this money should be spent in order to enlighten them as to their duty. And, more, it is not fair to competitors of equal character and ability to compel them to meet a propaganda which only money without limit can spread throughout the State.

To my very great disappointment, no limitation is placed on the amount which may be expended in the State of Ohio for either a nomination or election or both, to the Senate, unless it is embraced in the provision of the statute limiting the expenses of a Member of Congress to $2,000, and this I doubt. The only limitation to be found anywhere is that contained in the Federal statute which has been so vaguely drawn that it is a question whether or not it will afford any protection against the vicious practices which have grown up throughout the country. And it may be that if one hundred thousand or a million dollars are turned loose in Ohio there is no legal way to prevent it. I went into this matter most thoroughly several years ago when the Stevenson case was up for consideration. To my very great regret investigation revealed that there was no law, common or statutory, State or national, placing a limitation upon the amount that could be expended at that time in the nomination and election of candidates to the United States Senate. The present Federal corrupt-practices act was passed and approved August 19, 1911, three years after the Stevenson election. Whatever may have been thought of its effectiveness at the time it was passed, it is very clear, judging from what has transpired in Ohio, that it places no limitation upon the amount that can be expended in behalf of any candidate, though under the statute itself he can not spend exceeding $10,000; but this does not include any "assessment fee or charge made or levied upon a candidate by the laws of the State in which he resides or for his necessary personal expense incurred for himself alone for traveling and subsistence, stationery and postage, writing and printing (other than in newspapers) and distributing letters, circulars, and postals, and for telegraph and telephone service."

The practice of expending large sums of money in elections is and ought to be condemned by every law-abiding citizen. No man who seeks to win a seat in the Senate, or any legislative body, or to enter other public office by the extravagant use of money will ever have my support whether he is on my ticket or not.

I have already talked longer than I should. The Democratic Party in the State deserves to win, and will win, on the record of its achievements in the past. The Democratic Party of the Nation, under the splendid leadership of Woodrow Wilson, has done more in three and one-half years to correct the wrongs of Republicanism and restore the rule of the people than has ever been accomplished by any other party since the days of Lincoln, in the same length of time. Its constructive policy will be a beacon light in our national life for generations to come. Wilson and Marshall must be reelected. The people of the Nation demand it.

## Analysis of the Farm-Loan Act and Suggestions as to Applying for Loans Thereunder.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM B. OLIVER,
OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. OLIVER. Mr. Speaker, the Federal farm-loan act, popularly called "rural-credits law," was signed by the President and became a law on July 17, 1916. When the bill was signed the President spoke in the following commendatory terms of it:

The farmers, it seems to me, have occupied hitherto a singular position of disadvantage. They have not had the same freedom to get credit on their real assets that others have had who were in manufacturing and commercial enterprises, and while they sustained our life they did not in the same degree with some others share in the benefits of that life. Therefore, this bill, along with the very liberal provisions of the Federal reserve act, puts them upon an equality with all others who have genuine assets and makes the great credit of the country available to them. One can not but feel that this is delayed justice to them, and can not but feel that it is a very gratifying thing to play any part in doing this act of justice. I look forward to the benefits of this bill, not with extravagant expectations, but with confident expectations that it will be of very wide-reaching benefit, and, incidentally, it will be of advantage to the investing community, for I can imagine no more satisfactory and solid investments than this system will afford those who have money to use.

The primary purpose of the act is to promote agricultural prosperity by enabling farmers to borrow money on farm-mortgage security at a reasonable rate of interest and for relatively long periods of time.

The act prohibits the charging of a rate of interest in excess of 6 per cent per annum, and it is confidently hoped that a uniform annual rate of interest will be established not to exceed 5 per cent. The loans, at the option of the borrower, may run from 5 to 40 years and are repayable on the amortization plan, as will fully appear from the tables hereinafter set out.

TWO SYSTEMS PROVIDED.

The act establishes two distinct systems through which loans may be obtained—

First. A system operating through regional land banks.

Second. A system operating through joint-stock banks.

These two systems will be under the general supervision of the Federal Farm Loan Board, composed of the Secretary of the Treasury, as chairman ex officio, and four members appointed by the President. The members of the Farm Loan Board at present are William G. McAdoo (chairman), George W. Norris, Charles E. Lobdell, W. S. A. Smith, Herbert Quick.

This board is authorized to appoint appraisers, examiners, and registrars, who will be public officials. It will also at once divide the continental United States into 12 farm-loan districts, establishing in each of said 12 districts a Federal land bank with a paid-in capital stock of not less than $750,000. Within 30 days after the capital stock is offered for sale it may be purchased at par by anyone. Thereafter all stock remaining unsold shall be purchased by the Secretary of the Treasury for the United States. The Government will not receive any dividends on this stock, but the bill provides how it shall be repaid after the Federal land banks have had the use of these funds for a certain length of time. Ultimately it is intended that all the stock in the banks shall be owned by the associations of borrowers, and provision is made in the law for transferring the original stock at par to such associations.

It is of the utmost importance that farmers should understand the main features of this bill, and the Farm Loan Board in a recent circular letter, hereinafter set out, have urged all farmers desiring loans to organize at once national farm-loan associations, through which applications for loans will be submitted to the Federal land banks. This letter discusses fully the methods of organizing such associations.

Before setting out this letter from the board it may be well to first call attention to some of the provisions of the bill relating to the regional land banks and the loan associations through which they operate, and in this way the suggestions of the board will be better understood. I will later briefly outline the joint-stock bank system, but will take occasion here to say that I think this provision of the bill should have been omitted altogether.

FARM-LOAN ASSOCIATION.

The act provides for the creation of local national farm-loan associations through which it is contemplated that the Federal land banks shall make their loans. In the event that a local loan

association is not formed in any locality within a year the Federal Farm Loan Board may authorize a Federal land bank to make loans on farm land through approved agents. Ten or more persons who own and cultivate farm land qualified as security for a mortgage loan under the act, or who are about to own and cultivate such land, may form such an association, provided the aggregate of the loans desired by the membership is not less than $20,000. Each member must take stock in his association to an amount equivalent to 5 per cent of the amount he wishes to borrow. This stock the association holds in trust as security for the member's individual loan. The association in turn, when applying for money from the bank, must subscribe for stock in the bank to an amount equivalent to 5 per cent of the sum it wants to obtain for its members. This stock is held in trust by the bank as security for the loans it makes through the association. If a prospective borrower has no money with which to pay for his association stock he may borrow the price of that stock as a part of the loan on his farm land.

Under this plan, then, every borrower must be a stockholder in his local association, and every association a stockholder in its district bank.

HOW LOANS ARE OBTAINED.

A member of a national farm loan association, before obtaining a loan, must first fill out an application blank supplied to the loan association by the Federal Farm Loan Board. This application blank and other necessary papers will then be referred to a loan committee of the association, which must appraise the property offered as security. Such application as is approved by the loan committee is then forwarded to the Federal land bank, and must be investigated and reported on by a salaried appraiser of the bank before the loan is granted. This appraiser is required to investigate the solvency and character of the prospective borrower as well as the value of his land. When a loan is granted the amount is forwarded to the borrower through the loan association.

CONDITIONS UNDER WHICH LOANS MAY BE OBTAINED.

The act specifically defines the purposes for which loans may be obtained. These are:

(a) To provide for the purchase of land for agricultural uses.

(b) To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term "equipment" to be defined by the Federal Farm Loan Board.

(c) To provide buildings and for the improvement of farm lands, the term "improvement" to be defined by the Federal Farm Loan Board.

(d) To liquidate indebtedness of the owner of the land mortgaged existing at the time of the organization of the first national farm-loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for one of the purposes mentioned in this section.

Loans may be made only on first mortgages on farm land.

Only those who own and cultivate farm land or are about to own and cultivate such land are entitled to borrow.

No one can borrow save for the purposes stated in the act, and those who, after borrowing, do not use the money for the purposes specified in the mortgage are liable to have their loans reduced or recalled. The secretary-treasurer of each association is required to report any diversion of borrowed money from the purposes stated in the mortgages.

No individual can borrow more than $10,000 or less than $100.

No loan may be made for more than 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanent insured improvements upon it.

The loan must run for not less than 5 and not more than 40 years.

HOW THE INTEREST RATE IS FIXED.

No Federal land bank is permitted to charge more than 6 per cent per annum on its farm-mortgage loans, and in no case shall the interest charged on farm mortgages exceed by more than 1 per cent the rate paid on the last issue of bonds.

For example, if the bank pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes. Out of this margin of not to exceed 1 per cent, together with such amounts as it can earn on its paid-in cash capital, the bank must set aside certain reserves and meet all its expenses.

The act empowers the land bank to borrow money through the sale of its bonds, which bonds are secured by its first-mortgage loans. These bonds are exempt from all taxation and will be as well secured as United States Government bonds. It is believed that they will sell readily under existing conditions at a 4 per cent interest rate. Every effort has been made to make these bonds an attractive investment, so that they will command a very ready sale at low rates of interest, and the success or failure of the system will depend upon the success or failure in securing this result. The act seeks to establish a system through which farmers, with the required security, can borrow money without leaving their own neighborhood, and authorizes all negotiations for loans through officials, who will be their neighbors.

HOW THE SYSTEM TENDS TO PROMOTE A UNIFORM INTEREST RATE.

One of the great advantages to follow from this system will be the tendency toward a uniform low rate of interest in all parts of the Union. It is not claimed that this uniform rate will be realized at the beginning. There can be, however, only one rate for each land-bank district, and since each bank indorses the bonds issued by every other bank, the security for the repayment of all bonds is exactly the same, regardless of the bank district from which issued. In addition to liberal reserve funds, required to be held in liquid assets, the Secretary of the Treasury is authorized to make temporary deposits of public funds to the amount to $6,000,000 in the land banks from time to time. These deposits can be used to meet payments of interest or principal on maturing land bonds. It is difficult to conceive how, surrounded by so many elements of safety, the bonds of any Federal land bank will ever be in default as to principal or interest. When these facts are fully understood by the investing public rates of interest should become stable and uniform in all sections of the United States.

FEES AND COMMISSIONS.

The Federal land banks in making loans are prohibited from charging any fees or commissions not authorized by the Farm Loan Board. The authorized fees will not be collected in advance but may be deducted out of the loan when obtained. These fees should be and, I think, will be very reasonable, and can be reduced from time to time as the business of the banks increase. There is one charge, however, that the Federal Farm Loan Board can not control, and that is the cost incident to securing an abstract of title; this must of necessity be left to the borrower and his attorney.

In this connection it is to be hoped that the legislatures of the several States will speedily adopt some practical and uniform land-title system which will hereafter dispense with the large expense incident in most States to the securing of an abstract. Some of the States have adopted what is commonly known as the "Torrens system" and I cordially commend it to the careful consideration of the lawmaking body of my State.

AN IMPORTANT LETTER FROM THE FEDERAL LOAN BOARD.

Attention has heretofore been called to an important circular letter recently published by the Farm Loan Board, and I trust it will be carefully read and considered by every farmer who may be interested in securing a loan from a Federal land bank. The letter is here given in full:

[Treasury Department, Federal Farm Loan Bureau. Circular No. 2.]

HOW FARMERS MAY FORM A NATIONAL FARM LOAN ASSOCIATION.

WHAT THE FARM-LOAN ACT PROMISES.

Farmers want cheaper money. They ought to have it. The Federal farm-loan act aids them to get it.

The operation of this law is under the control of the Federal Farm Loan Board. The board is the head of the Federal Farm Loan Bureau, which is under the Treasury Department at Washington, D. C.

The Federal farm-loan act provides a way of getting mortgage loans for farmers at low rates of interest at lengths of time to suit the borrower and on easy terms of repayment. All farmers have to do is to form themselves into national farm-loan associations. The Government will do its part in helping them. Farmers can easily form loan associations as prescribed by the new law. Let us see how this may be done.

FARMERS ONLY NEED APPLY.

Ten farmers may unite to form a national farm-loan association. That is the least number the law allows, and farmers only can be members. If more than 10 get together for this purpose, so much the better. But if only 10 farmers are willing to join an organization to borrow on farm mortgage, that number satisfies the law.

Let us suppose these 10 men are farm owners. They may all be close neighbors and know each other well. But they may live some distance from each other, though being in the same community or district or county. In that case they may not know each other so well. But that makes no difference. They all have the same thing in view. They want to borrow money on farm mortgages at 4, 5, or 6 per cent interest. They want the mortgages to run 5, 10, 20, or 40 years, perhaps. They want to pay the mortgage debt off a little at a time. They know this will help them, and so they get together.

CALLING A NEIGHBORHOOD MEETING.

Now, these 10 or more farmers in a community call a meeting. It may be held in a schoolhouse, a hall, a church, or in one of their houses most convenient for them all.

When the farmers have come together they discuss the subject informally and decide to form themselves into an association to borrow money on mortgage. They appoint a committee to draw up articles of association. These articles should set forth the object of the association and the territory within which it proposes to do business. They may follow a prescribed form furnished by the land bank, or they may be modified to suit the needs of any particular body of farmers. But nothing can be included in the articles of association that is contrary to the letter and spirit of the law.

The farmers who thus unite themselves into a national farm-loan association then sign the articles. A copy of them is made to be sent to the Federal land bank of the district within which the association is situated. When the articles of association are received by the land bank they are filed for future reference.

APPRAISING BY A LOAN COMMITTEE.

A loan committee of three members must be appointed to pass on loans. A written report is drawn up by them after they have examined the lands. The committee examines the farms and farm lands for the purpose of appraising their value. The report of this loan committee, signed by all three members, must be sent to the land bank with the articles of association. All three members must sign the report or it will be worthless. The land bank will not consider the request for loans unless all three members sign their report about the value of the farms. Their report should state distinctly that the said committee had examined the lands and appraised their values. The lands and farms should be described, and the value of those upon which the members desire loans should be stated.

It is very important that the loan committee put a just valuation on the lands. Care should be taken not to put the valuation too high nor too low. The former would be rejected by the land bank; the latter might prevent the farmer from getting as high a loan on his farm as he wanted.

Loan committees should remember that their appraisement is only preliminary; it is not binding on the Federal land bank of their district, for later on the land bank will send its own appraiser to fix his values on the same farms. It would be a fine thing for the members of the association if the two independent appraisements of the same farms should come close together. It would prove to the officers of the land bank that they were dealing with an upright, intelligent body of farmers. That would be a moral and intellectual credit to the community. It certainly would help their financial credit. So loan committees should be fair at the beginning. Let them fix just values on the farms of those members who are asking for loans.

The report of the loan committee should also give any other information which would help the land bank to understand conditions in that community.

MAKING AN AFFIDAVIT.

With the list of proposed members, the articles of association, and the report of the loan committee, an affidavit must be made out and sent to the Federal land bank. This affidavit must be signed and acknowledged by the members. It must also be signed and acknowledged by the secretary-treasurer, whose residence and post-office address must also be stated on the affidavit. This affidavit, thus signed and acknowledged by the members and the secretary-treasurer, should set forth that each subscriber is the owner of farm land, or is about to become the owner of a farm. That is, a person in the community may not be in actual possession of a farm, but expects to be in a short time, by purchase, the owner of the particular farm described in his application; in that case he could legally join the association and become a member. The affidavit should also state that the desired loans added together amount to $20,000 or more.

FARMERS ONLY CAN BE MEMBERS.

The national farm-loan associations are to be organized and run by farmers and for farmers. Persons not farmers need not apply for membership; they could not legally be admitted, for the law says that no one except farmers shall be members, and no one except members can borrow. The lowest sum any farmer can borrow is $100; the highest is $10,000. These are the limits fixed by law.

The associations will grow by the admission of new members. After the affidavit, showing that the loans amount to $20,000 or more, has been sent to the land bank and the farm-loan association has become a corporate body through a charter being granted to it by the Federal Farm Loan Board, a farmer who wants to borrow $100 only can be admitted to membership. In fact, there is no limit to the growth of the association after the first 10 or more have become a chartered association. Any farmer may be admitted to membership who wants to borrow on farm mortgage any sum ranging from $100 to $10,000. In this way the national farm-loan associations will grow in numbers.

FARMERS AS SHAREHOLDERS.

But farmers can not join without buying shares in their association. The value of the shares is fixed at the low price of $5 each. Every farmer who becomes a member of a national farm-loan association also becomes a borrower and a shareholder at the same time, for the law says that he must subscribe for stock to the amount of 5 per cent of his desired loan. If he wants to borrow $100, he must take 1 share of stock; if $200, 2 shares; if $1,000, 10 shares; and if $10,000, 100 shares.

The borrower may pay in cash for his stock at the time he applies for membership, or he may wait until his loan is received and then pay for his stock from the loan. He may, if he wishes, even add the cost of his stock to the amount of his loan, providing this does not increase his loan above 50 per cent of the appraised value of the land and 20 per cent of the permanent improvements thereon. But the owner must keep the buildings insured.

This plan of buying stock makes the national farm-loan associations cooperative in character. When the farmer borrows money, the shares of stock he has to buy are held by the association as part security for his loan. But if the association prospers, dividends on his stock must be paid to the owner. When his debt is paid off, the stock owned by the borrower is canceled; that is, if a farmer has held two shares of stock he is paid $10, the stock is canceled, and the farmer is no longer a member of the association. The payment of a debt automatically removes a farmer from membership in a national farm-loan association.

Each farmer is liable for the debts of his association to twice the par value of the stock he owns. One-half of this liability has already been paid as represented by his shares of stock held by the association, so that in case of the failure of an association a member who held one share would be liable for only $5 more. Thus the members take little risk and reap all the benefits of cooperative mortgage credit.

THE ASSOCIATIONS AS SHAREHOLDERS.

The money the farmers pay their association for stock is turned over to the Federal land bank to buy stock in that bank for the association. The cash may or may not be sent in with the subscription for stock. If cash is sent, the secretary-treasurer of the association must procure it from the prospective borrowers. Each farmer pays his share according to the amount of his loan. For example, if one member wants to borrow $500 and another wants to borrow $1,000, the first one has to pay $25 and the second one $50. The subscription price of $1,000 for the land-bank stock is provided in this way.

If for any reason, however, any or all of the loans should not be granted by the land bank, the money paid in advance on account of stock subscriptions would be refunded, but the cash need not be sent in advance with the subscription made by the secretary-treasurer. When the loans are granted by the land bank, the amount of the subscription to the stock may be deducted from the total amount of the loans. In such case the balance is forwarded to the secretary-treasurer of the association; that is, if the loans total $20,000 the secretary-treasurer would receive $19,000. He would then pay over to the farmer who asked for a $500 loan the sum of $475, and to him who wanted $1,000 the sum of $950. That is to say, 5 per cent of each farmer's loan would be deducted to help pay for the association's subscription for stock of the land bank; but if the stock subscription of 5 per cent is raised in cash the whole amount of the loans would be remitted.

Now, let the farmer members understand this, that the associations and not they are the owners of the stock in the Federal land bank, and this plan is adopted that the associations may ultimately become the sole owners of the Federal land banks. This stock is held by the land bank as part security for the loans granted to the association. This plan makes the borrowers indirectly part owners of the land banks with the Government from the beginning, and through these cooperative organizations provides the method whereby they ultimately become the exclusive owners.

The profits of the land banks go to the associations. The stock held by the Government draws no dividends, but earnings will be divided on the stock owned by the associations. Thus all profits of the land banks, after the Government has withdrawn its holdings of stock, will go to the associations, who will ultimately become the owners of all the Federal land banks in the United States. The law provides for the gradual withdrawal of Government holdings in the land banks, leaving the whole field open to the farmers themselves through their national farm-loan associations. The importance of organizing these associations of borrowers, therefore, can not be unduly emphasized.

ELECTION OF OFFICERS.

When the application for the charter is sent to the land bank, it must state that a temporary organization has been formed. This temporary organization elects a board of directors, a loan committee, and a secretary-treasurer. The board of directors must consist of not less than five members; the loan committee must consist of three members. The board of directors elects a president, vice president, loan committee, and secretary-treasurer. The last-named officer need not be a member of the association or resident of the district, but the others must be members and residents. The secretary-treasurer receives a small salary, which is fixed by the board of directors. All other officers are supposed to serve without pay, unless the payment of salaries is approved by the Federal Farm Loan Board.

HOW LOANS MAY BE USED.

If a farmer has a mortgage on his farm and borrows money from the land bank, his mortgage lien must be the first thing paid off with the money. If any surplus of his loan remains, he can apply it for the purchase of fertilizers or live stock, the construction of a silo, the building of a barn, the erection of poultry houses, or for any other purpose which will improve the farm's value.

But, if a farmer has no mortgage on his farm and desires to borrow for improving it in any of the ways mentioned above, he can borrow money from the land bank by giving a first mortgage on his farm.

THE FARMER HAS LITTLE TO DO.

The practical work of a national farm loan association is done by the secretary-treasurer. He writes and answers letters, keeps the books, handles the funds, secures the loans from the land banks, pays over the money to borrowers, and does all the active work of the association for the members.

The loans are made on first mortgages on farm lands. The mortgages may run not less than 5 years nor more than 40 years. The borrower himself decides the length of time his loan shall run. The interest can not exceed 6 per cent and may be lower. Every six months, or once each year, the farmer pays the installment on his debt. This includes interest, part of the debt itself, and a small amount to cover expenses of the association. The secretary-treasurer makes the collections, gives his receipt for them, and sends the money collected to the Federal land bank. Thus most of the work of the associations is done by this officer. That is why he is allowed a small salary.

The Federal land bank which receives the application for loans and other papers from the association then sends an appraiser to examine the land and the financial condition of the proposed borrowers. If these conditions are found satisfactory, the land bank forwards the papers to the Federal Farm Loan Board with their recommendation. On approval by the Federal Farm Loan Board, a charter is granted to the applicants to do business in their district, the charter being forwarded to the association by the Federal land bank.

When the charter has been granted, the association can borrow money of the land bank. The mortgages are then prepared and delivered to the secretary-treasurer, who forwards them to the Federal land bank of the district. On its part, the land bank sends the money for the loans to the secretary-treasurer of the association. He in turn delivers the proper amount of money to the respective borrowers and the farm mortgage transaction is closed. The farmer has thus been enabled to borrow money on first mortgage with practically no trouble or expense on his part.

BENEFITS TO FARMERS.

In this way the farmers themselves become the owners and directors of the national farm loan associations. They become investors as well as borrowers. The Government has not only made the way easy, but it helps the farmers to reap the benefits of the profits derived from their own united efforts of borrowing.

But more than this. By becoming subscribers to the capital stock of the Federal land bank of their district, which the associations have to do when applications for loans are made, the farmer members of the national farm loan associations will ultimately become the owners of the land banks also, for the Government will gradually withdraw its stock holdings from the Federal land banks and leave their ownership with all their profits entirely in the hands of the farmers themselves.

Here, then, is a great opportunity open to all farm owners in the United States. The power lies within their hands to extend the benefits of this system into every rural community at practically no loss of time and at little expense. There is no reason why a national farm-loan association should not be established in every rural district. The Government has placed its money and its moral support at the command of our farmers. But they must get behind this system and

take advantage of it if they would reap all its benefits. The Federal farm mortgage credit system thus becomes a field of unlimited promise to American agriculture.

FARMERS MAY ORGANIZE AT ONCE.

Let it be plainly understood that farmers can form their preliminary organizations at once. They can have their directors chosen, as well as their president, vice president, loan committee, and secretary-treasurer. But they can not receive their charter, nor can they borrow money of the land banks until these have been located and organized. This may take several months.

But, if the farmers have all the preliminary work done ahead, they can make their applications to the land bank as soon as it is organized. This will help them to get their loans quicker than if they put off organizing until the land banks are located. Let 10 or more farmers in every community go ahead at once and form a temporary organization. It will help them and it will facilitate the work of organization.

ALL LOANS TO BE REPAID ON AMORTIZATION PLAN.

The term "amortization" means a method of paying a debt by creating a sinking fund, which at the close of the agreed period will extinguish both principal and interest. Under this plan the annual payments will be for the same amount, and the last payment will discharge the debt in full. To one unfamiliar with the advantages of this plan it is surprising how fast small savings will grow when faithfully extended over a long period of years.

For example, if a man should borrow $1,000 at 5 per cent interest, the annual interest charge would be $50. If the borrower pays only $50 per year he can never discharge his obligation, but will always owe the full sum of $1,000. If, however, under the amortization plan provided for in this bill, he will pay $60 per year, which is only $10 more than the annual interest charge, his debt will be fully paid at the close of 36 years. He has thus actually paid off his obligation of $1,000 with $360, if you compute simple interest at the rate of 5 per cent.

The borrower will determine the period of time for the loan to run, within the limits of 5 and 40 years, but the interest rate can not exceed at any time 6 per cent per annum. The longer the period of the loan the smaller will be the annual installment payment required to discharge in full the principal and interest.

For example, if two neighbors conclude to borrow $1,000 each at 5 per cent interest, and agree to pay the debt, one man choosing 20 years and the other 36 years, the man who chose 20 years would be required to pay $80.24 per year, while the one who chose 36 years would pay only $60.40, and the debt of each with these annual payments would be fully paid at the end of their respective loan periods.

Now, to make a further illustration, let us take the case of A, who has real estate valued at $1,800 and improvements thereon valued at $500. He desires to secure a loan of 50 per cent of the value of his land, which would be $900, and 20 per cent of the value of the improvements, which would be $100; the total amount of the loan that A can obtain on this security being $1,000, as fixed by the act.

We will assume that he desires this loan for a term of 20 years at 6 per cent interest, and that it is to be repaid on the amortization plan, as required by the rural-credit act. The entire loan, including interest and principal, would then be repaid as follows:

| Annual periods. | Total annual payment. | Interest at 6 per cent. | Paid on principal. | Amount on principal unpaid. |
|---|---|---|---|---|
| 1 | $87.19 | $60.00 | $27.19 | $972.81 |
| 2 | 87.19 | 58.36 | 28.83 | 943.98 |
| 3 | 87.19 | 56.63 | 30.56 | 913.42 |
| 4 | 87.19 | 54.80 | 32.39 | 881.03 |
| 5 | 87.19 | 52.86 | 34.33 | 846.70 |
| 6 | 87.19 | 50.80 | 36.39 | 810.31 |
| 7 | 87.19 | 48.61 | 38.58 | 771.73 |
| 8 | 87.19 | 46.30 | 40.89 | 730.84 |
| 9 | 87.19 | 43.85 | 43.34 | 687.50 |
| 10 | 87.19 | 41.25 | 45.94 | 641.56 |
| 11 | 87.19 | 38.49 | 48.70 | 592.86 |
| 12 | 87.19 | 35.57 | 51.62 | 541.24 |
| 13 | 87.19 | 32.47 | 54.72 | 486.52 |
| 14 | 87.19 | 29.19 | 58.00 | 428.52 |
| 15 | 87.19 | 25.71 | 61.48 | 367.04 |
| 16 | 87.19 | 22.02 | 65.17 | 301.87 |
| 17 | 87.19 | 18.11 | 69.08 | 232.79 |
| 18 | 87.19 | 13.96 | 73.23 | 159.56 |
| 19 | 87.19 | 9.57 | 77.62 | 81.94 |
| 20 | 86.85 | 4.91 | 81.94 | ..... |
| Total | 1,743.46 | 743.46 | 1 000.00 | ..... |

It will be observed from the above table, worked out on the amortization plan, that the amount paid annually by A is $87.19, making a total paid in 20 years of $1,743.46. The capitalization of principal and interest on $1,000 for 20 years at 6 per cent totals $2,200; so it will be seen that on a loan of $1,000, at the same rate of interest, under the amortization plan, there is saved the sum of $456.54 to A.

It is to be hoped that the rate obtainable under the present act will be below 6 per cent; but it can not exceed that amount in any case.

A further calculation has been made, and the table is here inserted, showing a loan of $1,000 for 20 years, at 5 per cent interest, on the amortization plan, to wit:

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.55 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | ..... |
| Total | 1,604.80 | 604.80 | 1,000.00 | ..... |

As hereinbefore pointed out, if the same loan of $1,000 was allowed to run for 30 or 40 years, the annual installment payment would be greatly reduced, but yet sufficient to discharge in full principal and interest at the end of the loan period.

Let the farmer who applies for a loan determine what amount he can reasonably pay each year, and in this way he can fix the term of his loan. Tables showing annual payments required on any size loan, from $100 to $10,000, and for any period of time from 5 to 40 years, will be furnished by the Farm Loan Board on request.

I would advise long-term loans, since the borrower is given the privilege, after five years from date of loan at any interest-paying date, of paying the loan in full or making partial payments thereon of not less than $25.

JOINT STOCK LAND BANKS.

In addition to the system of 12 Federal land banks and the national farm loan associations of borrowers the act permits the establishment of joint-stock land banks and authorizes them to carry on the business of lending directly to borrowers on farm-mortgage security and issuing farm-loan bonds.

These banks must have a capital of not less than $250,000. While under the supervision of the Farm Loan Board, yet they are free from many of the conditions and limitations imposed on the Federal land banks. There are no limitations placed on the amount that can be loaned to a single individual, and no restrictions are placed on the borrowers in the use of the loan funds. The interest rate can not exceed 6 per cent, and the loan must be secured by a first mortgage on land, repayable on the amortization plan. The borrower is not required to subscribe to any stock, nor is he liable for any part of an obligation other than his own. The stock in these banks may be owned by anyone, and, in truth, the borrowers under this system will own none of the stock.

This system, in my opinion, is not only unnecessary, but controverts every sound, well-recognized principle underlying rural credits, and on which the other system proposed in this bill is founded. When the bill was under discussion in the House, I made a motion to strike out section 16, providing for joint-stock banks, and to those interested in the further study of this feature of the bill I will be pleased to send, on request, a copy of my speech in support of the motion to strike out said section 16.

IN CONCLUSION.

The bill we have been discussing is not perfect, and doubtless fails to accord with either your views or mine in all its provisions, but everyone must concede that it marks a long step in the right direction. There were several material and important amendments offered to the bill, which I favored and which were rejected, yet I now wish to repeat what was said by me at that time in a speech on the floor of the House.

Whatever the shortcomings of the bill may prove to be, I hope the great farming interests, whose immediate needs it is designed to serve, will cherish the belief that these shortcomings will be speedily corrected by legislation hereafter. If the Federal Land Bank System herein proposed is to be successful, then this is its message to rural communities: "Whatever you

need, get together; organize yourselves; help to work out this plan if feasible and start it going."

The foundations of this plan are as broad as the country itself. It offers a cooperative plan of combining the forces of the farmers of the entire Nation and of the investment funds of the world for the common purpose of improving our agricultural conditions. It proposes to assemble the collective credit of the borrowing farmers of every section behind the obligation of the individual farmer so as to make his obligation pass current as a "courier without luggage" in the investment markets of the world. If it proves a success there will be a mere minimum of risk, and the farmer will be protected and provided for in one of his now most pressing needs and the investor will be as certain of the payment of his principal and interest as human foresight can make it.

**Address of Homer S. Cummings, Vice Chairman Democratic National Committee.**

## EXTENSION OF REMARKS
OF
# HON. MARTIN D. FOSTER,
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, September 5, 1916.*

Mr. FOSTER. Mr. Speaker, under unanimous consent granted me to extend my remarks in the RECORD I desire to insert a speech made by Hon. Homer S. Cummings, vice chairman of the Democratic national committee, delivered at the State convention held in New Haven, Conn., May 9, 1916.

ADDRESS OF HOMER S. CUMMINGS, OF STAMFORD, CONN., VICE CHAIRMAN DEMOCRATIC NATIONAL COMMITTEE UPON ASSUMING TEMPORARY CHAIRMANSHIP OF DEMOCRATIC STATE CONVENTION HELD AT NEW HAVEN, CONN., MAY 9, 1916.

GENTLEMEN OF THE CONVENTION: We assemble upon the eve of another presidential campaign. Manifestly the hour is a critical one in the affairs of the country and of the world. We have been blessed by an abundance of prosperity hitherto unknown in our history. For nearly two years there has been progressing in the Old World the greatest war known to mankind. All the great nations of the Eastern Hemisphere are involved, the foundations of the Governments of several hundred millions of people are imperiled and, indeed, the destinies of the human race are at stake. How far and into what quarters this conflagration may spread no man is now so wise as to be able to foresee. Great Britain, France, Germany, Austria, Russia, Italy, Turkey, Serbia, Montenegro, Bulgaria, Belgium, Portugal, and Japan are already victims of this unparalleled, international cataclysm, while Roumania, Greece, Holland, Denmark, Switzerland, Norway, and Sweden are armed camps, with all the normal functions of national existence disturbed or suspended, awaiting, with anxious concern, their turn to be summoned.

Our coutry is the one great Nation in the world that has not been drawn into the awful vortex of war. We not only have peace and prosperity, but we have them under circumstances that emphasize their priceless worth and the folly of taking any action that may imperil them. [Applause.] And yet, such are the necessities of partisanship, politicians who place party and not America first are criticizing the administration, maligning the President, slandering our public officials, and hysterically calling for a change of leadership. It is a spectacle as amazing as it is discreditable. It does not require the vision of a seer to know what judgment history will pronounce upon those small-minded critics who, in the period of a great national crisis, placed party above national honor, and with every device known to envy and malice ungenerously sought to add to the burdens that events had placed upon the shoulders of the President of the United States. [Great applause.]

PARTISAN CRITICISM.

A characteristic form of this criticism is found in the address delivered by Senator MCLEAN at the Republican State convention, held at Hartford on the 11th of April. I think that even the most ardent admirers of the eloquent and versatile Senator will not contend that his address was a work of constructive statesmanship. Seizing adroitly upon minor details in the work of the administration he magnified them out of all proportion to their real consequence, overlooked the great achievements of the last three years, and demanded a return of the Republican Party to power without suggesting, throughout his entire address, any definite policy or indicating what alternative course the administration could have pursued which would have more completely accorded with the dignity and the traditions of America. [Applause.]

A criticism which does not offer an improvement is destructive criticism. It is not constructive statesmanship. Generalities will not do and until the critics of the administration offer a bill of particulars and a better program they will receive scant attention in the courts of popular opinion. I think I do the Senator no injustice when I assert that his plea was one of strict and unrelenting partisanship. And I think, also, that the American people are in no mood for that form of statecraft. [Applause.]

REPUBLICAN DIFFICULTIES.

Nevertheless, it is only fair to admit that the task set for the Senator was not without its difficulties.

A "keynote" speech is well nigh an impossibility when the whole party is out of tune. [Laughter.] The Senator did the best he could. He strove to utter a war cry that would be heard from "Hartford to Tokyo," but I fear that he did not quite accomplish this interesting feat as the acoustic properties of the Hartford Armory are notoriously inadequate. [Laughter.] I do not want to be responsible for any ill-timed levity over a subject essentially sad, but the vain attempts of the Republican leaders to unite upon a candidate or a platform produce contortions wonderful to contemplate. [Laughter.]

To whom will the Republican Party turn for leadership? Do our friends desire "something heroic"? If so, the Colonel is ready. [Laughter.] The Republican Party evidently needs some one who can discover an issue, and the Colonel is the greatest discoverer of all time. [Laughter.] He discovered the River of Doubt, and recently, while in the West Indies, he discovered a devil bird with whiskers that emits a peculiar sound and dotes on nuts. [Great laughter.] Why should a man who discovered Cuba, British East Africa, the River of Doubt, the Irish sagas, wild cats, nature fakers, Kettle Hill, civil-service reform, Armageddon, the square deal, social justice, the Ten Commandments, George W. Perkins, and the golden rule be denied a nomination in a Republican convention? [Great laughter and applause.] To be sure the Colonel called the leaders of that party "train robbers and crooks," and I think that he even went so far as to refer to them ungenerously as "second-story men"; but now he is for peace [laughter]—at any price, with or without honor—even if he has to fight for it. [Renewed laughter.] And, after all, why should one not associate with repentant burglars and reformed crooks? To do otherwise is to make mockery of "social justice." [Laughter.] The unforgiving may also recall that he said that the Republican Party was a "rotten husk"—but this was because he took all the ment out himself. [Laughter.] I understand that the "old guard" claims to have the Colonel "buffaloed," but viewing the question fairly it must be admitted that he is "the logical candidate." The Republican platform of Connecticut demands the nomination of a "tried Republican." What Republican, I ask, has been more tried or trying than Emperor Theodorus Africanus the First? [Laughter.] And what Republican has tried more Republicans than the discoverer of the be-whiskered devil bird that dotes on nuts. [Great laughter.] There is a form of justice even in politics, and, if you will permit a sudden shift of metaphor, the Colonel is the hair shirt that the Republican Party must wear in penance for its sins. [Laughter.] And, after all, the Colonel is the only one who offers an understandable criticism of the President's policy. The Colonel wants war, and he is bound to have war. As recently as April 24, he gave forth an interview saying if there is a war "my four sons will go and one and perhaps both of my sons-in-law, the young kinsfolk and friends of my sons will go"; and later on in the same interview he said, "If we now go to war, these young men and all their fellows will die in thousands." This is what I call "something heroic." [Laughter.] The whole family is going to go. [Laughter.] If I were profane, I might say "the whole damn family," and Theodore and his sons are going to die by the thousands. [Great laughter.] The only fly in the ointment is that he intimates that one of his sons-in-law may stay at home. [Laughter.] This would be the act of a mollycoddle. [Laughter.] Can it be that he refers to NICHOLAS LONGWORTH? [Laughter.] If there is to be a war, I want NICHOLAS LONGWORTH to go, too. [Laughter.]

The Colonel's policy reminds me of the inscription that some revolutionary Chinese put upon their banner during the Boxer rebellion. The inscription was "Willing to die." Another band, of a similar kind, seeing the inscription and, not to be outdone, prepared a banner of their own on which they inscribed the thrilling words, "Determined to die," and it is said that a

third band was organized with a banner bearing the motto, "Already dead." [Great laughter.]

THE REPUBLICAN DELEGATION.

Perhaps I can not be expected to sympathize as fully as I ought with the sorrows of the Republican Party. If I had the gifted pen of Charles Hopkins Clark or possessed the velvety and insinuating elegance of diction characteristic of our distinguished Senator, I could depict in appropriate language the moving sorrows of the Republican delegation from Connecticut as it proceeds toward Chicago. [Laughter.]

The Senator in his eloquent "keynote" speech—which somehow seemed a little off key—cries out, "Why should not the corn-fed dove and the carnivorous hawk live together in harmony?" [Laughter.]

The Senator is an authority on migratory birds [laughter], and if he can not answer the question, I do not know anyone who can. [Laughter.] But I timidly suggest that before that fine body of migratory statesmen are permitted to encounter the dangers of the carnivorous birds at Chicago, some appropriate legislation should be passed for their protection. [Laughter.]

Of course, I do not mean to intimate that John T. King or J. Henry Roraback requires protection from any carnivorous hawk. [Great laughter.] Quite the contrary, my friends, quite the contrary. [Renewed laughter.] I am more concerned as to the safety of Charles Hopkins Clark and the other members of the delegation. [Laughter.] What will they do when they get to Chicago to save the Nation from peace and prosperity and Wilson? [Laughter and applause.]

The world is full of perils, especially to the distraught politician. There is no telling what tricks fate may play upon them and they may return from Chicago as enthusiastic patriots supporting Roosevelt and immediate war, or high-minded idealists urging the election of Henry Ford on a platform of universal peace. [Laughter.]

Of course, it is impossible to hazard a conjecture on any basis of reasoning or logic as to the next candidate of the Republican Party or the principles upon which he will be put before the Nation, for that party has neither an available candidate in sight nor any discoverable principles.

However, I hazard the prediction that the nominee will not be Henry Ford. His machine has no self-starter [laughter], and Mr. Ford has exhibited tendencies indicative of so much benevolence and so kindly a feeling for the under dog in the struggle of life that the standpat Republicans would not feel happy in supporting him.

However, I must not worry unduly about the 14 Republican delegates to the Chicago convention, because, after all, they will not have anything to say about who the candidate will be, and so they are spared a good deal of the worry which will have to be borne by Penrose and Barnes and the other elder statesmen of the party. [Laughter and applause.]

REPUBLICAN PRINCIPLES.

The question of Republican principles will also be a source of embarrassment. Some Republicans think the President has gone too fast and others that he has gone too slow. It is going to be difficult to harmonize these divergent views, but the cohesive power of public plunder will work wonders, and the call to the standard of the party will bring many a doubtful patriot into line. When that time comes we shall have no more exhibitions of statesmanship such as those indulged in by our old-time friend Ebenezer. [Laughter.] When the McLemore resolution was before the House and four of the Republican Congressmen from this State voted to support the President, Ebenezer voted the other way. Now, Ebenezer is a great statesman, who knows all about the tariff, and he can rattle the dry bones of a moribund issue even more vigorously than Senator McLEAN himself [laughter], and, in addition to that, Ebenezer has discovered a new method of running for office. The law limits the expenditure of a Congressman to $750 or thereabouts. The statesman from Norwalk devised a plan by which he could run for Congress, get the benefit of an expenditure of nearly $10,000, and avoid unpleasant contact with the public statutes. [Laughter.] This is statesmanship of a high order, and, therefore, it was to be expected that when Ebenezer was called upon to explain why he voted against the President he would give forth a sapient reply. He did. [Laughter.] He said that he had good reasons, but that he would not divulge them to the public for fear of embarrassing his four Republican colleagues who had voted the other way. [Laughter.] That was not only statesmanship, it was self-abnegation amounting, almost, to something heroic.

PEACE AND PROSPERITY.

Of course it is to be expected as the campaign progresses that we shall hear, from time to time, archaic and provincial arguments concerning the tariff. Senator McLEAN pursues this obsolescent method and closes his "keynote" address with an alliterative epigram, as follows, "Preparation and protection will bring peace and prosperity."

This is the summation of his argument. Is it possible that the Senator has been slumbering and that the world has passed and he knew it not? Peace and prosperity are here. [Applause.] They are with us now. It is not a question of how to get them, but how to retain them. [Applause.] The Republican Party, under its present management, is out of touch with events. It seeks to turn back the hands upon the dial of progress and to restore the régime of privilege and graft that America has put behind her forever. [Applause.] It is a party of opposition and not of achievement. If the Democratic Party were in a similar condition of mental collapse and moral bankruptcy with nothing to offer but incoherent words of unpatriotic protest, what would our Republican friends say?

I fear that they would be unkind enough to suggest that we were incapable of managing the complex affairs of government and should not be intrusted with power. [Applause.]

THE UNDERWOOD TARIFF ACT.

Within the limits of this address it is impossible for me to more than touch upon the outstanding accomplishments of the present administration.

In 1908 the Republican Party promised to revise the tariff schedules. Events had made that promise necessary. The dying pledge of President McKinley had to be redeemed. He said, "The day of exclusiveness has passed." The American people were beginning to take a larger view of their economic needs. They had learned that the cry of protection was being used to enable certain favored classes to write schedules so unjust as to be matters of public scandal and which turned the wealth of the people from the many toward the few. After the election of 1908 the managers of the Republican Party proceeded to revise the schedules, not downward, however, in the interest of the people, but upward in the interest of the interests. This breach of faith with the American people brought its inevitable consequences, and in 1912 the Democratic Party was intrusted with power. Our platform promises have been redeemed. What we said we would do we did. [Applause.]

The Underwood Tariff Act, which took the place of the Payne-Aldrich Act, has not deprived the American industries of any proper tariff advantages, but it has deprived the great trusts of an opportunity to continue their plunder of the American people. [Applause.] Indeed, our Republican critics, almost without exception, have abandoned the claim that American industry requires higher schedule rates than those now in force. The chief criticism that Senator McLEAN makes of the Underwood law is that it has not supplied the revenue necessary to run the Government. It is amazing that in the face of the official reports concerning the revenue obtained under the Payne-Aldrich law and the Underwood law such a contention should be made.

Any candid student of the question will easily see that the source of much of the disagreement as to the performances of the two acts grows out of the fact that the critics of the Underwood law intentionally fail to take into account the fact that the provision for an income tax is part of the revenue bill and that it was the purpose of the Underwood law to relieve the people of some of the burden of taxation at the customhouse and to make up the difference in income taxes upon the wealth of America. [Applause.]

The Government reports disclose that all ordinary receipts for the fiscal year 1912 amounted to $691,788,465; for the fiscal year 1913, to $724,111,229; and for the fiscal year 1914, the first year that the Underwood law was on the statute books, to $734,343,700. In other words, the Underwood law in 1914 collected $10,232,471 more revenue than the Payne Act in 1913 and $43,565,235 more than the Payne Act in 1912. [Applause.] Nor is the Senator any more successful in his discussion of trade balances. The favorable balance for the fiscal year ending June 30, 1914, during nine months of which the Underwood law prevailed, was nearly $300,000,000 greater than the corresponding year under the Payne law; and if we select 10 months from the passage of the Underwood law until the breaking out of the war and compare them with a like period following the enactment of the Payne law we find a favorable trade balance of over $150,000,000 greater under the Democratic law than under the Republican law. [Applause.] Our Republican friends, however, tell us that we are now obliged to increase the income tax in what they call "a time of peace." It is unthinkable that an intelligent people will be disturbed by assertions of this character. It is common knowledge that additional appropriations have been made to increase and strengthen various branches of our Government. Republicans and Democrats participated in passing these measures.

Amongst them were the appropriations for the Federal Trade Commission and the Alaskan railway. Moreover, we are upon the eve of expending more money upon our Army and Navy in obtaining a greater degree of preparedness. In the meanwhile the war has interfered with importations, and some means must be taken to supply the taxes for the support of the Government if we are to have the things for which no one clamors more loudly than the leaders of the Republican Party.

It is hypocrisy pushed to the extreme to demand large appropriations for Army and Navy and at the same time criticize the Democratic Party for attempting to pass the laws which are necessary to secure the revenue to carry out these projects. [Applause.] But Senator McLEAN tells us that we must have a Republican tariff, because after the war the goods of Europe will be dumped upon American shores. Here speaks partisanship rather than statesmanship. It is much more likely that after the war comes to an end the United States will be unable to make goods as fast as Europe will take them. After the war Europe will be industrially disorganized. Europe is organized for war and not for the orderly processes of peace. Millions of her strongest citizens are disabled or dead. It is a provincial spirit which inspires the Senator to fear the industrial competition of crippled and depopulated Europe. The real danger is that Europe will not have enough goods to trade for our goods. [Applause.] International trade consists in the exchange of commodities for commodities. Is it possible that Senator McLEAN imagines that international trade can be carried on without an exchange of goods? The supply of gold is limited. Trade that depends upon getting the other man's gold and not his goods would not last very long.

THE TARIFF COMMISSION.

But against even this possibility the statesmanship of President Wilson has protected us.

The President advocates, and Congress will shortly pass, a provision for a nonpartisan tariff commission. [Applause.] The President says:

> A commission such as I have suggested would have nothing to do with theories of policy. They would deal only with the facts of industry and of the conditions of economic change prevailing in the world, so that legislation of every kind that touched these matters might be guided by the circumstances disclosed by its inquiries.

The Stamford Advocate, a Republican paper, commenting upon this attitude on the part of the President, said:

> No honest protectionist asks for more than that the economic facts concerning each item in the tariff schedule should be ascertained by experts and that the rates made in consequence should be guided by the circumstances disclosed by their inquiries.

[Applause.]

There has never been any serious trouble with the "honest protectionist." Our difficulty has been with those selfish citizens who have sought to use the taxing power of the Government to promote their private interests and in return therefor have contributed munificently to the coffers of the political party that has permitted that form of graft and corruption. This is the vicious thing against which the Democratic Party has raised its standard. [Applause.] No "honest protectionist" could ask for a restoration of the Payne-Aldrich bill and no "honest protectionist" can have any concern about the condition or stability of industry when it is to be protected by the non-partisan tariff commission which the President proposes. [Applause.] The purpose of the proposed act is to take the tariff out of the realm of partisan discussion and to reduce its difficulties to mere matters of business.

What "honest protectionist" can fail to support such a policy? What legitimate interest can ask for more? [Applause.]

FEDERAL RESERVE ACT.

The next great achievement of President Wilson was his insistence upon the passage of the Federal reserve act. [Applause.] You will remember that many people wanted Congress to adjourn and not to touch the currency. The President, however, insisted that Congress should not adjourn without completing this great constructive law. It is not disputed that, until the passage of the Federal reserve act, the currency system of the United States was one of the most chaotic and unsatisfactory prevailing in any civilized nation. The passage of the Federal reserve act, if it had been the only thing accomplished by President Wilson, would in itself be sufficient to give him enduring fame. [Applause.] Resisting pressure from all quarters with that patience and courage characteristic of him, he adhered to his purpose. [Applause.]

Now, there is not a disinterested statesman in America, not a responsible banker who is heard to criticize that law. On the contrary, its approval has been almost unanimous. Senator McLEAN suggests that there ought to have been 1 central bank or 5 central banks instead of 12. He forgets that the instincts of the American people are against one great central bank, and the fame of Andrew Jackson rests largely upon the courage with which he met the demands of concentrated capital in the early days of the Republic. [Applause.] We are not, however, concerned with technical criticisms of immaterial details. The Federal reserve act was passed over the organized and systematic opposition of the Republican Party, backed by the Wall Street banks and all their power and supported by a filibuster conducted by Senator Root, the intellectual leader of the Republican Party. And yet, from the moment of its passage, that act has been an unqualified and complete success. [Great applause.]

Two days after Senator McLEAN's speech there was published an official report of the Comptroller of the Currency. This report discloses that the resources of the national banks of the United States on March 7, 1916, amounted to thirteen thousand eight hundred and thirty-two million dollars, exceeding by $307,000,000 the greatest resources ever known in the history of the national banking system, and exceeded by two thousand two hundred and seventy-one million dollars the resources of the national banks as shown by a statement of the year before. It also showed that the aggregate resources of the national banks of the United States exceed by about three thousand million dollars the aggregate resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan.

It also discloses that the increase in deposits in the past 12 months amounted to more than the sum total of all the deposits in all the national banks 20 years ago. These figures show the stupendous resources of this country, its amazing prosperity and the successful mobilization of its finances under the leadership of Woodrow Wilson. [Great applause.]

Until the present administration came to the fullness of its power there has not been any real prosperity in this country since the Republican panic of 1907. And that panic was one of the most inexcusable in our history and was primarily due to the archaic condition of our financial system under Republican rule.

The passage of the Federal reserve act saved this country from an industrial and financial cataclysm.

When the war in Europe began it disturbed the finances of the world. Trade and commerce were impaired, insecure institutions were endangered, and, in many instances, destroyed. This was a world condition.

Every nation of South America suffered from panics, values were destroyed, and bank holidays were a constant necessity. America alone survived the shock and has had the financial ability to loan hundreds of millions of dollars abroad during the war. Such is the financial condition of America, and any critic whose mind is not distorted by partisanship and whose soul is not dwarfed by envy will give full credit to the wise statesmanship of Woodrow Wilson. [Great applause.]

INCOME TAX.

The Democratic Party placed upon the statute books an income tax. The primary purpose contemplated by this legislation was to reduce taxation at the customhouse to make room in our system for a tax on wealth. Taxation at the customhouse is per capita, and the man who toils for his daily bread bears approximately the same burden as the man who counts his wealth in millions. An income tax is based upon the doctrine of "equality of sacrifice," and was necessary to relieve our system from the reproach of being unjustly burdensome to the poor. [Applause.]

The passage of this law was a belated recognition by America of a principle which had found a place in the systems of practically all of the civilized nations of the world. Only reactionaries of the most hopeless character would suggest a repeal of this law, and the Republican Party makes no such demand.

DIRECT ELECTION OF UNITED STATES SENATORS.

It must not be forgotten that it was the Democratic Party which forced the passage of the constitutional amendment providing for the direct election of United States Senators by popular vote. [Applause.] The Nation has accepted this reform gladly and no one is heard to demand a return to the previous and corrupt system by which United States Senators were elected.

THE CLAYTON ACT AND THE FEDERAL TRADE COMMISSION.

A wise and far-sighted administration has also given us two additional measures of reform that have contributed to the safety and security of American business—the Clayton Act and the Federal Trade Commission. [Applause.]

DOLLAR DIPLOMACY AND PAN AMERICANISM.

When the present administration was installed in office it not only inherited from the previous administration a series of distressing complications growing out of the situation in Mexico,

but it also inherited the distrust of the less powerful peoples of this hemisphere and the hatred of the victims of a form of diplomacy known as "dollar diplomacy." The first task of the administration, which it triumphantly accomplished, was to destroy "dollar diplomacy" and to make it apparent to the world that America did not propose to force its financial favors upon reluctant peoples. [Applause.]

Our action during the administration of Mr. Roosevelt with reference to Colombia and Panama, as well as our previous history in the War with Mexico in 1846–48 had made the task of dealing with the South American Republics and extending our trade with them one of exceeding delicacy. Even the most unrelenting critic of Mr. Wilson must admit that under the guidance of the present administration Pan Americanism has become a reality. [Applause.] The very difficulties that we have had with Mexico, including the complications at Vera Cruz, have been taken advantage of to bring about a wider sweep of international friendship on this hemisphere. [Applause.]

MEXICO.

Impulsive and short-sighted critics complain of the policy adopted with reference to Mexico. Admittedly we have been patient, and if patience is a sin, we have sinned; but we are a great and powerful people and we can afford to be patient. Patience in dealing with the turbulent, excitable, ignorant, and partially civilized people of Mexico is not a mark of the weakness and vacillation of our policies, but, on the contrary, is a recognition of the true nobility of that great Republic which, confident in its own strength, seeks to uplift fallen humanity and to implant the aspirations of free government everywhere. [Great applause.]

The firm adherence by President Wilson to this true conception of America has brought into our intimate and friendly counsels the representatives of Argentina and Brazil and Chile. [Applause.] In addition to this, when the question arose as to whether or not Carranza should be recognized, America did not act precipitately nor foolishly nor alone. It acted simultaneously with Argentina, Brazil, Chile, Venezuela, Bolivia, Guatemala, Uruguay, and, indeed, practically all of the substantial governments on this hemisphere.

If the recognition of Carranza was a mistake, then all these other Governments have made the same mistake. [Applause.]

HUERTA.

Some of our critics have suggested that the administration committed an error when it failed to recognize Huerta.

It is amazing that such a suggestion can be made by any responsible person, mindful of the honor and the traditions of America. Recognition is the acknowledgment of an accomplished fact. If at any moment Huerta or his government had in fact ruled Mexico, and had been accepted by its people, the question of recognition might more properly have been raised. There was never such a moment. Huerta came to power at the Mexican capital through the assassination of President Madero and Vice President Suarez. These men he caused to be imprisoned. And when they were at his mercy he connived at their murder. He usurped control of the army, dispersed the congress, imprisoned a large number of its members, defied the courts, trampled upon the constitution, intrigued with foreign nations, and then had the audacity to stretch out his bloody hands to the President of the United States for the friendly handclasp of recognition. [Great applause.]

No government founded upon assassination can endure. What excuse could the President have offered to the conscience of the world if he had made friends with this political monster? What extenuation could there have been for such a betrayal of the principles of human liberty? [Applause.]

INTERVENTION.

There are other critics who contend that the President should have intervened in Mexico. Intervention means war. It means a long, tedious, exasperating, and bloody war. It means the sacrifice of millions of treasure and thousands of American lives.

It would imperil our friendly relations with the South and Central American Republics. It would distract and divert the energies of our country at a moment when other and more important questions confront us. Manifestly, therefore, intervention is a last resort.

Intervention in Mexico is not a new question. The first great Republican President, Abraham Lincoln, had the same matter under advisement. If you will read the communication written by William H. Seward, Secretary of State, on April 6, 1861, giving President Lincoln's views on intervention, you will find that the spirit pervading the document and the sentiments expressed by Abraham Lincoln at that time are identical with the spirit and sentiments of Woodrow Wilson. [Applause.]

Let me read from this historic document:

For a few years past the condition of Mexico has been so unsettled as to raise the question on both sides of the Atlantic whether the time has not come when some foreign power ought, in the general interest of society, to intervene. You will not fail to assure the Government of Mexico that the President neither has nor can ever have any sympathy with such designs in whatever quarter they may arise. The President never for a moment doubts that the republican system is to pass safely through all ordeals and prove a permanent success in our own country and so to be recommended to adoption by all other nations. The President is hopeful of the ultimate triumph of this system over all obstacles as well in regard to Mexico as in regard to every other American State. I find the archives here full of complaints against the Mexican Government for violation of contracts and spoliation and cruelties practiced against American citizens. It is not the President's intention to send forward such claims at the present moment. He willingly defers the performances of a duty which at any time would seem ungracious until the incoming administration in Mexico shall have had time, if possible, to cement its authority.

[Applause.]

These words of calmness, of forbearance, of justice, of patience set forth the policy of Lincoln. Am I wrong in assuming that they more thoroughly and more honestly reflect the sentiment of America to-day than the whirling and seditious words of Root and Roosevelt and other partisan critics of the present administration. [Great applause.]

And yet, my friends, we may be forced into intervention. There is a limit to the patience and to the endurance even of that great man in the White House. There are powerful and corrupt and wicked forces at work in this Republic, employing all the weapons of malice and slander to precipitate a crisis with Mexico. Have not the thoughtful, fair-minded men of America, who owe and acknowledge a higher duty to their country than to their party, the generosity, the courage, the patriotism, and the intelligence to sympathize with the President in his efforts to maintain peace upon a basis consistent with American traditions?

The policy of the President with respect of Mexico has already brought to our side the moral and intellectual forces of this hemisphere. Both North and South America are a unit in their efforts to prevent the great flame of war from leaping across the sea. Already we have had encouraging assurances of cooperation and support from the nations of South America that appreciate the rectitude of our purposes and the value of our friendship. I say that to impede the President, to embarrass him, to render his work more difficult, to haggle over nonessentials, is to miss the greatest opportunity that has come to American citizens in a generation—the opportunity to lift America into the undisputed moral leadership of the world. [Loud applause.]

PREPAREDNESS.

At such a time it is discouraging to find a man of Senator McLEAN's intellectual ability using such meaningless words as these:

The great war in Europe has been carried on in all its barbarous details precisely as it would have been if the office of President of the United States had been vacant.

What shall we say of such words as these? I hope that it is not unkind to suggest that they are the result of cerebral flickerings which do not quite amount to mental processes. They are characteristic of the efforts of a bewildered partisan who is striving to square his political prejudices with his patriotic duty. Nor can the Senator be regarded as either fair or helpful when he says:

Our Army is equipped with machine guns that will not shoot at night and aeroplanes that will not fly by day. Our soldiers faint if called upon to march more than 10 miles a day.

I assume that if this means anything at all it is intended as a criticism of the Democratic management of the Army. Under such circumstances it may not be ungracious to point out that President Roosevelt reduced the enlisted strength during his term of office. Mr. Roosevelt became President on September 14, 1901. On the 31st day of May, 1902, the Secretary of War, Mr. Root, by direction of the President, Mr. Roosevelt, issued an order reducing the enlisted strength of the Cavalry from 15,840 to 14,040, of the Artillery from 18,862 to 17,742, and of the Infantry from 38,520 to 29,880, or a total reduction in the enlisted strength of the United States Army of 11,560.

Nor is the Republican record with reference to the Navy any better. In 1906 President Roosevelt declared, in a message to Congress, that the Navy should not be enlarged, that it was adequate for our national purposes, and if existing warships were replaced as they were abandoned all our needs would be met. The Wilson administration authorized in two years $70,000,000 to be spent on the chief fighting forces of the Navy as against $26,000,000 authorized during the last two years of the Taft administration. [Applause.] The five dreadnaughts authorized under President Wilson will mount 36 more 14-inch guns than the two authorized by Mr. Taft. During the four

years of Mr. Meyer's service as Secretary of the Navy he obtained six battleships. In the first two years of the Wilson administration five battleships were authorized—before the European war began. [Applause.] Our enlistments in the Navy have increased over 6,000 under the present administration. A Navy Consulting Board, headed by Thomas A. Edison as its chairman [applause], and 22 members selected from the 11 leading engineering and scientific societies has been established, and the talents and patriotism of these men are now at the service of the country. [Applause.] And if one cares to survey our history he will learn that Grover Cleveland and William C. Whitney started our Navy toward whatever ascendency it enjoys to-day, and Samuel J. Tilden was the father of our present system of coast defense. [Loud and long continued applause.]

But, my friends, I do not blame the Republican Party for not building up a great Army and Navy. The people would not have tolerated it and no statesman foresaw the present situation. But to charge the Democratic administration with responsibility for the inadequate means left us by the Republican Party is injustice of the grossest character. [Applause.]

Upon the issue of preparedness there is no mistaking the attitude or purposes of the President.

"How can Americans differ about the safety of America?" is the question that he submits to his fellow countrymen.

In January and February he spoke in New York, Pittsburgh, Cleveland, Milwaukee, Chicago, Des Moines, Topeka, Kansas City, and St. Louis, taking counsel with the citizenship of this country concerning the preparedness necessary to the safety of the Republic, discussing with frankness the possible perils of the hour, and seeking support for an adequate policy of naval and military preparation. The response was immediate. The necessary bills will be passed before Congress adjourns. You may debate whether these particular bills go far enough or go too far; but clearly they are measures adopted in response to the sentiment of America and are steps in the right direction. [Applause.]

THE AMERICAN SOLDIER.

I know it is not good form to speak well of our Army or Navy, but at the risk of being regarded as a pacifist and with apologies to Senator McLEAN, who suggests that "Our soldiers faint if called upon to march more than 10 miles a day," I call attention to the recent performances of American troopers in Mexico. [Applause.]

On March 24, with 208 men of the Eleventh Cavalry, Maj. Howze cut loose from all communication. On an issue of five days' rations the column marched in 21 days 571 miles, which is only 100 miles less than the distance from Paris to Berlin.

They marched through a desert which afforded no fodder and only at long intervals water for the horses. There were no roads—only mountain trails. During the entire march they were beyond reach of relief. They fought several engagements, were victorious in all, and lost but one man. [Applause.] With all due respect to Senator McLEAN, I assert that there are no soldiers in the world who could have excelled that feat of that little band of American troopers. [Applause.] That is the spirit of America. That is illustrative of what Americans can do when put to the test. [Applause.]

SUPPORT THE PRESIDENT.

The Senator indulges in a prolonged and inconclusive consideration of the President's foreign policies. At one moment he affects to believe the President infirm of purpose. In the next breath he implies that he may have gone too far, and ends his futile discussion with the lame and impotent conclusion, "I think this is a debatable question."

Again, he says, "What is the sane and patriotic thing to do?" But he supplies no answer to the question.

If the Senator desires to know what patriotic Republicans ought to do, I commend to him the statement made by ex-President Taft on April 21 in an address delivered at Chicago. Mr. Taft discusses the course pursued by President Wilson and says:

> He is right and we all must stand by him. I can not follow the reasoning of those who exalt Americanism and patriotism and do not uphold his hands in the present crisis.

[Applause.]

This was also the attitude of Senator Root on April 25, 1914, when, speaking at a banquet of the American Society of International Law at the Willard Hotel in Washington, he said:

> Thank Heaven we have a President in whose lofty character, in whose sincerity of purpose, in his genuine desire to do what is right, wise, patriotic, and what is best for the country and humanity, we can all trust absolutely. I trust in him. I have differed from him in questions of policy, and doubtless shall differ from him again. Men coming up with different environments and associations and ideas must differ; but I have confidence in the character and purpose of the President of the United States. He is my President, and I will stand behind him in his leadership.

[Applause.]

These are ringing American words, spoken before the political campaign opened and before the exigencies of the Republican Party required the distinguished lawyer to prepare a brief on the other side. [Laughter and applause.]

OUR FOREIGN POLICIES.

The policy of the President is to maintain our national honor and, if possible, to preserve peace. Who will deny that before submitting to the hazards and miseries of war statesmanship requires that the appeal to reason and justice should first be employed and that every resource known to diplomacy should be exhausted? [Applause.] Of course there are irresponsible and excitable critics who complain of the vexation and delay necessarily incident to such negotiations.

Alexander Hamilton and Rufus King criticized the diplomacy of Washington in connection with the Genet controversy. The members of the Cabinet of John Adams criticized his negotiations with France.

John Randolph bitterly attacked Jefferson's foreign policy. Horace Greeley was dissatisfied with the diplomacy of Lincoln, and many men who mistook themselves for statesmen condemned the action of Lincoln in overruling his Secretary of the Navy and even the House of Representatives to maintain peace with Great Britain when the *Trent* affair had stirred the anger of our people. We have had distressing international problems before. In 1793, during the war between England and France, the former seized and held hundreds of vessels floating the American flag. But Washington wrote notes and resorted to diplomacy and saved the Nation from war. In the campaign of 1844 one of the issues was "Fifty-four forty or fight," but we settled the Oregon dispute with England by writing notes and by negotiations.

During the Civil War the dispute with England concerning the *Alabama* and other privateers which had destroyed American commerce disturbed American sentiment, but Lincoln wrote notes and negotiated and saved his country from war. [Applause.]

In 1873 Spain seized the ship *Virginius*, flying the American flag, and shot the captain of the ship, 36 of the crew, and 12 passengers, but President Grant wrote notes and resorted to diplomacy and saved the country from war. [Applause.]

Later in our history there was a controversy with Chile growing out of the shooting of the sailors of the United States battleship *Baltimore*. James G. Blaine, Secretary of State, wrote notes and resorted to diplomacy and saved the country from war. [Applause.]

The bloodthirsty attitude assumed by Mr. Root and Mr. Roosevelt, both of whom, curiously enough, were recipients of the Nobel peace prize, is one of those astonishing revelations indicative of the manner in which men of repute are apt to lose their heads in a national crisis. But the President of the United States has not lost his head [cheers], nor has he lost sight of the true vision of what America means to the world. [Great applause.] It has been his difficult task to maintain in time of war the standards of peace. To preserve peace under such circumstances is a far nobler accomplishment than to lead a nation in war. [Applause.] One can always have war. It should be a last resort. All our great statesmen have warned us against it. The pages of our history are filled with their admonitions. Washington and Jefferson and Franklin and Lincoln and Grant all had a horror of war, but shall anyone say that they lacked courage or that when the time of test came they flinched or failed? [Applause.] The American people have sufficient discernment to distinguish between the spurious patriotism that rushes headlong into controversy and that real patriotism which is not easily provoked to bitterness or violence or reprisal and which for that very fact may be counted upon for all the greater steadfastness in the real hour of national peril. [Applause.]

BELGIUM.

The American people, no matter what their feeling may have been with regard to Belgium, know that the attitude of neutrality assumed by our President was the only correct position that could have been taken. [Applause.] Had a contrary position been assumed the sinking of the *Lusitania*, when it came, would almost inevitably have required us to join the international conflict.

It may be true that some of our citizens would have approved this course and have accepted the results gladly, but they are but a mere fraction of our people.

Mr. Root was United States Senator when the Belgium representatives came to this country, and Senator McLEAN was also in the Senate. I do not recall that either of these statesmen arose to suggest the propriety upon the part of the President

of writing a note of disapproval to Germany. Seven weeks later Mr. Roosevelt, in the Outlook of September 23, 1914, said:

Of course it would have been folly to jump into the gulf ourselves to no good purpose and very probably nothing we could have done would have helped Belgium. Only the clearest and most urgent national duty would ever justify us in deviating from our rule of neutrality and noninterference.

Since that time, my friends, we have heard a deal of nonsense about what the Government ought to have done, but the common sense of American citizenship will appraise these criticisms at their just value.

AMERICAN DIPLOMACY.

Some sensitive and nervous people are alarmed lest we become the laughing stock of Europe. Let them be reassured. The diplomacy of the Old World in the light of the tragic events of the last two years has little to commend it to the free people of this country. It is much more important to know what America thinks of the statesmanship of Europe than what Europe thinks of the statesmanship of America. [Applause.]

The Democratic Party is treading the traditional path of enlightened policy.

Washington, in his Farewell Address, expressed the hope—

That we may never unsheath the sword except in self-defense so long as justice and our essential rights and national respectability can be preserved without it.

[Applause.]

Our President, speaking recently in New York, expressed the same idea when he said:

Americans would not seek a contest or cravenly avoid one. They would fight for the vindication of their honor and character, for liberty, and for free institutions.

[Applause.]

We are a peace-loving people; we are a patient people; we are a powerful people; and let us hope we are a just people. And any nation which has the courage to avoid an unnecessary war will not lack the courage to wage a righteous one. [Applause.]

THE WORLD CONFLICT.

We may not be able to maintain peace. No one can foresee what a day may bring forth. But this we know, up to the present moment our President has kept us out of this world conflict. [Applause.] If trouble comes we are immeasurably better prepared for it than we were a year ago. In the matter of the ability to produce the munitions of war, perhaps the most important thing of all, our situation is vastly more favorable than it was when this war began. If the services of the President have merely delayed the hour of our entry into the conflict, America can never repay the debt it owes him. [Applause.] The President has earned the confidence of his countrymen. Let us continue to trust in him.

Away, I say, with the evil counsels of impatience! We must have the fairness to appreciate that while we negotiate there are millions of our fellow creatures "to whom the war has changed the aspect of the earth and imagery of heaven." The grave heaps and heartbreaks, the utter agony and despair of mankind—surely these things should teach us humanity and forbearance and patience. We must make allowance for these unprecedented conditions and we must not darken that lone light that shines from liberty-loving America upon the troubled and desperate peoples of the earth. [Applause.]

Lincoln would have been moved to a great compassion by a world in such travail. Let us summon to our memory the undying words "with malice toward none, with charity for all, let us strive to do the right as God gives us to see the right." [Applause.]

THOUGHTLESS CRITICISM.

All those who are intrusted with power in a national crisis are violently assailed. Let me read you a quotation recently appearing in the public press:

How much longer is the Nation prepared to drift under the domination of leaders who refuse to lead, who will not act, and who suffer from chronic inability to make up their minds.

That, my friends, sounds familiar, but it is not a criticism of the present administration. It is taken from the London Daily Mail criticizing the Asquith ministry.

History tells us that when Washington decided upon a policy of neutrality between Great Britain and France, when those two countries were at war, he was violently assailed.

Many men of substance thought that we owed a duty to France and that an opportunity had been presented to repay to her, in some measure, the services that she had rendered to us at the time of the Revolution. Others adhered to the cause of Great Britain and maintained that our ties of blood and language should incline us to that side. Feeling became intense and bitter. Valley Forge and Yorktown were forgotten and the effigy of Washington was burned in the public streets of our cities. Our neutrality was violated at home and abroad, political criticism degenerated into sedition, and Washington said he would rather be in his grave than be President of the United States. But he adhered to his purpose, and that sorry page in American history teaches us that Washington was right. [Applause.]

In the period of the Civil War, Lincoln was similarly attacked. Scarcely a week passed that a delegation did not go to Washington to tell him how to run the Government. He was charged with vacillation and inability to make up his mind. He was accused of truckling to Great Britain and was denounced upon the floor of Congress. He was called a clown, a butcher, a hell hound of slavery, a traitor, a despot, a gorilla, a baboon, a fool, an ignorant backwoods lawyer, a scoundrel, and a villain. There were Roosevelts in that time; but Lincoln adhered to his purpose and his calm spirit rests to-day like a benediction upon America.

It is reported that when one delegation came to see the President he replied as follows:

Gentlemen, suppose all the property you were worth was in gold and you had put it in the hands of Blondin to carry across the Niagara River on a rope. Would you shake the cable or keep shouting to him, "Blondin, stand up a little straighter; Blondin, stoop a little lower, go a little faster, lean a little more to the north, lean a little more to the south"? No; you would hold your breath as well as your tongue and keep your hands off until he was safe over. The Government is carrying an enormous weight, untold treasures are in their hands. They are doing the best they can. Do not badger them; keep silence, and we will get you safe across.

[Applause.]

Later in the history of our country President McKinley was the victim of similar vituperation. McKinley was for peace even when the *Maine* lay in ruins, and implored his countrymen not to disturb the orderly processes of diplomacy.

No one who reads the debates in Congress during that period can fail to feel a flush of shame because of the unbridled and malicious criticism to which he was subjected. They called him weak and vacillating and exhausted the vocabulary of vituperation. Evil forces, selfish forces, reckless forces were at work in America then as now, and in the end forced McKinley reluctantly into war.

And now, in the darkest day of the world's history, Wilson stands like a stone wall—resisting these same evil forces. [Cheering and long-continued applause.]

AMERICA'S MISSION.

There is no difficulty about getting into this war. The impulsive statesmen of the hour could have managed it for you long ago. But it has been our hope that America might remain at peace.

We are the only great disengaged Nation on earth. In a certain sense we are the trustees of the moral judgments of the world. Some one must keep undisturbed the great stable foundations of international justice.

America's mission is a mission of humanity and peace. Let us hope that our place in the immediate years to come shall be to bind up the wounds of war, to reestablish the ties of friendship, to re-create and strengthen the bonds of fraternity that ought to unite all humanity everywhere.

And, as the white-hot events of to-day pass into the cool yesterdays of history, it will be recorded that when a crisis came again to America and men were distraught and counsels were confused, an all-wise Providence gave to the Nation another Lincoln, and that amid a world of turbulent spirits and swift and surpassing change, he stood undisturbed and steadfast, with no rival who could hope to reach the serene heights of his intellectual and moral power—towering above them all, the first citizen of the civilized world. [Cheers and long-continued applause.]

---

**Some Achievements of the Administration.**

---

## EXTENSION OF REMARKS

OF

## HON. ARTHUR B. ROUSE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. ROUSE. Mr. Speaker, I desire to call attention to some of the good legislation enacted during the past three years by this Democratic administration, and at the same time ask those who failed to support the administration four years ago, if this record of kept promises does not merit the commendation and support of all the people.

During this administration the following are some of the important acts which were passed by a Democratic House, a Democratic Senate, and signed by a Democratic President:

1. Passed the Federal reserve banking law, which takes from Wall Street the power of control over the volume of money of the United States and makes money panics impossible.
2. Amended the Federal reserve banking law, which permits associations of national banks to establish branches in foreign countries.
3. Passed a law revising the tariff downward, taking the tariff off of the necessaries and placing it on the luxuries of life.
4. Passed the income-tax law, which lifts the burden of taxation from the shoulders of the masses and places it on those better able to bear it.
5. Passed the Clayton anti-trust law, which prevents few men from controlling corporations.
6. Passed the eight-hour law on all Government work.
7. Passed the law providing for the election of United States Senators by a direct vote of the people.
8. Passed a law creating the office of the Secretary of Labor.
9. Passed a law creating a Federal Labor Employment Bureau.
10. Passed the seamen's law, which improves labor conditions on ship board and lessens the danger of ocean travel.
11. Passed the Federal Trade Commission law, which helps and protects honest business and curbs lawless trusts.
12. Passed a law providing for Government insurance on ship cargoes.
13. Passed a law extending the parcel post, reducing charges and increasing the weight limit on packages.
14. Passed a law broadening the scope of the Postal Savings Bank System by increasing maximum amount allowed to be deposited.
15. Passed the Federal farm-loan act, providing a system of rural credits, guaranteeing long-term, low-rate loans to farmers.
16. Passed $85,000,000 Federal-aid road bill.
17. Passed the Federal child-labor act, preventing shipment in interstate commerce of products of child labor.
18. Passed a Tariff Commission law, which takes the tariff out of politics and takes politics out of the tariff, with aims of regulating the tariff on scientific business principles.
19. Passed a law authorizing $11,000,000 for Government armor-plate plant.
20. Passed a law authorizing $20,000,000 for Government nitrate plant.
21. Passed the inheritance-tax law.
22. Passed a law taxing munitions of war.
23. Passed the uniform grain-grading act.
24. Passed the cotton futures act, restricting speculation in cotton futures.
25. Passed law giving Government regulation over warehouses and providing negotiable warehouse receipts.
26. Passed a law granting the Philippines greater self-government, but refused to fix date for their full independence.
27. Passed the President's eight-hour law for railway employees and averted a national railroad strike, and provided for Federal investigation of railroads by joint congressional committee.
28. Passed the workmen's compensation act for Federal employees.
29. Passed drastic retaliatory legislation against belligerent nations which discriminate against American firms and American products.
30. Passed the shipping bill, which establishes a Shipping Board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with foreign countries.
31. Passed a great "direct taxation" bill to raise $200,000,000 in revenue, chiefly from incomes, inheritances, and war munitions.

The President two years ago furnished Government money to aid in moving the crops when the money powers of the East were holding the great surpluses for speculative purposes.

The President averted a threatened panic at the outbreak of the great European war by offering to use the Government's money to handle the business situation.

More progressive legislation has been enacted during the past three and one-half years than in the previous 16 years of Republican rule. With this record to the credit of the present administration, which has control of the executive and legislative branches of the Government, do you think the people of the United States will demand a change of management in governmental affairs?

## The Negro as a Soldier and a Sailor.

### REMARKS
OF
### HON. MURRAY HULBERT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, September 6, 1916.*

Mr. HULBERT. Mr. Speaker, my attention has been called to a bill introduced at this session of Congress, which reads as follows:

A bill (H. R. 17183) to prevent the enlistment of negroes in the military service of the United States.

*Be it enacted, etc.*, That hereafter there shall not be enlisted or reenlisted in the military service of the United States, either in the Army or Navy, any person of the negro or colored race.

SEC. 2. All laws and parts of laws in conflict herewith are hereby repealed.

It was a source of genuine satisfaction that Secretary of War Baker expressed himself with respect thereto as follows:

My attention had not been before called to this bill, and, so far as I know, it has not been referred to this department for opinion. The purpose of the bill is to prevent the enlistment or reenlistment of people of the colored race in the military service of the United States. Any such bill would receive the disapproval and adverse recommendation of this department.

Those who are familiar with the history of our country from the armies organized by George Washington in the American Revolution down to the present day know that brave and often conspicuously gallant service has been rendered by colored troops. In the most recent instance, at Carrizal, in Mexico, these colored troops conducted themselves with the greatest intrepidity, and reflected nothing but honor upon the uniform they wore.

No one who recalls the glorious acts of patriotism and the daring deeds of bravery performed by the colored troopers at Carrizal, members of the Tenth Cavalry, to which Maj. Charles Young (colored), a graduate of West Point, is attached, but will regret and condemn this intemperate and unpatriotic action upon the part of the Representative who had the temerity to introduce such a measure, which, needless to say, can never be expected to receive serious consideration in or be reported from the committee to which it has been referred.

Some time since my attention was called to a movement inaugurated by the National Memorial Association for the erection of a monument in the city of Washington, D. C., in honor of the colored soldiers and sailors who fought in the wars of our country, indorsed by such organizations and eminent men as Department of the Potomac, G. A. R.; Woman's Relief Corps, Department of Potomac; Army and Navy Union, District of Columbia; Spanish War Veterans, District of Columbia; Hon. JOHN W. KERN, United States Senator, Indiana; Hon. MOSES E. CLAPP, United States Senator, Minnesota; Hon. THOMAS TAGGART, United States Senator, Indiana; Hon. ISAAC R. SHERWOOD, Member of Congress, Ohio; Hon. PHILIP CAMPBELL, Member of Congress, Kansas; Hon. L. C. DYER, Member of Congress, Missouri; Hon. MARTIN B. MADDEN, Member of Congress, Illinois; Hon. W. A. RODENBERG, Member of Congress, Illinois; Hon. JOHN W. WEEKS, United States Senator, Massachusetts; Dr. S. M. Newman, president Howard University; Hon. Franklin K. Lane, Secretary of the Interior; Hon. G. M. Saltzgaber, Commissioner of Pensions; Col. John McElroy, past senior vice commander in chief G. A. R.

Mr. Speaker, under leave to extend my remarks, I present the following statement:

THE NEGRO AS A SOLDIER AND SAILOR.

More than a half century ago the martyred Lincoln wrote the emancipation proclamation that gave freedom to the slaves of America. Immediately following that memorable event the Civil War closed. Within the past few years several appropriate celebrations have been held in commemoration of President Lincoln's noble deed. These events have passed into history and remain dear to the memory of a grateful people.

In every war of the Nation the negro has had his place—in the War of the Revolution, the War of 1812, at Mexico, in the Civil War, the Spanish-American War, and the punitive expedition now existing in Mexico. His bravery and loyalty have never been questioned.

His deeds of valor and sacrifice for the honor of the Nation and perpetuity of the Union have been told in song and story. But no monument of marble or bronze has been erected by the Nation nor the race with which he is identified, to be gazed upon by future generations and arouse in them veneration and pride for their heroic ancestry.

A MONUMENT SHOULD BE ERECTED.

It is quite proper that after these long, long years of seeming neglect a monument should be erected to the memory of the dead heroes of the colored race, who sacrificed their lives upon the altar of their country.

A PAGE FROM HISTORY—THE COLORED SOLDIER AND SAILOR.

They were found in all branches of the patriot Army. They generally served in the same regiments with the white soldiers. Connecticut, however, had one complete company of colored soldiers, and Rhode Island a complete regiment. According to an official report, there were in the Army, under Gen. Washington's immediate command, on the 24th of August, 1778, 775 colored soldiers. It is estimated that there was an average of 35 colored soldiers in each white regiment. This does not appear to include the colored troops furnished by Connecticut, New York, New Hampshire, and Rhode Island. There were altogether about 3,000 colored soldiers.

Some of the most heroic deeds of the War of Independence were performed by colored men. The first martyr in the Boston massacre, March 5, 1770, was Crispus Attucks. The Black Legion, organized in 1779 in Santo Domingo by Count D'Estaing, consisted of 800 young freemen—blacks and mulattoes. At the siege of Savannah on the 9th of October, 1779, this legion, by covering the retreat and repulsing the charge of the British saved the defeated American and French Army from annihilation.

A large number of colored sailors were in the Navy during the War of 1812. It is estimated that one-tenth of the crews that manned the vessels on the Great Lakes were colored. They served faithfully in all the battles of the Great Lakes, and in the Battle of Lake Erie rendered very effective service. In the celebrated picture of Perry's victory on Lake Erie is seen a colored sailor.

Gen. Andrew Jackson, September 21, 1814, issued a call to the free colored men of Louisiana to enlist. As a result 500 of them were organized into two battalions. These battalions distinguished themselves in the Battle of New Orleans. The Legislature of New York, October 24, 1814, authorized the raising of two regiments of men of color. As a result 2,000 colored men were enlisted and sent forward to the Army at Sacketts Harbor.

One hundred and seventy-eight thousand nine hundred and seventy-five colored soldiers were enlisted in the War of the Rebellion. The first colored regiments to be organized were the First South Carolina, in which the first enlistments were made May 9, 1862; the First Louisiana Native Guards, September 27, 1862; the Fifty-fourth Massachusetts, February 9, 1862; the Second Carolina Volunteers, February 23, 1863.

July 28, 1866, Congress passed a law that colored regiments should be a part of the Regular Army. The Ninth and Tenth Cavalry, and the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Regiments of Infantry were organized. March 3, 1869, a consolidation act was passed, and the Thirty-eighth and Forty-first were reorganized as the Twenty-fourth Regiment of Infantry; the Thirty-ninth and Fortieth were reorganized as the Twenty-fifth Regiment of Infantry. The Ninth and Tenth Cavalry won the reputation of being the best Indian fighters on the frontier.

At the outbreak of the Spanish-American War in 1898 the four colored regiments were among the first troops ordered to the front. Here again they won great distinction by their bravery and daring. Colored soldiers took a more conspicuous part in the Spanish-American War than in any previous war waged by the United States. At the first battle in Cuba, Las Guasimas, the Tenth Cavalry played an important part by coming to the support of Col. Theodore Roosevelt and the Rough Riders. The Twenty-fifth Infantry took a prominent part in the Battle of El Caney. The Ninth and Tenth Cavalry and the Twenty-fourth Infantry rendered heroic service in the famous Battle of San Juan Hill.

1. It appears from the official records that the following named volunteer organizations, officered wholly or in part by colored men, served in the War with Spain:

Third Regiment Alabama Infantry.
Eighth Regiment Illinois Infantry.
Companies A and B, First Regiment Indiana Infantry.
Company L, Sixth Regiment Massachusetts Infantry.
Twenty-third Regiment Kansas Infantry.
Third Regiment North Carolina Infantry.
Ninth Battalion Ohio Infantry.
Sixth Regiment Virginia Infantry.
Seventh Regiment United States Volunteer Infantry.
Eighth Regiment United States Volunteer Infantry.
Ninth Regiment United States Volunteer Infantry.
Tenth Regiment United States Volunteer Infantry.

2. According to the latest compilation, the number of colored volunteer troops in the service of the United States during the War with Spain was 10,189. This number does not include the four colored regiments of the Regular Army, which had an average strength of 3,328 enlisted men during the calendar year 1898.

The enlisted strength of the four colored regiments of the Regular Army on February 28, 1899, near the date of the close of the War with Spain, was 3,339 men.

## The Philippine Bill.

### SPEECH
OF
### HON. MANUEL L. QUEZON,
RESIDENT COMMISSIONER FROM THE PHILIPPINES.

IN THE HOUSE OF REPRESENTATIVES,

*Monday May 1, 1916.*

The House, in Committee of the Whole House on the state of the Union, had under consideration the bill (S. 381) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. QUEZON. Mr. Chairman, we are all, I am sure, conscious of the fact that the question before the House is of the utmost importance, of vast consequence to both the American and the Filipino peoples. Your action will, indeed, affect not alone you and us of the present generation, but those coming after us—generations yet unborn. And so, it is with a very deep sense of grave responsibility that I shall make my statement.

You are writing history to-day, and it lies entirely within your power to determine what that history shall be—whether it shall be one worthy of the past of this great Republic, a realization of the noble purpose for which it was founded, or a bold and frank departure from what you have asserted to be American ideals and American principles. The people of the Philippines are in suspense; their eyes are now anxiously following the proceedings in this chamber, the very life of their country hanging in the balance. Shall justice at last be done to them? Shall the untold sacrifice in blood and treasure made in the past now bear its fruit?

Shall we, after centuries of subjection, be after all permitted to lift up our heads and face mankind as an emancipated people, placed upon the same footing as those who are already the masters of themselves and their country; or must we still wander, a people without its own country or flag, with but feeble hopes in the future? The answer is yours.

To discuss in detail, within the time allotted me, the bill now before the House is, of course, impossible, and perhaps unnecessary. The chairman of the Committee on Insular Affairs [Mr. JONES] has done this better than I could hope to do. It is the main issue involved in the bill that I am particularly interested in, and to that question alone I shall address myself. That issue is contained in the provisions of section 34, commonly known as the Clarke amendment. The rest of the bill is very defective. It is not quite as liberal as the bill introduced in the House by the gentleman from Virginia [Mr. JONES]. Indeed, some of its provisions are inconsistent with the theory underlying the bill; there are too many limitations imposed upon the powers granted to the Filipino people; then the prohibition clause, known as the Gronna amendment, reduces the income of the Philippine government at a time when we shall be most in need of revenue, since we must prepare for the increased expenses that will result from the forthcoming establishment of an independent government. But despite these objectionable features of the bill, I am willing to have it passed as it is rather than to endanger the adoption of the Clarke amendment.

Mr. Chairman, it would be a lack of candor for me to say that the Clarke amendment constitutes, in my opinion, the best and wisest way of disposing of the Philippine question. I think I could propose a better solution, or, at least, one that would better safeguard the interests of my people and be more satisfactory to them. But, as a practical man, I must deal with conditions, and so, there being no other proposal for Philippine independence which could possibly have any chance of getting through, I am for the Clarke amendment body and soul. [Applause on the Democratic side.]

The substantial merit of the Clarke amendment lies in the fact that it provides for the establishment, within a short period of time, of an independent Philippine government, a government

that will be of, for, and by the Filipino people, absolutely free from any foreign control and interference; a government which it is our fondest ambition to have, as it is our God-given right to establish, the only kind of government under which we can live happily and content. [Applause.]

Mr. Chairman, I shall not on this occasion deal with the question of whether or not the Filipino people are capable of governing themselves. I have discussed that question time and time again, both upon the floor of this House and elsewhere, and, I dare say, it is, with most of you, no longer a debatable point. Those who, in spite of the splendid evidence given by the people of the Philippine Islands in their exercise of the power heretofore granted them by the United States, still insist that we can not govern ourselves are either too blind to see the light or too prejudiced to admit it. It is a waste of time to try to convince them. The proposition to which I shall address myself is that on which honest men may differ, namely, whether the Filipino people, left to their own devices, would long remain independent. There are many well-meaning and sympathetic Americans who would not for one minute withhold from us the right to govern our own country except for the fear that we may fall prey to some other power, and in their good will toward my people, in their unselfish interest in our well-being they would not tolerate for a second a situation under which we might become the victim of any unscrupulous nation. All honor to these good-hearted, generous Americans! They are not to be confused with those whose real motive in opposing Philippine independence is the promotion of their own personal interests. These honest Americans deserve and have the affection of my people. But I want to tell them, Mr. Chairman, that in my opinion their fears are unfounded, that the specter of a nation awaiting patiently but watching guardedly the moment when the United States shall withdraw its sovereignty from the Philippine Islands in order to step in and get control of the Filipino government is the result of fancy.

Mr. MADDEN. Will the gentleman yield?

Mr. QUEZON. Yes.

Mr. MADDEN. Suppose the Filipinos were given freedom now, but before they had time to build up an army and navy some European or oriental country should undertake to take them away. To what civilized country would they look for protection?

Mr. QUEZON. Mr. Chairman, I was just saying when I was interrupted by the gentleman from Illinois [Mr. MADDEN] that, in my opinion, the hypothesis of the gentleman is not likely to become real; but if it should, let me assure the gentleman that we would look to no country for protection; we would fight as best we could, with whatever means we had; we would unhesitatingly consecrate once more to our love for freedom the best blood there is in our land [applause]; we could do no more.

Mr. O'SHAUNESSY. Will the gentleman yield for just one supplemental question?

Mr. QUEZON. Yes.

Mr. O'SHAUNESSY. Has the gentleman got that confidence in the nations of the world to believe that you will be left alone after you are free and independent without a strong army and navy?

Mr. QUEZON. Mr. Chairman, I have no more confidence in the nations of the world now than had those patriotic Americans who in 1776 dared to establish a Republic in this continent with but 3,000,000 people [applause]; but my people are just as willing—in fact, as desirous of taking their chance—as the founders of this Nation were, and I hope, in God's mercy, we shall be as successful. What would have been the fate of your country to-day had your forefathers been as timid, as fearful of other nations, as the gentleman from Rhode Island [Mr. O'SHAUNESSY] would wish us to be? The inquiry of the gentleman implies the assertion that no small country should aspire to be independent, for it surely will be grabbed by a stronger power. If this theory be true, the mouth of every Irishman patriot should be forever closed, since their noble ambition would simply mean a change of master. But that theory, fortunately for mankind, is unsound and not supported by facts. Look, if you please, at Holland, Switzerland, and other small countries, and tell me how long they have been independent. Does anyone question that they will remain so for years to come? Belgium, the latest instance of an unprovoked aggression, was not attacked because her conquest was sought, but because the passage of a belligerent army through her territory was deemed vital for the success of that army, and, I dare say, that the attack upon Belgium, more than any other cause, will defeat Germany in this war, since she so shocked the moral sense of the world that she alienated sympathies which might otherwise have been hers. It will only be, so we are told—and I believe it to be true—after the full independence of Belgium shall have been restored and after she has been fully paid for the damages she has suffered that the peace of Europe will come.

Mr. Chairman, it has been very unfortunate for the people of Belgium, it has meant to them untold sufferings, and yet, in a way, the world at large may be consoled that such a horrible incident should have taken place, for its consequences make us feel that it never will be lightly repeated. With the lesson in Belgium before it no nation, no matter how strong she may be, will be anxious to put herself in the moral predicament in which the German Government is now placed. [Applause.]

Mr. O'SHAUNESSY. Mr. Chairman, just one more question. Is it a fact that the politicos, so called, in the Philippine Islands believe that when they are given their freedom they will be supported in it by the Army and Navy of the United States, or is there any understanding that they will be guaranteed in their freedom or that something will be done for their neutralization?

Mr. QUEZON. Mr. Chairman, there may be Filipinos who believe or hope that when the islands are declared independent the Army and Navy of the United States will stand back of that declaration, either for a period of years or forever. I, for one, do not share that belief nor do I cherish such hope. Of course, I would not refuse the aid of the United States, and would accept it gracefully if it was tendered to us in case we were at war. But I would not ask for it. Certainly I would not make the independence of the Philippine Islands dependent upon the understanding that such aid would be given us. My attitude on this matter has always been this: That if we want to be independent, we should rely upon ourselves alone to maintain and defend our government. So far as I know, this is also the attitude of the immense majority of the Filipino people. [Applause.]

It is true that there are many Filipinos—and I am one of them—who would like to see the Philippine Islands neutralized, and we hope that the United States will take the necessary steps to secure an agreement with other nations to the effect that when the islands shall have been granted their independence by this Government, that independence shall be recognized and respected by all the nations of the world and not interfered with. But neither are we so much concerned with the necessity of neutralizing the Philippines as to make the granting of our independence dependent upon the success of a neutralization treaty.

Mr. Chairman, I have no fear that when your protection is withdrawn from the Philippines, we shall at once be invaded by a conquering army; not because I have any confidence in the altruism of the other nations, but because I know they are selfish. Just let me show you how the self-interest of the great powers will serve to protect the islands from foreign aggression. The nations that are strong enough to take the Philippines by force are England, France, Germany, Austria, Italy, and Russia in Europe, and Japan in Asia. England is satisfied with the maintenance of the status quo in Asia—that is to say, of retaining what she has and in not having others get more than they have now. She does not seem to have any special reasons for wishing to possess herself of the Philippines. On the contrary, there are two strong reasons why we should have no fears of England: First, because after the attitude which she has taken in this war—holding herself out as the friend of weak nations—she could not well adopt a policy of conquest toward such a nation; second, because England would no more think of offending the American people than the United States would think of offending the English people.

These two English-speaking peoples are now friends and will remain so. It is evident that if the Philippines are made independent because, in their love for justice, the American people felt it their duty to allow us to set up our own Government, it would necessarily be offensive to the people of the United States to learn that another country had destroyed the government. This does not mean that the American people would go to war for us, but it does mean that they would have a feeling of resentment against the nation which has thus acted toward us. So England will not interfere with an independent Philippine government. Austria is out of the question, for she has no colonies in Asia and has shown no desire of late of acquiring them. How about France, Germany, Italy, and Russia? The interest of Japan, as well as that of England, will protect the Philippines from aggression coming from either of these countries. So there is left only one nation, and that is Japan, the very nation which is pointed out as the greatest menace to Philippine independence. Mr. Chairman, I have no doubt that if the Philippine Islands were given to Japan and the Filipinos were to acquiesce voluntarily to this transfer of sovereignty and would become patriotic Japanese, that Japan would be glad to take the islands. But Japan will make no effort, will shed

not a drop of blood, or spend a cent of money to acquire the islands once they are independent. There are only three objects nowadays for which a nation undertakes the conquest of another nation—territorial aggrandizement, commercial expansion, or military necessity. Japan does not need at present any territory in the Philippines. She has of recent years added to the empire more territory than she can easily manage. Besides, for her territorial expansion she is looking toward the north instead of toward the south. So, for the sake of gaining more territory alone, Japan will not undertake to conquer the islands. As for commercial expansion, the trade of Japan with Europe, China, and the United States will not be helped by the possession of the Philippines, for the islands are out of the way in all these routes. As for strategic reasons, the Philippines are no more needed by Japan than they are for commercial reasons. No possible enemy of Japan, after the United States has left the islands, would come by way of the Philippines. Therefore I can see no reason why Japan would have any special desire to seize the islands. Again, England could not look with favor on the action of Japan in taking over the Archipelago, for that would place Australia too near Japan to be safe or comfortable. So, Mr. Chairman, this talk of the Philippines being grabbed by Japan the day after you had left us alone is absolutely unfounded, and no one familiar with the international situation in the Far East would take it seriously. [Applause on the Democratic side.]

Mr. MILLER of Minnesota. I understood the gentleman to take the position that there is no danger of Japan conquering the Philippines in case the Philippine Islands are independently free?

Mr. QUEZON. Yes.

Mr. MILLER of Minnesota. But for the purposes of this next question, Does the gentleman think there is any possibility that Japan would go to war with the United States for the purpose of getting the Philippine Islands if our sovereignty remained?

Mr. QUEZON. That is a very delicate question for me to answer. That is a matter for American statesmen and Japanese statesmen to settle. [Applause.] I have my own opinion as to what would be the relations between the Philippines and Japan if we were independent, but I should not care to be placed in the position of telling this House things concerning the relations between the United States and Japan.

Mr. MILLER of Minnesota. If the gentleman thinks that Japan would not fight the Filipinos in order to get the Philippine Islands, does he think that Japan would fight the United States in order to get the Philippine Islands?

Mr. QUEZON. Since the gentleman insists, I think I can point out to him some difference from the standpoint of Japan between the Philippines as an independent nation and the Philippines as a colony of the United States. The Philippines, as an independent nation, would not be a source of danger to Japan, but the Philippines under American sovereignty might well be a menace to Japan's interest in the Far East. [Applause on the Democratic side.]

Mr. Chairman, I feel that I have fully demonstrated that, as conditions in the world stand to-day, if you grant the Philippines their independence, that independence will be recognized and respected by all the powers. Therefore I see no reason why you should withhold from us that right which we long to exercise and which by every divine and human law is really ours.

Statements have been made to-day to the effect that this is the anniversary of the Battle of Manila, and it has been alleged that because of this fact this is an ill-chosen day to bring up a bill providing for the independence of the Philippine Islands. Ah, Mr. Chairman, you could have selected no better day than this to decide that the Filipinos shall have their independence; you could in no more fitting manner celebrate Dewey's victory in the Manila Bay. I remember with what unbounded enthusiasm the Filipino people received the news of the declaration of war between the United States and Spain. It was heralded to them, as it was heralded to the rest of the world, as a war not to be waged for territorial expansion, not made in a spirit of conquest, but undertaken by a liberty-loving people in order to free the oppressed people of Cuba.

The Filipinos, of course, understood that this meant freedom for them as well, for, to their minds, you could not follow one policy in Cuba and another in the Philippines. We in the islands were also struggling for our freedom. We fought by your side in that war. We hailed the American soldiers as the liberators of our people; we looked upon your victories as our own victories and gave you credit for the victories won by our own soldiers. It was a common enterprise against a common enemy. You received our aid, knowing the reason why it was given you, namely, because we believed in good faith that if we took your side, you would set free our country. And so, after those long and weary years have gone by, it is now well nigh time for you to celebrate Dewey's victory by granting independence to the Philippine Islands. Thus you will prove that that victory was won not for the purpose of taking other people's land, not for the purpose of opening for your goods new markets, not for the purpose of giving your administrators new subjects, but in the true spirit of that noble task which you have undertaken from the beginning of this Republic—to do your part in the emancipation of mankind.

Mr. Chairman, there is just one more point which I wish to make in connection with the statement of the gentleman from Tennessee [Mr. AUSTIN], that all the churches in the Philippines, Protestant and Catholic alike, are against independence. I do not know how much truth there is in such a report; but, if it be true, I hope it will not be out of place for me to remind the representatives of these churches that we are the only Christian people in the Far East, and it is, therefore, a duty which they owe to themselves to favor Philippine independence. [Applause on the Democratic side.] Shall it be said that the Christian religion, under whose doctrines we have lived for over 300 years, has not made us at least as good citizens as other oriental peoples? Why do they want American sovereignty of the islands? Do they, mayhap, need American guns to preach us their religion? Christianity is founded upon love, and it is only through love that Christ wishes kingdom established. Christianity is the great teacher of freedom, of equality among men, and he betrays his faith who would use a Christian church's influence to subjugate any people. To the Catholic Church, especially, I have this message to send: Most of us, if not all of us, are Catholics. We have had no other civilization except that which was taught us by the Catholic Church. To say that we are not capable of governing ourselves is to assert that the Catholic Church has been a failure in its civilizing influence in the Philippine Islands. [Applause on the Democratic side.]

---

**The Tragedy and Pathos of the Little Nations.**

---

## EXTENSION OF REMARKS

OF

## HON. JOHN R. FARR,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. FARR. Mr. Speaker, in the fearful struggle of the giant nations of Europe in which millions have been killed and maimed, lands devastated, homes destroyed, hearts broken, and sufferings and hardships beyond the power of expression, the tragedy and pathos of the little nations touch the very depths of our souls. What terrible afflictions they have endured! Without responsibility for this conflict of slaughter they are forced into it under different Governments, and

KINDRED ARE KILLING KINDRED,

desolating each other's lands and homes, and making widows and orphans of their families. Wedged in between the fighting nations the smaller countries and their possessions are swept over and back again many times by the bloody struggle for supremacy.

So terrible have been the poverty and suffering in some of these helpless countries that children under 7 years of age have ceased to exist.

Untold misery has been the lot of the little nations. For centuries their heroic struggle for liberty has been the theme of the poet, the orator, and the essayist, and to-day in the very frightfulness of this calamity the hope and the cry of these oppressed peoples are for national unity—for self-government. Through many, many years of conflicts, defeats, oppression, and persecution they have held tenaciously to their language and national spirit. Their achievements under great difficulties mark them as thoroughly capable, and justice, in the interest of humanity and civilization, should accord them independence.

Millions of the representatives of these races are useful and valued citizens of the United States. Loyal and devoted as they are to their adopted country, their hearts beat in sorrow and sympathy for afflicted kindred in their native countries. Mindful of the rich traditions of the lands of their birth and inspired by, and appreciative of, the glorious freedom and enlarged opportunities for education, industry, and commerce enjoyed under the Stars and Stripes, for which some of their splendid country-

men fought and bled, they are eager and anxious that this great country shall use its good offices and powerful influence for the liberation of the oppressed nationalities so that they might enjoy the blessings of freedom.

In connection with these remarks, Mr. Speaker, I desire to present the following resolutions:

We, the citizens of the United States and delegates representing different lodges of the Lithuanian Alliance of America, existing in most of the States, assembled in convention at the Falcon's Hall, Eighteenth and Carson Streets, Pittsburgh, Pa., on June 10, 1916, after a thorough deliberation on the effects of the terrible war now raging in Europe, have unanimously passed the following resolutions:

Whereas the Lithuanians, Letts, and other smaller and oppressed nationalities and races are not responsible for the provocation of this devastating and barbarous war, and yet are subject to the most atrocious treatment and even kinspeople are compelled to war against their nearest relatives; and

Whereas in the interests of civilization and the better future of humanity it is imperative to prevent a repetition of such horrors as are witnessed in Belgium, Serbia, Lithuania, Poland, and elsewhere: Be it *Resolved*, That (1) we demand the recognition of the rights of the Lithuanians, Letts, and other races and nationalities, which until the present day have suffered oppression, to possess property, to be independent, and to choose any form of government which these races consider the best suited to themselves.

(2) We hereby indorse the bills of MEYER LONDON and JOHN R. FARR, introduced in the House of Representatives and the Senate of the United States.

(3) We ask that the United States Government, at the conclusion of this most atrocious war, instruct its envoys to the peace conference to use their efforts in the liberation of the Lithuanians, Letts, and other oppressed nationalities—Poles, Ukrainians, Belgians, Serbians, and others.

(4) That a permanent international tribunal be established for the settlement of misunderstandings between nations, races, and nationalities with the power to enforce its decisions.

(5) We especially request the honorable Speaker of the House of Representatives and the United States Vice President to see to it that our resolutions are carried out for the benefit of progress and civilization and for the happiness of the world.

At the convention the above resolutions were unanimously adopted by our organization, Lithuanian Alliance of America, consisting of 14,580 members, it was voted to send a copy of this to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives, the Secretary of State of the United States, the governor of the State of Pennsylvania, the Pennsylvania United States Senators, MEYER LONDON, and JOHN R. FARR, Representatives in Congress, with an earnest request for their cooperation in the furtherance of the objects expressed.

Attest:

STINEY GEGUZIS,
*Chairman of the Convention.*
PIUS NORKUS, *Secretary.*

## Zebulon B. Vance.

### EXTENSION OF REMARKS
OF
### HON. HANNIBAL L. GODWIN,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. GODWIN of North Carolina. Mr. Speaker, it is fitting that we should pay tribute to the cherished memory of Senator Zebulon B. Vance. I shall not undertake to recite the full record of his life and public service.

Senator Vance belonged to that type which we fondly term "a man of the people." To the American mind this phrase is richly significant. It denotes a self-reliant man of courage and energy who by native ability and application has carved his way to a high and respected station among his fellow men. All who knew him fully understand that these qualities were exemplified in the earnest and industrious life of North Carolina's greatest chieftain. In early life he showed that he was destined to become a leader in the affairs of men. His habits were industrious and his disposition was genial, and as a consequence he rapidly gained the respect and love of all who knew him. The people of North Carolina displayed their high regard for his ability and honesty by repeatedly electing him to positions of high honor and trust. There was a mutual confidence and cordiality between him and his constituents, with a large number of whom he enjoyed personal and intimate acquaintance. He had a magnetic openness of manner which easily attracted friends and invited men to salute him in terms of easy familiarity; but in purpose he was sincere and ardent, and as he pursued his path through life he strove always to show kindness, to bring a smile to the face of sorrow, and to create happiness and hope among those where formerly there had been but misery and dejection.

To-day he lies at rest among the people whom he loved and served and who in return were loving and loyal to him. By them his memory will ever be kept green and the recollection of his splendid qualities of mind and heart will ever be enshrined in their memories. And we, his colleagues, even among the changing conditions of this busy place at a later date will affectionately remember him always.

## Army and Navy Legislation to Date—Two Years Lost in Dawdling.

### EXTENSION OF REMARKS
OF
### HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. GARDNER. Mr. Speaker, over two years have passed since the European war broke out and nothing effective has been done in the way of preparedness legislation until the end of last month. Think of that. A conflagration blazing around the world, with sparks falling on every side of us, as President Wilson puts it, and yet nothing doing except dawdle, dawdle, dawdle. Of course, Congress has been blamed for the delay; and, by the way, I notice that whenever anything goes wrong nowadays Congress gets the blame, and whenever anything goes right in the way of legislation President Wilson's coterie bombards our unfortunate ears with the statement that it is a victory for Wilson over an obstinate and incompetent Congress.

Now, let us look the facts straight in the face on this preparedness business. A good many newspaper men and a good many Congressmen began to turn their minds to the subject of our Army and our Navy just as soon as the European war broke out over two years ago. Almost at once the press began questioning the adequacy of our defense. Definite charges were made to the effect that our battleships were equipped with obsolete torpedoes, that our submarines were worthless, that our target practice was miserable, that our crews were insufficient, that many of our battleships belonged to time-honored vintages of the remote past, that valuable craft were detained in "cold storage" or "reserve," as it was euphemistically called, and, worst of all, that the civilian head of the Navy and his senior official advisor, Admiral Bradley A. Fiske, had arrived at great differences of opinion. As to the Army, the public was told that the regular troops available for a mobile or field army amounted to less than 30,000 men, which, by the way, is the force requisite to man just 6 miles of trenches. It was said that we had practically no reserve ammunition, no large field artillery whatever, a good deal less than 700 cannon and field howitzers, and only three-quarters of an hour's supply of ammunition for the guns of our coast defenses. As to our militia—our National Guard, as it is now called—we were informed that there were on paper just 120,000 of them, but that of that number only 77,000 enlisted men had taken the trouble to go to camp in the preceding year. To crown it all, we were told that the modern guns of the great foreign dreadnaughts so outranged our own coast-fortification guns that parts of the cities of New York and Boston could be bombarded without the slightest danger to the attacking vessels.

NERVOUS AND EXCITED.

Congress met in December, 1914. All eyes were watching for the reports of the Secretary of the Navy and the Secretary of War. All breaths were held to listen to President Wilson's determination. The Senate and the House were called together in joint session on December 8, 1914. Secretary Garrison at once admitted the truth of all that had been said about the War Department. Secretary Daniels, on the contrary, reported the Navy in a superb state of effectiveness, adequately manned, and thoroughly prepared. The President announced to Congress that the country had been misinformed, that our defense had not been neglected, that there was no new need to discuss the questions of the Nation's armament, and that those who felt otherwise were "nervous and excited." I ask you in all fairness; in the face of those assurances from President Wilson and Secretary Daniels, men to whom the people had intrusted the duty of informing us of the state of the Nation, can you blame Congress for the passage of the pitiful Army and Navy legislation of 1915?

Oh, I know very well that President Wilson boasts that he is the servant of the people, and that he waits until he knows the people's will. It is his business to be the leader of the people, not their follower. He has lost two precious years, and if disaster should befall American arms before we are ready to defend ourselves Woodrow Wilson is responsible, because in the matter of preparedness he kept his ear to the ground instead of boldly taking the lead. No heading of preparedness parades on Pennsylvania Avenue, no munching of his own utterances, no dazzling speaking tours will make the people forget that Woodrow Wilson has been but a slow follower in the wake of this great movement.

THE NEW NAVY LAW.

The Democratic press heralds the new Navy law as Wilson's victory over Congress. It is true that the President had difficulties with many men on his own side of the House, but the difficulties were of his own making. Only a year and three-quarters ago he lined up those selfsame men to fight tooth and nail the program of those of us who sought to make the country prepared. Even Congressmen, feeble as our self-respect is said to be, can not gracefully stomach the presidential order, "About face." Be that as it may, the new Navy law is good. The building program, I regret to say, is not as large as that recommended by the General Board of the Navy on July 30, 1915. However, in view of the fact that Secretary Daniels has not even laid the keel of a good many of the vessels voted by Congress over 17 months ago, it is possible that we are undertaking as much as the building capacity of the country can conveniently handle.

AMAZING DELAYS.

Speaking of the slow construction of our ships, the country does not realize the awful slackness of the Navy Department in the construction of the ships authorized by Congress. In that respect Secretary Daniels is but little worse than his predecessors; but no world conflagration existed in his predecessors' days. Do you realize that the dreadnaughts *Oklahoma* and *Nevada* were commissioned for the first time in the spring of this very year, yet the money for those two dreadnaughts was voted by Congress in March, 1911—over five years before the ships were actually ready for duty? It is almost unbelievable, but nevertheless it is true. I find in the latest number of the Bulletin of the Navy Bureau of Construction and Repair that on August 1, 1916, there were 33 uncompleted submarines still under construction, and this without reckoning submarines authorized in the current year. Of these uncompleted submarines, one was authorized in 1908, one in 1909, four in 1912, three in 1913, eight in 1914, and 16 in 1915. The most noteworthy cases in this extraordinary list are the submarine *O–1*, submarine *O–2*, and submarine *Schley*. The *O–1* and the *O–2* were authorized 17 months ago, and their keels are not yet laid. The submarine *Schley* was authorized by Congress June 30, 1914, over two years ago. Secretary Daniels actually has made a contract which does not call for its completion until March, 1918, nearly four years after Congress voted the money. The *Schley* is to be a big sea-going submarine. The fact about the building contract is incredible; but nevertheless it is true. Secretary Daniels, on March 19, 1915, in the middle of a world conflagration, with sparks falling on every side, actually made a contract under which the Fore River Shipbuilding Co. is allowed three years in which to complete the submarine *Schley*. Meanwhile, that same Fore River Shipbuilding Co. is known to have constructed for the British Government in a period of five months at least 10 submarines of sufficient size to cross the Atlantic Ocean under their own power. When I look at this Bulletin of the Bureau of Construction and Repair, I am half tempted to believe the Navy yarn that Secretary Daniels' energy is all "muzzle energy."

ARMY LEGISLATION.

Now, let us take a look at the new Army legislation. I should think that Henry Ford would treasure as a souvenir the pen with which President Wilson signed the Army reorganization law of June 3, 1916. This new law was widely heralded as giving us an army of over 200,000 men. It did nothing of the sort. At most, it only gives us 175,000 fighting men, although it is true that hospital stewards and transportation employees and the like are technically enlisted men. But the 175,000 enlisted men of the line which the law gives us are only to be ours after the lapse of five years. For a year to come the new Army law allows us just a little over 105,000 enlisted men of the line, according to the figures furnished by Secretary of War Baker to Hon. GEORGE W. LOFT, a Democratic Congressman from the city of New York. As for field artillery and ammunition, we can not seem to grasp the lessons which the European war has taught us. The War Department has figured out in the report of the Treat Board that if we want to be safe we must have on hand at the outbreak of war against a first-class power field artillery and field-artillery ammunition to the value of $441,000,000. That is a startling sum, I admit, but, startling as it is, it will provide only sufficient cannon and ammunition to see us through the very earliest stages of the war. This year we have appropriated altogether, including the Army appropriation bill passed in August, $35,000,000 toward the amount which the War Department has declared is imperatively necessary. At that rate of progress, over 12 years must elapse before we attain the margin of safety. Meanwhile, instead of creating a real army or a real national guard, Congress, under the influence of the generalissimos of the National Guard Association, has endeavored to fix more securely upon the country the present absurd plan of 48 different amateur armies managed at 48 different State capitols. The result of trying to consolidate these 48 armies in time of emergency is only too visible on the Mexican border to-day. Twenty-eight days after the President had issued his call for troops, the War Department's figures showed that only 25 of the 48 little armies were represented on the border by any troops whatsoever. What the American people want, and what they will have sooner or later, is a real national guard divorced entirely from State control, trained, disciplined, and equipped by Uncle Sam and by Uncle Sam alone. That is what the country wants, and in my opinion that is what the National Guard itself wants, but it is not wanted by the politicians of the National Guard nor by the generalissimos whose rank and pay might badly suffer. After all, if we are to prepare, let us really prepare. Do not let us pretend to prepare. If we feel that we can trust this country's future to adroitly turned phrases rather than to strong right arms, why, then, let us let this preparedness question entirely alone. For myself I do not hesitate to say that we need something more than a navy, something more than a small standing army, something more than a national guard. I do not believe that the Nation will be safe until we have taught every young man in the country how to defend this land against its enemies. As a measure of democracy, as well as of safety, I advocate compulsory training in the duties of a soldier of every young American, rich or poor, high or low, the greatest and the least, elbow to elbow and side by side.

---

**The "Preparedness" Propaganda.**

---

## EXTENSION OF REMARKS

OF

## HON. FRANK BUCHANAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. BUCHANAN of Illinois. Mr. Speaker, as the closing days of this memorable session of Congress approach I can not but view with deepest regret the path of destruction that has been blazed through the broad field of democracy and humanity by the sordid conspiracy of the organized claque which ran wildly rampant over the country in the past few months shouting war and "preparedness." Plutocracy and special privilege have gained another victory. By every despicable and corrupt method yet conceived by mortal man the agents of the criminal rich have succeeded in rolling up an avalanche of mixed fear and false patriotism, which resulted in forcing through Congress enormous appropriations to be uselessly and needlessly expended for the expansion of our military and naval institutions, and for what?

No one has thus far indicated any unusual danger or the source from which danger of any sort might come. It is unquestioned that no power in Europe is in a position at this time to assault America. It should be equally clear that no European power can be in a position to assault America for a generation at the least. As for the much-talked-of Nippon, there is nothing there to give the slightest concern. We must give the people of Japan greater credit than to suppose them envious of our oriental "possessions." They have far more tempting prospects much nearer at hand—a rich territory with a developed industry and a kindred race. Furthermore, we are Japan's best customer. It will be years before exhausted and war-ravaged Europe will need Japan's peculiar merchandise. Europe will need pork and beans, flour, sugar, brick and mortar for a long time before she will want silks and embroidery, the deft artistry of the Orient. Break the commercial bond with America and Japan will stand face to face with financial ruin.

The real inspirers and promoters of this outrageous propaganda are the tariff barons, who see in vast expenditures excuse for wider, heavier tariff taxes; makers and dealers in war supplies, who see juicy plums of profits; shoulder strappers, who see promotions; bureaucrats, who see in a powerful war machine the club with which to reinforce their weakness in diplomacy or justice; powerful commercial combinations, who seek the aid of the Army and Navy of the United States in conducting a world-wide warfare of commercial robbery and plunder; and last, but not least, the big business interests of our own industrial life, who wish to hold a large standing army as an obstruction to the progress and welfare of the masses of wageworkers of the country. These are the interests that are responsible for this crime that has been committed on the people of this country, and let us hope that the great American people shall awaken to the true realization of their plight before it is too late and they find themselves embroiled by the treachery of these intriguing fools in a whirlpool of war and destruction such as now overruns the unfortunate people of Europe.

I have endeavored in every possible way known to me to bring the true facts in regard to this matter before the great masses of the people of this country, in an effort to stir up and crystallize a sentiment against this unholy propaganda and prevent the successful consummation of the sordid schemes of these war traffickers and their allied vicious interests. In the summer of 1915, during the recess of Congress and about the time our diplomatic relations with Germany were nearing the danger point, due to the sinking of the *Lusitania* and other incidents of similar nature, I associated myself with a number of high-minded, public-spirited citizens, in the interests of peace and humanity, by forming what was known as Labor's National Peace Council. It was our hope that by cooperating with the various labor organizations of the country, by addresses and literature, to spread the doctrine of peace among the people of the country, to offset the propaganda of the war traffickers, who through the big daily trust newspapers, their mouthpieces, were preaching the gospel of war and false patriotism, which has always been destructive to the interests of democracy.

With the exception of the original meeting of this organization in Washington, D. C., when it was organized, and an address in Madison Square Garden, New York City, my activities as a member of Labor's National Peace Council were confined to Chicago and the immediate surrounding territory. Yet what happened? What did these vicious interests do? Seeing that the purpose of our organization was opposed to their program of plunder and robbery, and fearing that our efforts might succeed in obstructing the free operation of their schemes, they succeeded by corrupt methods in securing an indictment against me and some of my associates in Labor's National Peace Council in the southern district of New York on December 28, 1915. This indictment has been pronounced as one of the most outrageous travesties upon justice ever recorded in the courts of our country by every lawyer in Congress, as well as those in civil life who have read it.

The following is an extract from the brief of Hon. H. Robert Fowler, presented before the Supreme Court of the District of Columbia in the habeas corpus proceedings sued out by certain of the defendants in this same indictment:

So far we have considered the indictment as to its sufficiency from a standpoint of pleading, and we have discussed its weakness with reference to the material allegations necessary to constitute a charge of an offense against the statute. Now we come to the consideration of its sufficiency from an entirely different standpoint.

CLAYTON ACT.

On October 15, 1914, what is known as the Clayton Act became a Federal law, section 6 of which declared—

"That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof, nor shall such organizations, or members thereof, be held or be construed to be illegal combination or conspiracies in restraint of trade, under the antitrust laws."

For all intents and purposes this is an amendment to sections 1 and 2 of the Sherman law, and acts as an exemption of farmer and labor organizations and the members thereof from its operations. If such exemptions had appeared in the original Sherman Act, there is no doubt but what this indictment would be fatally defective on account of its failure to set up such exceptions. It will be noted that the indictment failed to reveal the special business or organization to which all these defendants belonged, to wit, Labor's National Peace Council. Had it done so, as it should in fairness to the defendants, it would have enabled the court to see from the face of the indictment that the defendants were exempt under the provisions of section 6 of the Clayton Act.

The effect of section 6 of the Clayton Act is to define the Sherman law as applied to farm and labor orgainzations. This being true, the jurisdiction of the court for the southern district of New York is raised as completely by the pleading in this case as though the Clayton Act had repealed the Sherman law in toto.

* * * * * * *

Who will say that in exempting labor, agricultural, and horticultural organizations from the operation of the antitrust laws, including the Sherman law, is any greater discrimination than the new income-tax law exempting all incomes below a certain amount from any taxation whatever? Both of these laws were passed by Congress under constitutional powers similar, to wit, without limitation.

In the case of Loewe *v.* Lawler (208 U. S., 224) Chief Justice Fuller, in delivering the opinion of the court, said, among other things:

"Records of Congress show that several efforts were made to exempt by legislation organizations of farmers and laborers from the operation of the act, and that all these efforts failed, so that the act remained as we have it before us."

It seems reasonable that a fair construction of this language of the Chief Justice indicates that Congress might, by appropriate act, exempt such organizations from the operation of the Sherman law, without violence to any constitutional provision. However this may be, it remains that section 6 of the Clayton Act is the law of the land until it has been repealed by either an act of Congress or by a decision of the Supreme Court in a direct proceeding to test the question of its constitutionality, and the courts of the land in the discharge of their official duties will take judicial notice of such law.

By a further examination of the Clayton Act we find that the last paragraph of section 20 directly sanctions all the ways and means enumerated in this indictment. That paragraph reads as follows:

"And no such restraining order or injuncton shall prohibit any person or persons, whether singly or in concert, from terminating any relations of employment, or from ceasing to perform any work or labor, or from commending, advising, or persuading others by peaceful means to do so; or from attending any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or abstain from work, or from ceasing to patronize or employ any party to such dispute, or from recommending, advising, or persuading others by peaceful and lawful means so to do, or from paying or giving to, or withholding from any person engaged in such dispute, any strike benefits or other moneys or things of value, or from peaceably assembling in a lawful manner and for lawful purposes, or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto; nor shall any of the acts specified in this paragraph be considered or held to be violations of any law in the United States."

This list of exceptions include every ways and means recited in the indictment and charged to have been agreed upon by the defendants to aid them in carrying into effect the supposed conspiracy, and the last clause of this paragraph declares emphatically that the doing of all the acts and things enumerated in the indictment shall not be held to be violations of any of the laws of the United States.

This provision of the Clayton Act is universal in its application, and makes no exemption whatever, dealing with all alike and giving all like and equal opportunities under its provisions, and it can not be held to come within a class of laws which are passed under the constitutional limitations and which make exemptions contrary to such limitations. Such as are dealt with by the Supreme Court in the Connolly case, supra, and the decision of the Supreme Court holding the old income-tax law of 1894 unconstitutional.

Applying the doctrine that courts will take judicial notice of all Federal statutes, it is to be presumed that in passing upon these questions the courts will not only take into consideration the provision above referred to in the Clayton Act, but that they will also take into consideration the doctrine laid down in the case of In re Neagle (135 U. S., 1), supra, wherein it was decided in construing section 761 of the Federal statute dealing with writs for habeas corpus that—

"This, of course, means that if he (meaning the defendant) is held in custody in violation of the Constitution or of a law of the United States, or for any act done or omitted in pursuance of the law of the United States, he must be discharged."

After a careful examination of the different parts of this indictment we are driven to the conclusion that its author undertook to set up a wholly imaginary case. The entire absence of the names of those corporations who are engaged in the manufacturing and transportation of munitions of war for foreign belligerent countries emphasizes this idea to the point of certainty. This entire trade is confined to a very few giant concerns under the control of J. P. Morgan & Co. as the agent of such foreign traffic, which can be enumerated on the fingers of one hand, to wit, the United States Steel Corporation, the Armor Trust, the Bethlehem Steel Co., the Du Pont Powder Trust, the Remington Arms Co., now owned by the Midvale Steel Co., and the transportation is controlled by the Joint Traffic Association—official classification committee—and the Ocean Steamship Pool.

If the business of any of these companies had been threatened or interfered with by the defendants, it would have been very easy for the pleader to have presented such evidence to the grand jury, as the chief offices of all these corporations are located in the city of New York, within gunshot distance of the United States attorney's office. If he was unable to secure such evidence, so vital to the validity of the indictment, how was it possible for him to secure any real evidence of the alleged conspiracy to restrain either the manufacture or transportation of the products of these great concerns?

Labor's National Peace Council was in touch with 6,000,000 men, yet it will be remembered that not one single overt act is charged in the indictment as a means to effect the supposed conspiracy. It is reasonable to conclude that if such acts had been known to the pleader he would have inserted them in the indictment. We must therefore conclude that the grand jury was unable to learn of any such acts during the entire four months of its sitting. We are driven to the further conclusion that the conspiracy must have been a very weak and harmless one if, during the entire eight months it was alleged to have been in operation, it was unable to do any single overt act to accomplish its supposed purpose. As we have already clearly shown that the ways and means enumerated in the indictment are wholly nonculpable in character and expressly sanctioned by the highest law of the land, how can anyone doubt that these defendants and their organization, Labor's National Peace Council, as its name indicates, was anything but a lawful and peaceable educational propaganda to aid in keeping this country out of war?

The fact that a charge of impeachment had been made in Congress against the United States attorney two weeks before this indictment was returned must have acted as a high incentive to prompt him to extraordinary efforts for revenge; and as the former United States district attorney, Henry A. Wise, of the southern district of New York, has recently testified that the grand jury of this district is nothing but a "rubber stamp" in the hand of the United States district attorney, it

was all the more easy for him to secure the return of this fraudulent indictment without evidence.

All citizens of the United States have a right to oppose any act, deed, trade, profession, or business illegal in character or affecting the public morals, especially if they menace the general welfare of the country. If foreign commerce in munitions was being conducted in violation of the Federal statutes or international law, such as shipping high explosives on vessels carrying passengers, or lending money by the Government to belligerent countries to be used against any country or countries with which we are at peace, in order to promote such foreign commerce, then the American people, either singly or collective, had a right to protest against such business by any and all of the ways and means set up in this indictment.

If the substance of the speeches and writings recited in the indictment had been disclosed by the pleader, as was done in the Cash Register case, supra, it would have revealed that they were directed to the various branches of the executive department and to Congress in the interest of preserving "a friendly and impartial neutrality," to keep this country out of war, and to prevent the violation of Federal statutes and international law, and that in all cases in which they were used with labor and farmer organizations that each was done as an appeal for assistance in this peace propaganda in which Labor's National Peace Council was interested.

To extend the operation of the Sherman Act to the activities of such organizations as are enumerated in the indictment would be to establish a rule so universal and dangerous in its operation that it would destroy the collective energies of all benevolent and education organizations which are directed against vicious and immoral habits and customs. Churches, temperance unions, and other moral organizations have been making for more than a half century an active campaign against the use of intoxicating liquor as a beverage, and no one will contend but that they have been successful and have materially restrained both the manufacture and interstate and foreign commerce of such liquors. In many instances their use has been entirely blotted out.

Yet it would be a crime against civilization were such organizations even checked in their operations in the interest of humanity. An effort to extend the operations of the Sherman law for this purpose would meet with the universal condemnation of the public, and justly so, because it is well known that the excessive use of intoxicating liquor materially affects the general welfare of the Republic. What is true with reference to the activities of temperance organizations in the interest of man is true with reference to many other organizations which seek to elevate the standing of public morals.

This leads us back to the doctrine which has been universally adhered to by the courts, that the restraint of the interstate or foreign commerce must be direct and not indirect. There is scarcely any business, trade, or occupation which, if checked or stopped, would not in a measure lessen the production of either the crude or finished product and indirectly affect the interstate or foreign commerce flowing therefrom. The refusal of the farmer to produce farm products or lessen the acreage in any commodity, or the failure of any workman on the farm to execute, in a skillful way, the cultivation of the crop or crops, would, in a measure, affect the quantity of the farm products, and thereby lessen the interstate and foreign commerce in such products. We can readily see that the framers of the Sherman Act had in mind one great object, and that was to enact a law to prevent the direct restraint of interstate and foreign commerce and not to impede the activities of the citizen in his daily work or the activities of organizations in the interest of mankind.

Commenting on its invalidity and the fact that the indictment against myself and others in the Labor Peace Council was utterly void on its face, Representative JOSEPH TAGGART, of Kansas, a member of the great Judiciary Committee of the House of Representatives and himself an eminent lawyer, having been four years a district attorney and a master of the law covering indictments, said:

> I have read the indictment found against Representative BUCHANAN and others under the Sherman antitrust law. It charges them with conspiring to interfere with the business of persons engaged in foreign commerce, but the indictment recites that the names of these persons are to the grand jury unknown.
>
> Nothing could be more vague than this. Such an indictment was unheard of under the common law. Those who were charged with imagining the death of the king were not misled by the indictment, because everybody knew who the king was. If they were charged by the prosecutor with imagining the death of a king, but which king was to the jury unknown, even Jeffries of notorious memory would have banished him from the courtroom in disgrace or would perhaps have told the king not to send a fool into the courtroom again. No two persons could in safety walk the streets talking together in America if it can be successfullly charged that they are conspiring to injure parties whom no one can name.

The newspapers of the country, by circulating false statements and otherwise, have attempted to belittle my efforts to remove from office by impeachment proceedings H. Snowden Marshall, district attorney for the southern district of New York, and have attempted by misstating the facts to show that my impeachment charges were instituted as a revenge for the indictment brought against me. The fact that my impeachment charges were presented in the House on December 14, 1915, two weeks before the indictment was found in New York, December 28, 1915, ought to be sufficient to nail that lie where it belongs. However, in order to show to my constituents and the people of this country that I was not only exercising a right as a Member of Congress by performing a highly important public duty in bringing impeachment charges against this corrupt Federal official, I shall here insert some of the findings of the members of the subcommittee of the Judiciary Committee of the House, which, in themselves, prove the absolute unfitness of Mr. Marshall to hold any public office:

SEPARATE VIEWS BY HON. JOHN M. NELSON.

*To the Committee on the Judiciary of the House of Representatives:*

The undersigned, a member of the subcommittee of the Committee on the Judiciary, appointed to investigate the impeachment charges of Representative FRANK BUCHANAN against H. Snowden Marshall, district attorney for the southern district of New York, respectfully submits the following views:

The undersigned is convinced, upon the evidence submitted, that H. Snowden Marshall is not a fit person to hold the office of district attorney for the southern district of New York. However, if the Committee on the Judiciary or the House shall insist upon a recommendation by the subcommittee at this time, either for or against the impeachment of Mr. Marshall upon these charges, without authorizing the production of the grand jury minutes disclosing how indictments were found against Representative BUCHANAN and others, Rae Tanzer, her attorneys and witnesses, I am constrained reluctantly to concur in the recommendation of the subcommittee that further proceedings under Resolution No. 90 be discontinued.

The investigation, notwithstanding it has extended over a period of months, has been necessarily unsatisfactory and incomplete. Not only has the committee been refused permission by the district attorney, acting under the direction of the Attorney General, to inspect the grand jury minutes in these cases, but has been subjected to the most severe attacks on the part of Mr. Marshall himself and newspapers doubtless inspired by him, which has greatly handicapped the official discharge of our duties. Under these restricting circumstances the committee confined its efforts to the taking of testimony of witnesses suggested by the impeaching Member, Mr. BUCHANAN, who has from the beginning protested that this was most unfair to him. He has properly insisted that it was his duty merely to furnish prima facie proof, and that the committee should make an independent investigation of the various charges presented by him against this district attorney. The committee, however, found itself surrounded by a stone wall of difficulties. On every hand the investigation found itself confronted with cases being tried in the courts, and the committee was reluctant to take any steps to procure evidence that would in any way interfere with their trial.

The undersigned has, therefore, been constrained to come to the conclusion that either the grand jury minutes in the BUCHANAN and Rae Tanzer cases should be produced by judicial process, or the investigation should be postponed until after the trial of these pending cases. While there is evidence before the committee which is conclusive of the fact that Mr. Marshall should be removed from the office of district attorney, it is my best judgment that the case should not be presented to the Senate by the House until all the facts that are readily available have been developed, which under the described rule has not been found possible.

The large purpose of any impeachment proceeding is not punishment of any individual, but the removal of any civil officer, invested temporarily with power, who deprives citizens of rights or jeopardizes their liberty, and, therefore, is a menace to our republican form of government.

The Constitution denounces impeachable offenses under the terms of "treason, bribery, and other high crimes and misdemeanors." It is not contended in the charges of impeachment against Mr. Marshall that he has been guilty of either treason, bribery, or crime. His offenses, therefore, are covered, if at all, by the word "misdemeanors." From the beginning the precedents show that attorneys for civil officers on trial in the Senate have insisted that the language of the Constitution covered only indictable offenses, and the Senate, with possibly one or two exceptions, has seemed to incline toward that view. The House, however, through its managers, has invariably insisted that impeachment is a "means of removing men from office whose misconduct imperils the public safety and renders them unfit to occupy official positions." Believing that this is a sensible and just interpretation of the intent of the framers of the Constitution, and that it is supported by the best American text writers on the Constitution, the undersigned has adopted that standard by which to measure the official conduct of Mr. Marshall as district attorney. Temperamentally he is neither calm, dispassionate, nor judicial. He is a person of inordinate self-esteem, keenly sensitive to criticism, and passionately vengeful. Within the brief period that he has acted as district attorney he has wielded the tremendous power of his office not to do impartial justice but to achieve his object or to carry out the wishes of others intrenched in power. He is a "respecter of persons" and does not hesitate to use unjustifiable means to befriend whom he would befriend and to destroy whom he would destroy. As a consequence of his misuse of power, the rights of American citizens have been abridged, their reputations ruthlessly ruined, and their liberties jeopardized without just cause.

Respectfully submitted.

JOHN M. NELSON.

---

STATEMENT OF FACTS ACCOMPANYING VIEWS OF MR. NELSON.

Your subcommittee agreed upon the following grouping of charges:

Group A consists of charges 1, 2, 3, and 4, as they appear in the printed record, which we designate as "conspiracy with persons and corporations."

Group B consists of charges 5, 6, 7, 8, 13, 14, 15, 23, and 24, "matters relating to improper procuring of indictments."

Group C consists of charges 9, 10, 11, and 12, "relating to the shipment of war munitions, and conspiracies with foreign Governments."

Group D consists of charge 16, "unlawful use of public funds in labor matters."

Group E consists of charges 17, 18, 19, 20, 21, and 22, "attempting to improperly influence and improperly procure judges for the southern district of New York."

Group F consists of charges 25, 26, 27, 29, 30, 31, 32, 33, and 37, which "relate to what is known as the case of Rae Tanzer, and improper conduct with James W. Osborne in improperly using the power of his office."

Group G consists of charges 28, 34, 35, 36, 38, 39, and 40, "relating to his personal unfitness."

The subcommittee did not have before it evidence tending directly to sustain charges contained in the foregoing subdivisions, except charges 5 and 6 in group B, charges contained in group F, and charges 34 and 38 contained in Group G. Charges 5 and 6 in group B are as follows:

"No. 5. I charge him with corruptly inducing and procuring grand juries to return into the District Court for the Southern District of New York of indictments charging crimes without there being evidence before said grand jury which would in any degree justify the finding and filing of such indictments.

"No. 6. I charge him with being guilty of oppression in corruptly procuring indictments from the grand jury in said district charging reputable citizens with crime, although there was no evidence before the grand jury which would in the least warrant such charges."

These charges were intended to cover the indictment found against Representative BUCHANAN, with others, charging them with conspiracy to restrain trade. Knowing that the House was very much concerned to ascertain whether a Member had been questioned in another place for utterances of his on the floor of the House, the undersigned, as a member of the subcommittee, has given careful consideration to all the evidence, so far as it relates to the finding of this indictment, and has concluded that while there is evidence before the committee to show that testimony was taken before the grand jury relating to the indictment and the persons against whom it was found, ranging over a period of several months prior to the indictment, yet there was no testimony before the subcommittee to show either the relevancy of the evidence before the grand jury or the sufficiency thereof.

In reference to Representative BUCHANAN'S indictment, attention is directed to these significant facts:

(a) The Department of Justice has failed to prosecute the Metropolitan Tobacco Co., although its own investigator, Mr. Marshall's assistant, Mr. Thompson, found and reported it had and was continuing to violate the antitrust law. (See also testimony of Ochs, Locher, and Wolf.) Yet it did indict a Member of Congress and others of the peace council, opposing the sale of munitions of war and the program of preparedness by means of speeches and literature, under the antitrust law.

(b) The indictment itself is vague and indefinite, stating no specific fact either as to manufacturers, articles restrained, or places where strikes have been incited.

(c) The testimony of grand jurors discloses (1) that Mr. BUCHANAN'S name was handed in by the district attorney with others, and that he was indicted with them in a "bunch"; (2) that no name was added by the grand jury and no name taken away; (3) that Representative BUCHANAN as president and Mr. Taylor as his successor were indicted, but the secretary and treasurer and other officers were not; (4) that Mr. Marshall summed up the law, and that his assistant, Mr. Sarfaty, summed up the evidence; (5) that this was unsual unless requested by the jury; and (6) that the jurors discussed in the grand jury the impeachment of Mr. Marshall by Representative BUCHANAN on the floor of the House.

(d) Henry A. Wise, former district attorney, testified that the grand jury is "worth a 2-cent piece"; in other words, that it is merely a rubber stamp or cash register manipulated by the district attorney.

In short, with reference to the indictment of Mr. BUCHANAN, all the surrounding circumstances lead to the conviction that the production of the grand jury minutes so strenuously denied the subcommittee, or the trial of this case, will disclose that he is the victim of hostile political and financial interests who feared the campaign begun by the Peace Council, through labor organizations, against the propaganda of preparedness and the sale of war materials and supplies to any of the nations now engaged in the European conflict.

Group F contains nine specific charges, all practically included in No. 25, which is as follows:

"No. 25. I charge him with having employed the powers of his office for the purpose of shielding and to prevent the exposure of unlawful and improper conduct of one James W. Osborne in relation to facts involved in civil litigation, which was pending in the State court in the State of New York."

This charge is intended to cover Mr. Marshall's use of the power of his office to assist his associate and friend, Mr. James W. Osborne, charged with seduction and breach of promise in a civil suit. In order that his favoritism may be seen in its proper proportion, all that is necessary is to contrast Mr. Marshall's action in the Rae Tanzer case with his action in the New York Tribune case. It is to be noted that in each case he deals with section 215, Criminal Code, which prohibits schemes or artifices to defraud by the use of the mails.

THE RAE TANZER CASE.

A virtuous young Jewess, Rae Tanzer, living with her two sisters, through a flirtation met with a person giving his name as "Oliver Osborne," somewhere on the streets of the city of New York, and subsequently went with him to Plainfield, N. J., where the injuries complained of occurred. Their relations continued for some time afterwards. Before bringing a civil suit, she claims to have discovered that Oliver Osborne was James W. Osborne, and she addressed him the following letter:

SUNDAY, *December 27, 1914.*

Mr. JAMES W. OSBORNE, Esq.,
*115 Broadway, City.*

DEAR OLIVER: Trying to change your mind? It's too late. You have ruined my life, and I hold you to your promises.

I have kept this trouble to myself, but I can't stand it any longer; therefore I'll have to seek help through other sources. I have waited this while thinking you would be reasonable and consider what this means to me.

I want no publicity, for there's still a little pride left in me, although you have taken most out of me. My meeting you Christmas eve was my chance. Taken by surprise, weren't you? Was as near to you on several other occasions before then, but didn't want to be bold. Will tell you when and how some time.

Did I get the letter you never sent me? Well, I still have the ones you sent me when you were the California ranchman, which I kept, not for a purpose, but because I thought you were just the grandest man, and I loved you with a heart that wasn't meant for a man like you to trifle with. You know it wasn't for the diamonds (that you are still having fixed for me) or your money. I was always in the habit of dressing nicely, but things weren't as nice with us lately. I was content. Did you ever hear me complain? In fact, I tried to hide everything until everything was in better shape.

You know I was a good girl until I met you, but I was so infatuated with you from the start that I lost my head entirely and didn't stop to reason, but always knew you would protect me, for I didn't think a man of your reputation would act otherwise; but I hope my doubt is all a misunderstanding on my part, for your sake.

Don't let me confide in anyone or do anything you wouldn't like me to do, for I haven't as yet, but will have to if you won't protect me. I knew you weren't going to meet me Christmas eve, but I went down anyhow. That all added to my misery. Will wait to hear from you until Saturday next, and then I shall not write you again.

There I stood waiting at the circle.

RAE.

Later Miss Tanzer employed counsel, and a civil suit was brought in the State courts to recover damages on the 16th day of March, 1915. Three days after the beginning of the civil suit, to wit, the 19th of March, 1915, she was arrested upon a warrant sworn out by James W. Osborne before the United States district commissioner, charging her with using the mails for the purpose of defrauding, etc., by the mailing of the above letter. Subsequently, her attorneys, their investigator, her two sisters, and other witnesses were indicted, charged with various violations of the Federal law. Miss Tanzer remained in the Tombs until she could secure bail. This proceeding resulted in the discontinuance of the civil suit. She testified before the subcommittee that she was persuaded to take this step because of pressure brought to bear upon her then counsel and bondsman, Mr. Spielberg, whom the undersigned believes to be a tool of James W. Osborne. This tool persuaded her to make a "recantation," which she did in part, but afterwards repudiated on the stand, and made a stipulation, which is as follows:

Miss RAE TANZER: I am satisfied to attempt to help you out of the difficulty you got yourself into, because I believe that you were honest all the way through.

I am likewise satisfied that your attorneys, Slade & Slade, and the other witnesses were honestly mistaken. I will not tell anything you told me unless I have the absolute assurance of the authorities that nobody connected with your case will be hurt in any way.

HAROLD SPIELBERG.

Notwithstanding this stipulation, she has been prosecuted, not for using the mails to defraud, which has been pending for nearly a year and a half, but for perjury, with the result that the jury disagreed. From all the facts and circumstances in evidence it is clear to the undersigned that in this case Mr. Marshall came to the rescue of his friend Osborne, who was in danger not only of a civil suit, but of prosecution under the Mann Act, and by "wrenching jurisdiction" from the State court he has been ruthless in depriving Miss Tanzer of her rights, her attorneys and witnesses of their reputations, and all parties to her suit have had their liberties jeopardized in the most flagrant manner. Indeed, the treatment accorded this young woman, the clerk of the hotel, Mr. Stafford, and the other witnesses is cruel and heartless beyond description.

THE NEW YORK TRIBUNE CASE.

Contrasting Mr. Marshall's action in the Tanzer case with his action in the New York Tribune case, the facts in evidence show that the parties interested were a real estate promoter, Mr. Mayo, and the New York Tribune Co. The scheme for which the mails were being used was to advertise that every person subscribing to the Tribune for six months would be permitted to buy a lot in New Jersey for $19.60. The evidence disclosed the fact that the land was not worth not to exceed $6 per acre, but was being sold at the rate of $320 per acre. It consisted of scrub-oak land and sand. This "summer resort," as it was designated, had neither sewers, lights, sidewalks, nor other improvements. The estimated profit out of the scheme is about three-quarters of a million dollars. This swindle was investigated by a reputable newspaper man, who reported the facts to Mr. Marshall. Mr. Marshall secured the services of two post-office inspectors, McQuillan and Schaeffer, who, after five or six weeks of investigation, reported the scheme a swindle and a plain case of violation of law. Now, what was done? Although the grand jury was in session it was not brought to its attention. Although Mr. Watson urged that subpœnas be issued to bring persons before the grand jury, Mr. Marshall refused to do so. At the end of the investigation, having before him the reports of the inspectors, he wrote his friend Henry A. Wise, attorney for the Tribune Co., that there would be no prosecution. To Mr. Watson he gave the explanation that he wanted "to let Henry collect his fee and get away on his vacation." Nearly a year has gone by, and still no action has been taken, nor has the case been presented to the grand jury.

KEEN & BARD CASE.

Contrast, again, Mr. Marshall's treatment of the Tribune Co. with his treatment of Keen & Bard, with reference to this same section 215 of the Criminal Code. In the latter case the testimony shows that Roger B. Wood, assistant to Mr. Marshall, acting as attorney for the Pike's Peak Film Co. and the Pike's Peak Photo-Play Co., sought to recover from Messrs. Keen & Bard certain films. The said Roger B. Wood appeared at the place of business of Mr. Keen and demanded the return of the films. According to the testimony of Mr. Keen the conduct of Mr. Wood was boisterous and threatening. He declared that he was a United States district attorney. Some months afterwards a warrant was sworn out through the agency of Mr. Marshall's office, before the United States district commissioner, charging Messrs. Keen & Bard with having used the mails for purposes of defrauding, etc. Bard was arrested late in the afternoon and had to spend the night in the Tombs. Keen dodged the process until Monday, and then appeared with his bondsman. Both were released on bail. The bail demanded was $10,000, and this excessive sum was asked, according to testimony, at Mr. Wood's request, acting as assistant district attorney. Mr. Henry A. Wise, former district attorney and friend of Mr. Marshall's, appeared as their attorney. Subsequently, in an interview with the district attorney, Mr. Wise brought Mr. Marshall's attention to the facts in the case as not being in violation of any United States statute. By reason of Mr. Wood's private interest in the matter Mr. Marshall referred the decision of the case to Mr. William L. Wemple, as referee, to determine whether there has been any violation of Federal law. Mr. Wemple decided in the negative. Notwithstanding, the case was referred to the district attorney's office of the county of New York, and again, after investigation, it was found that these gentlemen had violated no law.

THE SLADE & SLADE CASE.

Contrast, again, the treatment accorded James W. Osborne, an attorney, with the treatment accorded David and Maxwell Slade, as attorneys. Although James W. Osborne is charged by Rae Tanzer with conduct which was a clear violation of the Mann Act, yet Mr. Marshall not only does not prosecute him, but rushes to his defense in the civil suit for seduction and breach of promise. He is persuaded by Mr. Osborne to proceed in the Federal courts against Rae Tanzer three days after she had started her civil suit in the State court, and her attorneys had agreed to all Mr. Osborne's requests for bill of particulars and speedy trial. Obviously, if there was any offense at all committed by Miss Tanzer, it was a case of blackmail and, therefore, wholly within the jurisdiction of the State courts. Although a pretended Oliver Osborne appeared one day at the home of James W. Osborne, he immediately disappeared and has never been found. In fact, as testified to by Mr. Le Gendre, the newspaper men have had great sport at the expense of Mr. Marshall over the alleged Oliver Osborne. Slade & Slade, who were attorneys for Rae Tanzer in the civil suit, were made the victims of all

the oppressive power of Mr. Marshall's office, because they ventured to start this civil suit against his friend Osborne. They have been indicted, charged with conspiracy to obstruct justice. Two overt acts have been set forth, the one being that Mr. Slade whispered to his own client in open court, "Here he comes," meaning James W. Osborne. A most ridiculous suggestion. Think of an attorney being indicted for obstructing justice in whispering to his own client in open court. But even this charge is denied by witnesses, and it is by no means certain that even this whispering occurred.

The other charge relates to the preparation of an alleged photograph of Rae Tanzer and James W. Osborne taken together. The photographer of the New York World testified that the scheme was proposed by Mr. Osborne himself in the presence of the district attorney, his assistants, Wood and Hershenstein, and a Government inspector. The purpose was to trap, if possible, the Slades into the use of this composite photograph as a part of their evidence. The testimony shows that the Slades did not suggest it, and that the photographer never reported the matter to them. He thought it too ridiculous to attempt. Yet these attorneys have been indicted for obstructing justice, and this is one of the counts in the indictment. The undersigned has carefully read the evidence in the trial of Slade and Slade, which terminated abruptly, because the sitting judge became ill. From beginning to end it is a travesty upon justice. The whole case was tried to vindicate James W. Osborne in the public mind, and to prove, if possible, that he was not the Oliver Osborne. The record, consisting of 904 pages, discloses that not a page contains any effort to prove either of these overt acts on the part of Slade & Slade. Not a reference was made in the trial to the use of the composite photograph.

THE SAFFORD CASE.

Finally, contrast Mr. Marshall's conduct with reference to the crime of perjury. Mr. Frank J. Safford was clerk in the hotel at which "Oliver Osborne" and Rae Tanzer registered.

He appeared before the commissioner as an unwilling witness and identified James W. Osborne as Oliver Osborne. For so doing Mr. Marshall has had him indicted and tried for perjury. The undersigned has carefully read the record in the Safford case and again wishes to state that it is a rank travesty upon justice. The case from beginning to end was manifestly conducted with the sole purpose of clearing James W. Osborne, if possible, in the public mind from the charge of being the Oliver Osborne who seduced Rae Tanzer. Attention is also directed to the fact that the judge in that case was exceedingly unfair, admitting evidence that had no place in the case, and in his instructions to the jury argued the case as Mr. Osborne's attorney, going outside of the record to convince the jury that James W. Osborne was not Oliver Osborne. The jury found Safford guilty, but recommended him to the clemency of the court. Subsequently, upon appeal, the decision was reversed, the court holding the defendant had a right to be tried according to the rules of law and evidence.

In contrast with the treatment of Mr. Safford, who testified in a case, it is interesting to note that the first procedure against him was an affidavit by one Mayhew, a post-office inspector, who admitted upon the stand that he had no knowledge whatever of the facts to which he made an affidavit, and when asked why he made it replied that he was directed to do so by Mr. Roger B. Wood, assistant district attorney, and Mr. Marshall has disclosed the fact that he had full knowledge of this case and approves of everything his assistants have done in court.

ABUSE OF AGENCIES OF JUSTICE.

In order to condense this statement it is necessary to refer to these matters without going into detail. There is neither time nor space to refer to the testimony as to the misuse of power on the part of the district attorney in the use he makes of the grand jury, of subpœnas, and of indictments for conspiracy. The use of these agencies of justice by this district attorney's office has created a state of terror in this jurisdiction. While it can not be said that Mr. Marshall is the author of this abuse of power in the use of these agencies of justice, it is in evidence that he has not restrained but rather encouraged the extension of their abuse.

Respectfully submitted.

JOHN M. NELSON.

Referring to some of the cases prosecuted by H. Snowden Marshall, for the corrupt handling of which impeachment charges were brought against him, Congressman WARREN GARD, of Ohio, another member of the subcommittee, said the following in his report:

These cases were conducted principally by Roger B. Wood, an assistant in the office of the district attorney, Marshall, with the latter's full sanction and approval, and without desiring to make intemperate or unauthorized comment upon the conduct of the United States district attorney or his assistants in these cases, it does appear to me that the arrest and prosecution of the persons arrested and indicted in the United States courts in these cases, all of which grew out of the arrest of Rae Tanzer on a charge of sending a letter through the mails to James W. Osborne, with intent to unlawfully defraud, were not cases properly to have been brought in the courts of the United States, and their having been brought in said courts was a wrenching of the jurisdiction thereof.

It is through such corrupt officials as this that the munition traffickers have endeavored to railroad to jail each and every individual who attempted to in any way interfere with their despicable business in death weapons. However, in the operation of a conspiracy so sordid, so transparent, so noxious, it is unbelievable that the American laboring people will remain silent. If they will combine and stand united, the forces of privilege and monopoly must fall. Let it be understood that were there actual danger the laboring people of this country would need no forced levies to protect their honor and institutions. Never since the day when the embattled farmers and laborers stood "by the rude arch that spanned the flood to fire the shot heard round the world" has appeal to the patriotism of the American people been made in vain. They have given their labor, their lives, and the lives of their sons time and times, and will do so again as often as may be necessary to defend and preserve even the forms of freedom. They are the ones who have always borne the brunt of the fighting and paid all the bills, and they are opposed to this vicious propaganda. Only a short time ago I included in my remarks in this House (CONGRESSIONAL RECORD of May 25, 1916) a resolution adopted by the Chicago Federation of Labor, an organization of about 300,000 men, condemning the recommendations in the name of "preparedness" and also criticizing the motives of a "preparedness dinner" given by the Illinois Manufacturers' Association at the Shoreham Hotel, Washington, D. C., to which the Illinois delegation in Congress was invited. For inserting this resolution in the RECORD Congressman RAINEY took occasion to criticize my action and also defended the Illinois Manufacturers' Association; and I here desire to insert a letter sent me by Mr. John Fitzpatrick, President of the Chicago Federation of Labor, in reply to the attack of Representative RAINEY:

CHICAGO, ILL., *June 16, 1916.*

Hon. FRANK BUCHANAN,
*Washington, D. C.*

MY DEAR CONGRESSMAN: Recently it has been brought to our attention that Congressman HENRY T. RAINEY, of Illinois, felt called upon to defend the industries of Illinois because you had printed in the CONGRESSIONAL RECORD certain resolutions adopted by the Chicago Federation of Labor dealing with certain banquets and entertainment arranged by the Illinois manufacturers in order to convince Congressmen and Senators in Washington that the people "back home" in Illinois demanded preparedness.

The trip to Washington, the banquets, etc., were well staged, and the necessary bought-and-paid-for publicity would convince even the deaf and the blind that this was a real, live proposition; but our resolutions, representing a fairly large portion of the citizenship of Illinois, runing into a quarter of a million human beings, exposed the attempt of big business to make it appear that Illinois was like a howling mob demanding military preparedness and the unlimited manufacture of the munitions of war, and it seems that this exposure caused our Illinois manufacturers to get busy to cover up their tracks, and now we find our good friend Congressman RAINEY acting for the "defense." We are not surprised that a man of Congressman RAINEY'S standing in this Commonwealth is called upon to defend the industries of Illinois. His well-known fearlessness, honesty, ability, and intelligence made it imperative he be called upon to present such defense.

Surely it would never do to call upon Congressman MADDEN to make the presentation, because that would only look like muddying the water and throwing dust if he present the selfsame matter that was presented by our friend RAINEY. The Illinois manufacturers care nothing about Congressman RAINEY personally, but they do want the respectability and good standing of the Congressmen to bolster up their position.

Congressman RAINEY admits that he comes from an agricultural district, and when he talks about our backdoor neighbors—the Illinois Manufacturers' Association—it is like telling a married woman what a good man her husband is.

Congressman RAINEY may have read the pedigree of the members of the association in the Blue Book, but our knowledge of them is gained by actual experience in dealing with them.

Congressman RAINEY started his speech by questioning the good taste and resenting your action in having the resolution—passed by the Chicago Federation of Labor on April 16, 1916, as printed on page 7800 of the CONGRESSIONAL RECORD of April 25—printed in the CONGRESSIONAL RECORD, which, Congressman RAINEY claims, questions and reflects on the motives of the Illinois Manufacturers' Association in giving a dinner to the Illinois delegates in Congress and the Members who attended.

The resolution does not reflect on the Members of Congress who attended the banquet, and it was not intended to do so. The daily press reported, as stated in the resolutions, that the "patriots" of the Illinois Manufacturers' Association were going to Washington and let the Congressmen from Illinois know that the "sentiment of the people back home was for military preparedness" as advocated by them. The Chicago Federation of Labor and its membership was not consulted in the matter and knew nothing about what was being attempted before reading in the daily papers what the Illinois Manufacturers' Association proposed to do. We felt it our duty to inform the Congressmen of the views of the membership of the Chicago Federation of Labor on the matter, so they could form, with good judgment, an opinion as to what really was the "sentiment of the people back home."

The resolution questions the motives of the Illinois Manufacturers' Association or their disinterestedness and patriotism. We have an abundance of reasons for feeling that way. The Illinois Manufacturers' Association has bitterly opposed practically every law that is now on the statute books of this State in the interest of the toilers. During the session of the State legislature they maintain an expensive lobby in Springfield in opposition to measures proposed by men and women of the State that would create a real "preparedness"—the kind of preparedness defined in the resolution passed by the Chicago Federation of Labor and printed in the CONGRESSIONAL RECORD February 18, 1916, page 3209. They opposed such humane measures as the eight-hour bill for women; the minimum-wage bill; one day of rest in seven bill; anti-injunction bill; child-labor bill, and all similar legislation. They also publish a paper during the session appealing to all employers to use every means in their power to induce the members of the legislature to oppose all measures in our favor. During the session the members of both branches of the legislature are flooded with letters and telegrams urging them to vote against the working people. Many of these letters amount to a threat to defeat any member of the legislature who opposes their wishes.

And it may not be amiss to bring to your attention, and also to the attention of Congressman RAINEY, that because of such pernicious activities affecting and dominating the Legislature of Illinois our legislature was known as the "jack-pot legislature(3)." The question mark asks who provided the jack pot, and for what purpose.

Congressman RAINEY, in his speech defending the Illinois Manufacturers' Association, says:

"The organization exists, as I understand it, for the purpose of promoting the manufacturing industries of the great State of Illinois, for the purpose of looking after credits, better transportation, better and more efficient business methods, and for the purpose of developing and promoting the industries of Illinois," etc.

And, again:

"Since this organization was perfected and commenced its work Illinois has forged rapidly to the front as a manufacturing State, until to-day we are the third State in the Union in point of manufacture."

Well, we are glad to know this. Somehow we always labored under the impression or delusion that it was mostly due to the natural advantages of the State and the natural development of the surrounding States, and the fact that several hundreds and thousands of human beings congregated here and made it possible for the manufacturers to come and remain.

If these manufacturers did such wonderful things in Illinois, would it not be worth while for a State like Nevada to attempt to induce the entire bunch of Illinois manufacturers to move out to that State? Then, possibly, Nevada would become the third greatest manufacturing State in the Union.

Possibly Congressman RAINEY can explain the legerdemain whereby manufacturers are the means of making great States and the people are thrown into the discard.

Now, if Congressman RAINEY's premises is wrong in the foregoing we need not hope that he is absolutely accurate in all that followed when he presented the names and the industries of the officers and active members of the Illinois Manufacturers' Association. For illustration, we will take the Pettibone & Mulliken Co. If this concern told the Congressman or anyone else that they were not in the business of making munitions they badly distorted the truth, because they were in that business and they dare not deny it.

We did not charge, however, that the persons and firms mentioned by the Congressman were actually making war munitions. We do say that their deepest patriotism is actuated by the profits they find within reach as a result of the manufacture of war munitions. Their factories are now crowded with work which is being pushed out of eastern factories, because eastern factories are making war munitions. Then why not hollo, Hurrah for war munitions?

We think that in each instance where the Congressman used a name to show what good citizens made up the Illinois Manufacturers' Association that an investigation would show that these men are not good citizens. They did a grave injustice to him when they induced him to throw a halo of respectability around them.

Now, let us present another view of the activities of these gentlemen who are so ably championed and defended. In all the efforts of organized labor to promote and advance the interests of the workers one insurmountable obstacle presented itself, and that was the question of immigration. Before one boatload of immigrants had a foothold or a chance to become accustomed to the brutal and inhuman condition in American industries another boatload would be dumped upon our shores, supposedly for the purpose of giving them a chance to live like human beings and to aid our industries in securing sufficient employees, but in reality they were only used to discourage and keep in subjection those who arrived in the previous boatload. This kind of manipulation maintained a labor market worse than any slave market that ever existed, and the hopeless condition in which these unorganized, indefensible foreign immigrants found themselves when left to the tender mercies of our captains of industry will shock the conscience of posterity if the truth is ever written into American history.

Now, since the European war has practically stopped emigration, the workers here refuse to continue under the unbearable conditions and the oppression of the employers, and thousands upon thousands of these nonunion, unorganized workers are on strike in an effort to secure some consideration. The answer to their plea for justice is an injunction, and the only explanation that need be made as to the injunction is that the United States Congress absolutely refused to allow Federal courts to issue such injunctions. This action was had in the Clayton Act. Now we find the State courts being used by the employers to do the dirty work which the Federal courts used to do for the employers before they were stopped by the Clayton Act.

But immigration being practically stopped and the injunction as applied to labor disputes thoroughly discredited, how are these men who manage our industries going to meet the situation? It may not seem real in our day and time, when we hear so much about patriotism and love of country, that the employers of labor would rely upon hunger and starvation as the means whereby they will be able to maintain their strangle hold upon the toilers.

Men who employ thousands of other men in Chicago and who are resisting the efforts of these thousands to get some measure of justice told me point-blank that they intended to leave their plants closed down until the giant specter of hunger had sufficiently afflicted the wives and children of these strikers, that the strikers would be compelled to return to work, and the language used was something like this: "As an American citizen and an employer of labor, do you want this condition to come about among your striking employees, that they will be compelled to return to work because their children are hungry, and there is no alternative but starve or return to work?" The reply was: "We would not say that, but you have said it."

That is what is happening to-day in the city of Chicago. Mills and factories closed down, waiting the time when the workers' resources are exhausted and hunger compels them to surrender to the Capt. Kidd's of industry. Surely the industries of Illinois needed a defense, but the unfortunate thing about the defense is that a man of Congressman RAINEY's attainments could be induced to do the job.

JOHN FITZPATRICK,
*President Chicago Federation of Labor.*

As a further indication that the working people are opposed to this "preparedness" propaganda, I desire to insert a resolution adopted by the Bridge and Structural Iron Workers' Union No. 1, Chicago, indorsing my stand on the proposition, and also my reply in acknowledging same:

[Resolution unanimously adopted by the Local No. 1, Bridge and Structural Iron Workers' Union.]

Whereas the Steel Trust and other combinations are trying to convict and belittle the good that Brother FRANK BUCHANAN has done and is doing for the people and organized labor in Congress: Therefore be it

*Resolved*, That Local Union No. 1, of Bridge and Structural Iron Workers, hereby tenders him its moral support and good wishes in his impending trial; and be it further

*Resolved*, That a copy of these resolutions be spread on the minutes, a copy be given to the press, a copy sent to the Chicago Federation of Labor, and the Chicago Building Trades' Council, and a copy be sent to the international executive board, urging them to take similar action, and a copy be sent to Brother BUCHANAN.

R. L. JAHNCKE, *President.*
R. H. HOULIHAN, *Secretary.*

HOUSE OF REPRESENTATIVES,
*Washington, June 12, 1916.*

Mr. R. H. HOULIHAN, *Chicago, Ill.*

DEAR SIR AND BROTHER: In response to your kind favor of the 9th instant I wish to assure you that the resolution passed by Local No. 1 is, indeed, highly appreciated. Such resolutions mean more to me than the mere support of me personally. There has been and is now a principle involved in the malicious attack made upon me by the "system" or, what in my opinion may be better termed the "invisible government," which is the agent of the criminal corporations and individuals who are robbing and plundering the people, and, to my very deep regret, this so-called Democratic administration is an artful and willing tool.

It is hardly necessary for me to say to you that if I had thought of doing the things that I am charged with in the indictment in New York, namely, fomenting strikes to obstruct interstate commerce in munitions of war, I would have felt that I was wholly within my legal rights. The right to advise strikes has been claimed by organized labor for many years, and when the courts of our country denied labor its constitutional rights and perverted the laws already on the statute books, the Congress of the United States, with the view of removing all doubt of labor's rights in this regard, passed the Clayton Act. My indictment in New York is in direct violation of the provisions of the Clayton Act, and the disposition of this indictment by the courts is, therefore, of vital interest to the trade-union movement.

However, I never thought it proper—and it would have been contrary to my policy as a worker for the advancement of the interests of the working people and as a representative trade-unionist—to butt into matters in the way of an industrial strife that I was not directly connected with in an official capacity, and as you know, I have been somewhat conservative in regard to calling strikes. Anyway, I never thought about advising working people in munition plants or elsewhere to strike during my activities in Labor's National Peace Council, nor did I know of anything like that being done by any official of the council, nor even, in fact, anyone pretending to represent Labor's National Peace Council. I made an investigation on my own part, and the information I have obtained is that this a frame-up from start to finish; that no one did advise strikes who was connected with or in any way represented Labor's National Peace Council, nor was there any German money available for that purpose.

I was of the opinion at the time that I was attacked by the newspapers and following that the indictment in New York that it was a plan to coerce those who were striving to crystallize the sentiment that existed among the wageworkers of the country for peace, by the munition manufacturers, and also to discredit me because I had been able to exercise an influence to secure Federal legislation that would protect the rights of the wageworkers as defined by our Revolutionary forefathers. I have wielded a greater influence in that direction than I had ever hoped to myself, or suppose anyone else that knew me, and no doubt the agents of plutocracy became alarmed that my efforts might result in some real Democratic legislation that would stop them in plundering the wealth producers of the country and therefore it was easy for the munition manufacturers to secure the support of the beneficiaries of the criminal rich and their agents.

I have had many Members of Congress and single taxers throughout the country to volunteer their moral support, and one or two of my friends have offered financial assistance, but local No. 1 is the only labor union that expressed the true sentiment by resolution that would tend to encourage one to believe that labor really understood that this was their fight. In the impeachment proceedings, taking into consideration my small, limited resources, and the fact that H. Snowden Marshall is backed up by the "system" with unlimited financial resources, the newspapers as their mouthpieces, and the administration an artful and willing tool, I have had wonderful success and feel somewhat optimistic in regard to the matter, as I believe that I will have won a victory in the end, and in winning the victory will have rendered a service to the masses of the people in some degree at least by stopping one of the most vicious practices in our department of hyphenated justice.

I have been hampered very much for finances, but it seems that I am going to pull through without any further assistance. My attorneys have advised me that I ought to be able to recover substantial damages for the libels that have been published against me by the newspapers of the country, and therefore in the end I expect to come out of this fight in good shape. While pressing this impeachment investigation and making it very unpleasant for Mr. Marshall I learned that about all the lawyers in New York City, who might be put in the class of those who were representative of the house of Morgan and the Wall Street highbinders, very promptly volunteered personal and financial assistance to Mr. Marshall, and the bar association, which represents the aristocracy of the New York bar, passed resolutions and wrote to the Hon. CHAMP CLARK, Speaker of the House, asking that action on the Marshall contempt and impeachment proceedings be delayed until after the trial of my case in New York, a very pertinent and unethical procedure, to say the least. It was another example to me of how the big business crowd that is preying upon the wealth producers of the country always sticks to its friends, while labor by its indifferent disinterestedness usually neglects to give its friends and servants sufficient backing to make their efforts successful.

You perhaps know that I am not prone to patting myself on the back, and think that the working people should keep in mind their own cause instead of individuals, but I have for the last 20 years endeavored to serve the working masses by protecting and extending their rights to the best of my judgment and ability, and I am gratified in the belief that taking everything into consideration I have had quite a degree of success, and I am in harmony with the resolution so far as it would tend to arouse organized labor to stand true to those who have been and are still willing to serve them by exercising their influence to prevent their usefulness being destroyed by the vicious system which is everywhere and all the time the most dangerous enemy of the common people, and while the resolution is perhaps not worded as I would have written it, yet it has in it the spirit that is necessary to be crystallized and exercised in order that labor may secure justice.

I do not expect that it will be necessary for me to ask for or accept financial aid unless there are developments that I do not anticipate at this time. Of course I believe that you and other friends that know me and have given this matter proper consideration, without permitting

the scurrilous press to deceive you, understand that I am not pro-German. I am strictly neutral, and my sympathies go out to the masses of the people of all those war-stricken nations. I am pro-American, and have a keen desire to be of service in protecting the American people against the vicious propaganda being carried on to create a military spirit in this country which will destroy democracy and turn this Government over to one of the most dangerous influences that ever confronted the people in the history of the world, and to that end I shall continue to strive no matter if I am misunderstood by those whom I am endeavoring to serve.

Again, I wish to express in part, as I have not words at my command to fully express it, my appreciation of the sentiments of the members of local No. 1 in their indorsement of me by passing this resolution.

With best wishes, I am,

Cordially, yours, FRANK BUCHANAN.

Following is a resolution adopted by the Chicago Federation of Labor, September 2, 1916:

Whereas the elections are close at hand, men and women of labor should accept this opportunity, regardless of party, in furthering the nomination and election of such candidates as have stood for labor first, last, and all the time. There are but few candidates who can boast of 100 per cent labor record, and the first and foremost of them is FRANK BUCHANAN, candidate for Congress in the seventh congressional district. Brother BUCHANAN is a member of the Structural Ironworkers' Union No. 1, past international president of the Structural Ironworkers' Union. He is a member of the Public Ownership League of Cook County and was the first president of the executive committee. In short, he is one of us.

He has served three terms in Congress, and he has always been true to labor. He has been a stanch supporter and a persistent and intelligent advocate of many legislative prospects in the interest of the people, among such measures being the following, which have been enacted into law:

Election of United States Senators by popular vote.

Campaign publicity law to insure honest elections, and is supporting the Owen Corrupt Practices Act, which will further prevent frauds in elections.

The income tax, placing taxation on those most able to pay it.

Comprehensive reduction in tariff.

New banking and currency act. (He, however, is urging a more comprehensive monetary plan for the relief of the people, and has introduced a bill providing for removing the restrictions on deposits in the postal savings banks and the direct loaning of Government funds to farmers and home owners for long terms at a low rate of interest.)

Clayton Antitrust Act prohibiting interlocking directorates and removing from the provisions of the act labor and farmers' organizations, who were never intended to be subject thereto by the original legislators of that act.

Creation of the Federal Department of Labor, the Children's Bureau.

The Bureau of Mines act and the Bureau of Safety Appliances, as well as the phosphorus-match act for the protection of workmen.

Eight-hour law for work done for the Government as well as by the Government, and an eight-hour law for women employed in the District of Columbia; also voted for an eight-hour day for the railroad men.

The child-labor law.

The seamen's law, which has liberated the seamen.

Creation of the Industrial Relations Commission, whose recent report upholds the labor movement in its basic ideals for the improvement and betterment of working conditions.

Parcel Post System and subsequent extensions thereof by increasing the weight of acceptable packages, etc.

Rural-credits law.

The Colorado and Michigan strike investigations, through which were revealed to the world the horrible conditions under which these miners were employed.

Workmen's compensation act.

He has consistently and actively supported the immigration bill which is now pending in the Senate. He has always been on the job to secure provisions in the various appropriation bills, particularly the Post Office, Navy, and Army appropriation, to improve the working conditions of the employees in these departments, having aided in removing the gag rule from the Post Office employees, secured increases in their wages and reductions in the working hours. He was instrumental in securing increases in the wages of the mechanics at Indianhead powder mills and proving grounds of the Navy, and also at the Washington Navy Yard, and led to the fight to eliminate the Taylor system of so-called scientific management out of the Government arsenals and plants.

He has consistently endeavored to secure the passage of provisions in the appropriations bills providing that the Government manufacture its own supplies for the Army and Navy, and succeeded in securing the adoption of a provision that the Government plants be operated at least to the full capacity before any supplies could be contracted for, thereby saving the Government thousands of dollars in exorbitant profits to private manufacturers, securing better supplies, and providing better working conditions for the workmen.

In the past Congress he has waged a strenuous fight against the enormous expenditures under the guise of "preparedness." His position on the question of "preparedness" has been always in accord with the position taken by the Chicago Federation of Labor on February 6, 1916, when it adopted the report of its executive committee on "preparedness."

Because of his enviable labor record as a member of a union, the Public Ownership League, and Congress of the United States, big interests are now plotting his defeat.

Labor can not afford to have FRANK BUCHANAN, its champion, defeated.

His defeat means victory for big business; his election, victory for the common people.

Therefore, be it

*Resolved by the delegates of the Chicago Federation of Labor in regular meeting assembled, September 2, 1916,* That we urge all members of organized labor and good citizens to go to the polls at the coming elections and vote and work for the renomination and reelection of FRANK BUCHANAN as the Congressman from the seventh congressional district.

Respectfully submitted.

WM. F. PETZORE.
JOS. W. MORTON.
JOHN J. WALT.
F. G. HOPP.
MAY FREEMAN.
MARGARET A. HALEY.
WM. M. ROSSELL.

While it has been the policy of this organization not to indorse candidates before the primaries, we believe that Brother BUCHANAN, at the present time being in Washington in the interest of labor, should receive their support; therefore we, your committee on resolutions, recommend the adoption of this resolution.

Signed.

JAMES MAGRUE,
C. A. PENSE,
J. J. WALT,
*Committee on Resolutions.*

It appears that this outrageous propaganda for increased expenditures under the name of preparedness, which has occupied the major part of the headlines and space in our big daily newspapers, has been heralded so extensively to ward off the minds of the public from the real dangers that existed in the country, and in this connection I desire to call attention to an editorial in the Chicago Examiner, August 23, 1916, which seems to cover the point quite clearly:

TRUSTS MULCT PEOPLE MORE THAN WAR COSTS GREAT BRITAIN.

The war is now costing Great Britain $30,000,000 a day, or, say, $10,000,000,000 a year.

That is astounding enough. But a more astounding thing is that the war is costing the American people as much per week and per year as it is costing the British people.

The trusts and monopolies have used the war as a pretext for charging the American people considerably over a billion dollars for the necessities of life than they were charged in 1915.

Now, when Great Britain borrows and spends $10,000,000,000 in a year, she never expects to pay the principal of the loan. She will pay interest only, and that at not over 5 per cent in the long run. So we may say that the war is costing the British people this year the interest on her total borrowing for war purposes, which interest may be roughly set down as about $800,000,000.

And this huge sum is actually not so large by $200,000,000 as the increased taxes the trusts and monopolies have levied on the sugar, meat, flour, coffee, milk, butter, vegetables, rents, coal, gasoline, and other actual necessaries of life this year.

In 1914 gasoline sold to consumers at 16 cents a gallon; in 1915 at 20 cents; in 1916 at 26 cents.

The country consumed 35,000,000 barrels of gasoline in 1915, and will consume more this year. As part of the war tax levied on the American people, the gasoline trust alone has laid a surtax on industry amounting to over $150,000,000 since war was declared in Europe.

In 1915 sugar was 5 cents and 6 mills per pound, wholesale. The Sugar Trust has put the price to 7 cents wholesale this year.

In the year ending June 30, 1915, 8,625,793,328 pounds of sugar were consumed in this country. At this rate the Sugar Trust has laid a war tax of $120,762,106 on the American people in the past year.

The Meat Trust has increased the wholesale price of meats about 25 per cent on the average. For example, dressed hogs were 11 cents a pound in 1915, and are 14 cents now; mess pork has increased from $17 to $29 per barrel; dressed mutton from 8 cents to 12 cents a pound; dressed lamb from 13 cents to 15 cents a pound, and so on.

The fluctuations in meat prices make it impossible to estimate accurately the increased war tax put on the American people by the Meat Trust. But an estimate of $200,000,000 would not be far out of the way.

There are about 8,000,000,000 gallons of milk consumed yearly in this country in different forms. A direct and indirect increase of 1 cent a quart means a war tax of $320,000,000 on those who use milk, butter, and cheese.

When we add to these taxes on American consumers the extortions of the Flour Trust, the Coal Trust, the Paper Trust, and the increased rents and transportation charges due to these extortions, you see, do you not, that we Americans, though at peace, are paying more for this infernal European war than the richest of the nations who are keeping up this wicked and hellish struggle?

And yet, four years ago, we were asked to elect the present Democratic administration on the ground that the Democratic Party was opposed to trust extortion and would curb the power and end the extortions of the trusts if given the reins of Government.

We are quite sure that the history of the country shows no such extraordinary and amazing difference between promise and performance as this huge difference between the Democratic candidates' promises in 1912 to curb trust extortion and the Democratic administration's complaisant toleration of all these trust extortions in this year 1916.

If that is the way the Democratic administration believes the people should be protected from the trusts, then God save the people from their protectors.

Realizing the tremendous efforts and enormous expenditures of money that have been made by the war trust and other advocates of the so-called preparedness program, the friends of peace and the friends of labor should avail themselves of the opportunity in this campaign and organize in every State and every congressional district in the United States to exact from the candidates for the United States House of Representatives and Senate the pledge of every such candidate for whom they vote that he will cast his vote and use his influence as a Member of the House or of the Senate against war trust preparedness plans and in favor of peace at home and abroad, both industrial and international peace.

The people have the right to exact from the candidates positive and definite pledges, among other things that there should be no declaration of war without a referendum of the people, except in case of invasion, and that under no circumstances should there be a declaration of war or an entrance into war except by vote of the Congress of the United States, as the Constitution provides.

That the necessity for maintaining industrial peace at home is just as important a subject to the friends of peace as is the main-

tenance of international peace is shown by the terrible destructive industrial wars of the last two or three years in West Virginia, Colorado, and Michigan, as well as numerous other places throughout the country. In maintaining industrial peace, as in the maintenance of international peace, Congress is and should be the dominant and controlling branch of the Government, and every Senator and Representative should be pledged to use his vote and influence to compel the executive and judicial branches of the Government to properly perform their duty in enforcing the antitrust laws for the destruction and rooting out of those great monopolistic trusts, whose robbery and oppression of the masses of the people are the inciting cause of these industrial wars.

---

**Progress and Development of the Postal Service.**

---

## EXTENSION OF REMARKS
OF
## HON. HENRY T. RAINEY,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. RAINEY. Mr. Speaker, I avail myself of the privilege granted by the House to extend my remarks by inserting a statement by the Postmaster General in regard to the progress and development of the Postal Service:

OFFICE OF THE POSTMASTER GENERAL,
*Washington, D. C., September 7, 1916.*

HON. HENRY T. RAINEY,
*House of Representatives.*

MY DEAR MR. RAINEY: Complying with the request contained in your several letters addressed to me, and also your personal calls at the department, I give you herewith such information as is available at this time on short notice, showing what the Post Office Department has done and is doing for the rural population of this country, with especial reference to the benefits accorded the farmer.

In this connection, while I am sending you the information that you particularly requested, I am also inclosing herewith a brief statement of postal reforms and achievements under the present administration, touching every phase of the Postal Service.

The information follows:

WHAT THE POST OFFICE DEPARTMENT HAS DONE AND IS DOING FOR THE RURAL AND FARMING POPULATION.

PARCEL POST.

The United States parcel post is handling approximately 1,100,000,000 parcels a year, or over 90,000,000 a month. It is the largest express service in the world. It is impossible to state the proportion of this business which is distinctly rural. It is undoubtedly true, however, that the chief function of the Government's express service has proved to be agricultural. That is, the Government is the principal express carrier now operating between city and country and vice versa. The bulk of the parcel-post business is of this nature, whereas the bulk of the business of the private express companies passes between city and city.

The growth of the parcel post as a medium of exchange between city and country has raised questions which are now more or less bitterly in controversy. Retailing organizations of the cities have attacked the farm-to-table feature of the parcel service which involves direct exchange by Government express of farm products between the rural producer and the urban consumer. A second and a larger controversy has to do with the effect of the development of mail-order business upon the country merchant.

Does the farmer want his new express facilities—which he did not have before—taken away? Is he not better off now than he was before? Is he not brought into closer relation, into almost direct touch, with city life? Has the farmer not been drawn into closer association with the entire social and business fabric of our country? And does not this make for the intelligent development of the farmer, and also make the conditions surrounding life on the farm, more interesting and attractive? All these questions are applied from the purely business one of whether the parcel post tends to make the things which the farmer must buy cheaper, and to expand and improve the market for the things which he sells. Undoubtedly the parcel post does do both these latter things.

And the country farmer is not the only gainer because of the parcel post. The country merchant is offered new facilities, too, which may more than offset the business secured by the mail-order houses of the large cities. Because of the parcel post he is enabled to handle merchandise heretofore out of his reach, and naturally the scope of people to whom he can possibly sell is greatly enlarged.

In many sections farmers within second-zone distance of large cities have demonstrated that the farm-to-table selling by parcel post is a huge success. In a number of cities from 3 to 500 packages of farm produce are passing through the post offices daily. The new service has gained a foothold, and its expansion into genuine economic proportions is assured.

The following letter addressed by a farmer to former Postmaster Praeger, of Washington, D. C., reflects the attitude of practically every farmer toward the parcel post:

> To my mind nothing has ever been inaugurated in America which will tend to make the farmer more content to stay on the farm than the establishing of the parcel-post method of disposing of his products. It gives him business practice; it gives him the feeling of doing a mail-order business. He finds much more satisfaction and pleasure in preparing his produce for real appreciative human beings first hand as against a sort of commission machine into which his produce, no matter how painstakingly it has been prepared, is dumped. It also brings rural dwellers into close communion with the envied city residents. It gives him the feeling that his efforts are appreciated, and creates a high incentive to produce the best possible articles, and thus win the confidence of his patrons."

One of the most interesting developments of the last year in the Parcel Post Service is the increase in the average weight of parcels. The count of April 1–15, 1915, showed an average weight of 1 pound 7 ounces. The counts of October 1–15, 1915, and of April 1–15, 1916, both returned an average weight of 1 pound 11 ounces. The parcel-post act and the changes of rates and regulations as to weight limits subsequently made by Postmaster General Burleson greatly reduced the rates upon the heavier parcels and opened the mails to parcels weighing 20 pounds throughout the country and to parcels weighing 50 pounds within the first two zones or within 150 miles of the point of each shipment's origin.

Shortly after assuming office on March 4, 1913, it became apparent to me that radical changes must be made if this service was to meet the demands of the farmers, business men, and the general public. The expansion of the parcel post into a public utility of vast proportions is directly due to successive liberalizations of the parcel-post regulations, as follows:

(1) Reducing postage for distance up to the sixth zone.
(2) Increasing the weight limit from 11 to 50 pounds in the first and second zones and from 11 to 20 pounds beyond the second zone.
(3) Admitting books to the parcel post.
(4) Increasing the size limit from 72 inches to 89 inches combined length and girth measurement.
(5) Reducing the cost of insurance from 10 cents to 3 cents on parcels valued at $5 or less and introducing a graduated scale of low insurance fees for greater values up to $100.
(6) Authorizing the issuance of receipts for parcels shipped, which serve as evidence of mailing.
(7) Providing indemnity for partial damage as well as loss of parcels.

At many post offices Government-owned automobiles are used, day and night deliveries introduced, and refrigerators installed in order to safeguard perishable parcels. Damage to parcels in transit has been reduced to less than one-tenth of 1 per cent. These broadening activities of the parcel post in reaching out to the farm for its products for the city table and in providing a cheaper and more efficient package-transportation service for the general public has naturally met with much determined opposition from the business or persons that grew and prospered under the restrictions of a private express monopoly.

RURAL DELIVERY.

At the outset of this administration it was found that millions of rural residents had been denied delivery of mail by carrier because inefficient and extravagant administration of the rural mail service, together with the granting of special privileges of service to favored individuals and communities, had so depleted the appropriations that extensions could not be made to those who were entitled to service. This condition has been remedied in a drastic but thoroughly impartial and scientific manner. The discrimination against 3,280,000—actual count—rural citizens of the United States has been removed by the extension to them of the free delivery of their mail by carrier, a service unjustly denied them in the past. This has been done by the thorough reformation of the rural service in the department and in the field, and the adoption of standardized and efficient methods, and by eliminating duplications of service and service for which no justification was found to exist.

Since March 4, 1913, over 3,000 new rural routes have been established. More than 10,000 old routes have been extended so that they reach a greater number of people. Since March, 1913, the department has received about 3,000 additional petitions. These petitions have received prompt consideration, and final action has in no case been deferred longer than six months. Less than 200 are now awaiting review. In the handling of these

cases the present postal administration has proceeded in accordance with its earnest desire to meet the needs of the public and to render prompt and effective service.

It has been the policy of the Wilson administration to weed out privilege in every relation of the Government to the public. The Post Office Department has cut out the "pork" in the Rural Delivery Service, and has used the money thus made available to grant service to a large percentage of the rural population which needs and justly deserves such service, but has been denied the same in the past. Under the present administration the Post Office Department had adopted the policy, and consistently worked under that policy, of providing equal consideration and fair treatment to all sections of the country in allowing to each adequate postal facilities.

In some instances it was found that as many as six rural carriers were going over the same 8 or 10 miles of road daily. Thus the length of two whole rural routes was lost in useless duplications of travel. These conditions resulted from administrative inaction in the past, and naturally every advantage was taken of official negligence or incapacity to introduce and secure unfair privileges, promote personal interests, and mulct the Postal Service for partisan or political ends. The department is now, and has been, sincerely endeavoring to provide postal facilities with respect only to the needs of the people and the advancement of their welfare. Partisan bias and influence have been eliminated and action taken only upon good and sufficient evidence of the needs of the service, administered efficiently, utilizing every device and using every means to accommodate not only those already served but also as many new patrons as could be served under the appropriations granted by Congress.

POSTAL EMPLOYMENT AGENCIES.

One of the most serious problems in rural districts is the dearth of satisfactory labor. This condition frequently occurs and results often in defeating in a large measure the efforts of a whole year of planting and preparation. At the same time there always exists, unfortunately, a more or less numerous class of unemployed. In spite of all efforts which have been made in the past by farmers individually and through their grange associations, by city welfare associations, and by the railroads, this problem has not been satisfactorily solved. For this reason a bureau has been organized in the Department of Labor under the name of the United States Employment Service. The purpose for which this branch of the Government has been created is twofold. In the first place, it will investigate the conditions of employment and the labor market and will formulate recommendations for remedial legislation. In the second place, it will afford practical help and relief to the unemployed and to the employer, who is suffering from his inability to secure help. With a view to aiding in the practical work of the Employment Service, the Postmaster General has agreed to issue directions to all postmasters requiring them to act as the local agents of the Employment Service. The Department of Labor will thus be enabled to keep in close touch with the employment situation in every town and city. Through the rural carriers intimate knowledge will be available of the needs of practically every farmer in the United States. The Post Office Department is thus providing the machinery by means of which the Department of Labor will be enabled to apply every remedy in the power of the Federal Government to employment problems that may arise in the future.

Thus, farmers of the United States have been given the benefit of 58,000 intelligence offices, so to speak, by the Post Office Department's cooperation with the Department of Labor in carrying out President Wilson's scheme for finding employment for the unemployed. The matter of securing employees for the farmer when the demand for farm labor to harvest the crops is as important to the farmer as to those seeking employment.

Postmasters at every office have been instructed by the Postmaster General to lend every effort toward bringing the job without an employee and the employee without a job together.

Either employer or workman may obtain at any post office in the United States a blank application supplied by the Department of Labor, which, after filling out and signing, he may deposit in the mails anywhere free of postage. Sometimes an application for an employer and one for a worker in the same post-office neighborhood may be mutual in their requirements. In such cases the postmaster often brings the parties together without forwarding their applications. Otherwise all applications go from the post offices where deposited to the nearest station or substation of the Department of Labor. They are there compared for the purpose of noting reciprocal requirements and bringing work seeker and employer together. This is done as fully as possible at each station and substation. From July 1, 1915, to February 1, 1916, positions were found for over 83,000 of the unemployed. In the first seven months of the present fiscal year nearly three times as many men and women have been enabled to get positions as during the entire year of 1914.

The Government's new labor employment service plays a picturesque and important part in facilitating harvesting in the Middle West. For each 100 men needed to garner the huge grain crops of the Great Plains less than 10 have year-round jobs. Hence, beginning late in May, a vast army converges into the grain country, lured by the prospects of high wages with board and lodging provided.

The Government's new facility plays a large part in the mobilization and disposition of the units of this great wave of workers. By far the largest part come from the East. Kansas City and Omaha are the principal "gateways" through which these men pass and are sent to the farms. Taken as a whole, they are a strange mixture of the dregs and the best of the country's manhood.

In the past two years the Government has helped to recruit workers to harvest grain crops by means of notices, based on information furnished by authorized representatives of the grain-growing States, which have been posted in post offices just prior to the harvest season. It is estimated that nearly 175,000 men went to the harvest fields during the two seasons of 1914 and 1915.

The Postal Service, of course, is conducted for the benefit of the entire population of the country, and those living on farms and those living in cities share alike the benefits derived from the improvement during the present administration of all branches of the Postal Service.

FARM-TO-TABLE SERVICE.

The Post Office Department has brought to the doors of 20,000,000 rural residents the full advantage of a universal express service. The parcel post has wonderfully enlarged the market of the farmer, both for buying and for selling. The special shipment of some commodity urgently needed on the farm no longer means a trip to town, for the rural mail carrier now completes the delivery, and with no additional charge for that service. The postage on a parcel addressed to a resident in town will carry the same parcel to any patron of a rural route from the town.

From the commencement of the Parcel-Post Service, farmers have extensively availed themselves of the opportunity for purchasing by mail. The department has found that they have not so readily availed themselves of the opportunity for selling by mail. For this reason the farm-to-table movement was inaugurated. Under this plan postmasters at designated cities have received names of farmers who have produce to sell, together with price lists and descriptions of the goods offered, and have printed and distributed these lists in the widest manner possible to their patrons in the city. At the same time a consistent effort has been made to familiarize both the farmers and the city purchasers who might use this service with the necessary rules and regulations. With a view to further assisting this movement the rules and regulations have themselves been simplified and the rates of postage reduced. The result of these efforts has been to create the means for a large and profitable traffic in products of the farm which would otherwise go to waste or be disposed of at less advantageous prices. This direct dealing is, of course, not less desirable to the city consumer, who secures food products in fresh and satisfactory condition at prices lower than those prevailing in city markets.

No statistics have been compiled which show the volume of parcel-post traffic to and from rural districts. It is self-evident that the parcel post has benefited the farmers especially, as they represent the class which prior to the establishment of parcel post had no express facilities. It is reasonable to assume that the parcel-post business of farmers constitutes the important part of the Nation's parcel-post business, and it is steadily on the increase. Parcels are being handled in the mails at the present time at the annual rate of more than one billion.

The present administration has enlarged and improved the parcel post for the farmer by reducing the rates of postage, by increasing the weight limit, by providing the C. O. D. and insurance features, and by inaugurating the farm-to-table movement.

The farm-to-table movement was inaugurated in August, 1914. Nothing of this kind was attempted in the last administration. This movement may be illustrated by the plan followed at Philadelphia. A parcel-post produce list was issued. The postmaster sent a circular to the fourth-class post offices within 150 miles of Philadelphia notifying them to bring to the attention of their patrons the desire of the Philadelphia post office to include in a list of farm producers all those who wished to sell by mail. On the basis of the replies received in response to this circular the

parcel-post produce list was prepared and distributed free in Philadelphia on application.

Patrons of the Philadelphia post office were notified by circulars distributed by carriers that this list was available at the post office. The plan followed at Philadelphia was carried out in much the same way at each of the following post offices, which were designated to engage in the farm-to-table movement:

Birmingham, Ala.; Los Angeles, Cal.; San Francisco, Cal.; Denver, Colo.; Hartford, Conn.; Washington, D. C.; Athens, Ga.; Atlanta, Ga.; Chicago, Ill.; Rock Island, Ill.; Indianapolis, Ind.; Louisville, Ky.; New Orleans, La.; Baltimore, Md.; Boston, Mass.; Lawrence, Mass.; Lynn, Mass.; Detroit, Mich.; Minneapolis, Minn.; St. Paul, Minn.; Kansas City, Mo.; St. Louis, Mo.; Great Falls, Mont.; Lincoln, Nebr.; Brooklyn, N. Y.; Raleigh, N. C.; Cincinnati, Ohio; Cleveland, Ohio; Portland, Oreg.; Philadelphia, Pa.; Providence, R. I.; Nashville, Tenn.; Austin, Tex.; Dallas, Tex.; Galveston, Tex.; Richmond, Va.; Seattle, Wash.; and La Crosse, Wis.

No figures are available as to the volume of traffic induced by the farm-to-table movement, but I am sending you a copy of a public statement issued by the department April 3, 1915, which will give you in a general way an idea of the extent of the farm-to-table business at that time. I am of the opinion that there has been a natural and steady increase in the movement of farm products by parcel post since this statement was issued.

In addition to the circulars referred to, farmers and city purchasers are informed of the rules and regulations by the postmaster, post-office clerks, and city letter carriers; also by the free distribution of a pamphlet entitled "Postal Information," a copy of which is being forwarded. The Third Assistant Postmaster General issues a circular regarding the rates of postage and conditions of mailability, and Farmers' Bulletin No. 611 of the Department of Agriculture has been very widely distributed. Copies of these pamphlets are being sent under separate cover.

With a view to educating the public to the facilities offered by the post-office service and to inducing them to cooperate more fully with the postal authorities, the Official Postal Guide, which was formerly sold at $3.50, is being sold this year at 75 cents, and an abridged Guide may be obtained for 15 cents. A copy of the Guide for 1916 is being forwarded separately.

When the parcel post was first established the rate of postage for the first zone was 5 cents for the first pound and 3 cents for each additional pound; it is now 5 cents for the first pound and 1 cent for each additional pound. For the second zone the rate was 6 cents for the first pound and 4 cents for each additional pound; it is now 5 cents for the first pound and 1 cent for each additional pound. The rate for the third zone was 7 cents for the first pound and 5 cents for each additional pound; it is now 6 cents for the first pound and 2 cents for each additional pound. The rate for the fourth zone was 8 cents for the first pound and 6 cents for each additional pound; it is now 7 cents for the first pound and 4 cents for each additional pound. The rate for the fifth zone was 9 cents for the first pound and 7 cents for each additional pound; it is now 8 cents for the first pound and 6 cents for each additional pound. The rate for the sixth zone was 10 cents for the first pound and 9 cents for each additional pound; it is now 9 cents for the first pound and 8 cents for each additional pound. The rate for the seventh zone was 11 cents for the first pound and 10 cents for each additional pound; this rate has not been changed. The rate for the eighth zone was 12 cents for the first pound and 12 cents for each additional pound; this rate has not been changed.

The principal reductions in rates were made effective August 15, 1913, and January 1, 1914.

OTHER POSTAL REFORMS AND ACHIEVEMENTS UNDER THE PRESENT ADMINISTRATION.

In the words of President Wilson, "The post office is the conspicuous gauge and standard of what the Government is doing for the people and how it is doing it." Since March, 1913, this gauge and standard has been raised higher than ever before. Efficient postal service everywhere, equal service for everybody, and the elimination of "pull," privilege, and waste have been our aim. The following are some the more important postal achievements under the present administration:

POSTAL SAVINGS.

The number of postal savings depositors has increased from 310,000 at the beginning of March, 1913, to 603,000 at the end of June, 1916, while the amount deposited has increased during the same period from $30,000,000 to $86,000,000. The gain of nearly 50 per cent in the per capita deposit is convincing evidence of the prosperity of the working people of this country, who are the principal patrons of postal savings banks. It is also noteworthy that 59 per cent of the total number of depositors are foreign born, and that they own 72 per cent of the total savings deposited. This indicates growing confidence on their part in American institutions. Many of these people formerly were patrons of foreign postal savings systems. A recent act of Congress, recommended by Postmaster General Burleson, raises the limit of deposit by any one person from $500 to $1,000, exclusive of accumulated interest. This immediately resulted in a pronounced increased in deposits. It is estimated that the $500 limit placed in the original postal savings law of 1910 turned away as much money as was accepted. The Postal Savings System as a whole has been brought to a self-sustaining basis and for the past three years has yielded a substantial profit.

MONEY ORDERS.

Postal money orders have been made payable at any post office in the United States, thus adding materially to the convenience of many thousands of postal patrons. Formerly they were payable only at the post office upon which drawn.

CITY MAIL DELIVERY.

The delivery of mail in cities has been extended to over 5,000,000 additional patrons of post offices, including 243 cities which heretofore had never had mail delivery. At six of the larger cities Government-owned automobiles have been in operation for the past year in the delivery and collection of mail in place of contract machines, thus providing flexibility of service during emergencies.

MAIL TRANSPORTATION.

Mail transportation has been increased on 6,248 miles of railroad and 421,158 miles on domestic steamboats. To give mail service to towns and villages not located upon railroads, 1,811 star routes have been put in operation.

FOREIGN MAIL SERVICE.

The betterment of the Postal Service with South and Central American countries has been given special consideration in view of the close commercial relations existing between the United States and those countries. Parcel-post and money-order conventions, which will greatly improve the facilities of exchange, have recently been negotiated with Brazil and Argentina, the two largest of the South American Republics. The Parcel-Post Service has been extended to five other countries, including China, with its population of more than 400,000,000, and improvements have been made in the service under treaties already existing. The weight of the parcel-post mails dispatched to foreign countries during the fiscal year 1916 increased 87 per cent over that dispatched during the previous year, while the increase to Central and South America was 101 per cent. Six treaties have been concluded, establishing the 2-cent letter rate from the United States to the Bahamas, Barbados, British Honduras, Dutch West Indies, the Leeward Islands, and British Guiana. The Postmaster General is very anxious to secure a 2-cent letter rate throughout the Western Hemisphere, which will materially assist in the development of commerce with Latin American nations, and is sparing no effort in negotiating the necessary treaties to that end.

POSTAL EMPLOYEES.

Salaries of post-office clerks, city and rural carriers, and railway mail clerks have been increased to the aggregate extent of nearly $15,000,000. Since March, 1913, 1,000 new steel mail cars have been placed in service, thus affording greater protection to the lives of postal clerks. The new liability law grants leave with pay to railway mail clerks for injuries sustained while on duty, and provides relief for their relatives or legal representatives in case of death.

CIVIL SERVICE—MERIT AND EFFICIENCY.

At the very inception of this administration not only postal employees but postal officials were given to understand that they would be expected to do a full day's work. Postmasters are required to devote at least eight hours a day to their official duties instead of leaving these responsibilities to subordinates.

Scrupulous observance of the spirit and letter of civil service has been maintained, and an earnest effort made to extend and perfect the system throughout the Postal Service. In making assignments and promotions in the Postal Service the aim has been to eliminate partisanship and recognize merit and efficiency.

GOOD BUSINESS MANAGEMENT.

A total surplus of $12,500,000 has been paid into the Treasury during the present postal administration up to June 30, 1916. This has been accomplished through a more efficient management of the service, and at the same time the Postal Service has been greatly extended and improved, as shown in the above résumé. During the eight years, 1905–1912, an aggregate postal deficit of $74,600,000 was reported.

With assurances of esteem and best wishes, I am,

Sincerely, yours,

A. S. BURLESON.

**Nation Again to be Tested as in Civil War—Disloyalty Active and Must be Crushed, Says President Wilson in Plea for True Americanism.**

## EXTENSION OF REMARKS

OF

# HON. LADISLAS LAZARO,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 15, 1916.*

Mr. LAZARO. Mr. Speaker, under the leave to extend my remarks in the RECORD I include a speech by the President, delivered on Wednesday, June 14, 1916.

The speech is as follows:

SPEECH OF PRES'DENT WILSON.

Mr. Secretary, ladies, and gentlemen, I have not come here this afternoon with the purpose of delivering to you an elaborate address. It seems to me that the day is sufficiently eloquent already with the meaning which it should convey to us. The spectacle of the morning has been a very moving spectacle indeed—an almost unpremeditated outpouring of thousands of sober citizens to manifest their interest in the safety of the country and the sacredness of the flag which is its emblem.

I need not remind you how much sentiment has been poured out in honor of the flag of the United States. Sometimes we have been charged with being a very sentimental people, fond of expressing in general rhetorical phrases prnciples not sufficiently defined in action, and I dare say there have been times of happy and careless ease in this country when all that it has been necessary to do for the honor of the flag was to put our sentiments into poetic expressions, into the words that for the time being satisfied our hearts.

NOT A DAY OF SENTIMENT.

But this is not a day of sentiment. Sentiment is a propulsive power, but it does not propel in the way that is serviceable to the Nation, unless it have a definite purpose before it. This is not merely a day of sentiment. It is a day of purpose.

It is an eloquent symbol of the unity of our history that upon this monument which commemorates the man who did most to establish the American Union we should have hoisted those stars that have so multiplied since his time, associated with those lines of red and white, which mean all that is pure in our purpose and all that is red in our blood in the service of a Nation whose history has been full of inspiration because of his example.

But Washington was one of the least sentimental men that America has ever produced. The thing that thrills me about Washington is that he is impatient of any sentiment that has not got definite purpose in it. His letters run along the lines of action, not merely along the mere lines of sentiment, and the most inspiring times that this Nation has ever seen have been the times when sentiment had to be translated into action.

NATION AGAIN TO BE TESTED.

Apparently this Nation is again and again and again to be tested, and always tested in the same way. The last supreme test that this Nation went through was the test of the Civil War.

You know how deep that cut. You know what exigent issues of life were at issue in that struggle. You know how two great sections of this Union seemed to be moving in oposite directions, and for a long time it was questionable whether that flag represented any one united purpose in America. And you know how deep that struggle cut into the sentiments of this people and how there came a whole generation following that great struggle when men's hearts were bitter and sore and memories hurt as well as exalted, and how it seemed as if a rift had come in the hearts of the people of America.

And you know how that ended. While it seemed a time of terror, it has turned out a proof of the validity of our hope. Where are now the divisions of sentiment which cut us asunder at the time of the Civil War? Did you not see the blue and the gray mingle this morning in the procession? Did not you see the sons of a subsequent generation walking together in happy comradeship? Was there any contradiction of feeling or division of sentiment evident there for a moment?

WAR'S WOUNDS HEALED.

Nothing cuts so deep as a civil war, and yet all the wounds of that war have been healed not only, but the very passion of that war seems to have contributed to the strength of national feeling which now moves us as a single body politic.

And yet again the test is applied, my fellow countrymen, a new sort of division of feeling has sprung up amongst us. You know that we are derived in our citizenship from every nation in the world. It is not singular that sentiment should be disturbed by what is going on on the other side of the water, but while sentiment may be disturbed, loyalty ought not to be.

I want to be scrupulously just, my fellow citizens, in assuming the circumstances of this day, and I am sure that you wish with me to deal out with an even hand the praise and the blame of this day of test.

DISLOYAL FEW ARE ACTIVE.

I believe that the vast majority of those men whose lineage is directly derived from the nations now at war are just as loyal to the flag of the United States as any native citizen of this beloved land, but there are some men of that extraction who are not; and they, not only in past months, but at the present time, are doing their best to undermine the influence of the Government of the United States in the interest of matters which are foreign to us and which are not derived from the questions of our own politics.

There is disloyalty active in the United States, and it must be absolutely crushed. It proceeds from a minority, a very small minority, but a very active and subtle minority. It works underground, but it also shows its ugly head where we can see it; and there are those at this moment who are trying to levy a species of political blackmail, saying, "Do what we wish in the interest of foreign sentiment or we will wreak our vengeance at the polls."

That is the sort of thing against which the American Nation will turn with a might and triumph of sentiment which will teach these gentlemen once for all that loyalty to this flag is the first test of tolerance in the United States.

PROBLEM OF DAILY LIFE.

That is the lesson that I have come to remind you of on this day—no mere sentiment. It runs into your daily life and conversation. Are you going yourselves, individually and collectively, to see to it that no man is tolerated who does not do honor to that flag?

It is not a matter of force. It is not a matter, that is to say, of physical force. It is a matter of a greater force than that which is physical. It is a matter of spiritual force. It is to be achieved as we think, as we purpose, as we believe, and when the world finally learns that America is indivisible, then the world will learn how truly and profoundly great and powerful America is.

TRUSTEE FOR THE NATION.

I realize personally, my fellow citizens, that peculiar significance of the flag of the United States at this time, because there was a day not many years ago when, although I knew what that flag stood for, it had not penetrated my whole consciousness as it has now.

If you could have gone with me through the space of the last two years, and could have felt the subtle impact of intrigue and sedition and have realized with me that those to whom you have intrusted authority are trustees, not only of the power, but of the very spirit and purpose of the United States, you would realize with me the solemnity with which I look upon that sublime symbol of our unity and power.

I want you to share that consciousness with me. I want you to realize that in what I am saying I am merely your spokesman, merely trying to interpret your thoughts, merely trying to put into inadequate words the purpose that is in your hearts. I regard this day as a day of rededication to all the ideals of the United States.

I took the liberty a few weeks ago to ask our fellow citizens all over the United States to gather together in celebration of this day, the anniversary of the adoption of our present flag as the emblem of the Nation. I had no legal right to declare it a holiday, I had no legal right to ask for the cessation of business, but when you read in the papers to-morrow morning I think you will see that authority was not necessary; that the people of the country were waiting for an opportunity to cease their ordinary business and gather together in united demonstration of their feeling as a Nation.

CONTRAST TO INAUGURAL PARADE.

It was a very happy thought that led the committee of gentlemen who had charge of the demonstration of the forenoon to choose the 14th of June for the parade which most of us have witnessed. It is a tiresome thing, my fellow citizens, to stand for hours and see a parade go by, but I want to take you into this secret: It was not half as tiresome as the inauguration parade.

The inauguration parade is a very interesting thing, but it is painfully interesting to the man who is being inaugurated, be-

cause there then lie ahead of him the four years of responsibility whose horoscope can not be cast by any man.

But to-day was interesting, because the inauguration parade of the day of my inauguration is more than three years gone by. I have gone through deep waters with you in the meantime.

IN NO MAN'S HONOR.

This parade was not a demonstration in honor of any man. It was an outpouring of people to demonstrate a great national sentiment. I was not the object of it. I was one citizen among millions whose heart beat in unison with it.

I felt caught up and buoyed along by the great stream of human purpose which seemed to flow there in front of me by the stand by the White House, and I shall go away from this meeting as I came away from that parade, with all the deepest purposes of my heart renewed, and as I see the winds lovingly unfold the beautiful lines of our great flag I shall seem to see a hand pointing the way of duty, no matter how hard, no matter how long, which we shall tread while we vindicate the glory and honor of the United States.

---

**Joseph A. Goulden.**

## SPEECH
OF
## HON. JOHN J. FITZGERALD,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Sunday, January 23, 1916.*

The House had under consideration the following resolution (H. Res. 101):

*Resolved*, That the business of the House be now suspended, that opportunity be given for tribute to the memory of Hon. JOSEPH A. GOULDEN, late a Member of this House from the State of New York.

*Resolved*, That the Clerk communicate these resolutions to the Senate.

*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased.

*Resolved*, That at the conclusion of to-day's proceedings the House, as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, do stand adjourned.

Mr. FITZGERALD. Mr. Speaker, it is an ancient usage of the House to pay formal tribute to the life, character, and public services of its deceased Members. The custom appeals strongly to Members. Public business is temporarily suspended so that those intimately associated and acquainted with the recently departed may make a permanent record of the virtues possessed and the services rendered by men in the public service, who too frequently are quickly forgotten in the press of everyday affairs.

We meet to-day to commemorate the memory and to review the services of one of the most lovable of men who ever served in this House. Born 71 years ago in Adams County, Pa., of sturdy Dutch ancestry, Col. GOULDEN possessed the virility of his hardy ancestors and their many virtues which so endeared him to his associates. During the Civil War he served the Union cause for two years, and from his experiences during that time was strongly inclined to all movements for the amelioration of the sufferings of the unfortunate in different spheres of life. He took a keen interest in reformatory work. His kindly and genial character was of that buoyant and optimistic nature that induced him to aid to correct the modes of life of those who unhappily had transgressed the law. Such work was highly congenial since it tended to assuage the griefs of those intimately related to the transgressor while affording him the opportunity to begin life anew with hope of a brighter and happier future and the aid and encouragement of kind and generous hearts. Such characteristics fitted Col. GOULDEN admirably for service on the board of managers of the State Reformatory at Morganza, Pa., where he rendered services of considerable value, although not of a showy kind.

About 25 years ago Col. GOULDEN settled permanently in New York City. His high character, his valuable equipment, and his sympathetic nature rapidly won him hosts of friends, and his abilities were speedily utilized for the benefit of the community. For 10 years he served as a member of the board of education, devoting his energies and his time unselfishly and unstintingly to the important duties of that position.

Perhaps the services rendered while upon that board and those as trustee of the Soldiers' Home at Bath, N. Y., which position he occupied for many years, were those which he himself prized most highly.

Such activities and his philanthropic nature influenced to a marked degree the matters in which he was most interested during his service in the House of Representatives. At the very beginning of his service he commenced to study the school system of the District of Columbia. It was then that the vast information acquired during his connection with the school system in New York City became of peculiar value. His interest never lagged, and he devoted himself assiduously to the important and difficult task of perfecting the school system in the District. It was his ambition to have it the model system of the United States, so that other communities might fashion their systems to correspond with it. His interest was not confined to the system itself. He sturdily advocated the cause of the personnel and probably had a wider acquaintance among those engaged in teaching in the Capital than any other Member of the House, and he was universally regarded as their warm friend and champion.

Not alone to the school system did he confine his activities, but he watched sharply all legislation affecting eleemosynary and philanthropic institutions and their inmates, and was ever ready to contribute from his broad experience and wide knowledge information and suggestions of a practical and helpful nature.

It was to be expected that service in the Civil War and as a trustee of the Soldiers' Home would incline him toward legislation to aid his former comrades. His large heart beat rapidly in sympathy with the survivors of that conflict with whom time had dealt harshly, so that he was known as "the soldiers' friend," and labored unceasingly to better their condition and to lighten the burdens of their declining years.

Col. GOULDEN was a man of strong religious beliefs. He made no ostentatious display of virtue, but in his simple, unaffected manner of life he exemplified in a striking manner how a good man should live.

Serving with him for more than 10 years, enjoying an intimate acquaintanceship, I had learned to know him thoroughly and to respect, to admire, and to love him dearly as a friend. His sudden death was a shock to those who knew him. Few men suspected his age. He was so active, so alert mentally, so well preserved, so thoroughly up to date that he readily passed as a much younger man.

His services in the House were not spectacular. He was not so constituted as to seek continually public applause or notoriety. His work was along quiet lines and not well known outside of the circles especially interested; but those who knew him and had knowledge of his activities respected his industry, his zeal, his studiousness, and his persistency. He rendered services of considerable value to the metropolis which he, in part, represented, and which are little known to the majority of the people whom he so faithfully served for years. His work was accurately appraised, however, and thoroughly appreciated by those with whom he was officially associated. He was admired for those manly and virile virtues which he so markedly possessed; he was respected as a good man alone can be esteemed. His departure was keenly felt and deeply regretted by everyone.

Mr. Speaker, it is a matter of regret that the pressure of a busy session precludes me from preparing so comprehensive a review of his career and so adequate a tribute to his character as the services of Col. GOULDEN deserve and as my friendship for him prompts. Others will do so, however, and perpetuate his many admirable characteristics. I can simply join with my colleagues in placing here at this time a fragrant blossom to his memory.

The world is better because of such a life; our work will be the better performed by the inspiration of the memory of his virtues and his example.

---

**Record of the Democratic Party's Inefficiency.**

## EXTENSION OF REMARKS
OF
## HON. GEORGE R. SMITH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

THE NECESSITY FOR POLITICAL PARTIES.

Mr. SMITH of Minnesota. Mr. Speaker, the will of the people in a democracy is expressed and executed through a political party. Our Constitution, by separating the executive, legislative, and judicial branches of the Government, made it necessary to have some process by which these separate branches could be made to work together, especially the executive and the legislative. Therefore, in order to coordinate the legislative

and executive branches of the Government as well as to give the people an opportunity to express their will, political parties were formed.

Washington, as well as other statesmen of his day, was opposed to parties and did what he could to prevent their formation. During the ratification campaign men divided into two groups. Those favoring a Federal government under the Constitution called themselves Federalists; those attached to a government by the States were known as anti-Federalists. Alexander Hamilton and John Adams were the leaders of the Federalists; Thomas Jefferson stood in the same relation to the anti-Federalists. Washington looked with alarm upon the formation of these parties and tried to nip them in the bud by bringing Hamilton and Jefferson into his cabinet. This experiment brought contention into his cabinet and demonstrated that something was necessary to make the different branches of the Government work together.

The administration of John Adams, with Jefferson as Vice President, served to further emphasize this fact. However, Washington, in his latter years, was a strong party man, as he became convinced that he could only carry on his administration successfully by having men of like political opinions about him.

Furthermore, since the beginning of our Government two political parties have existed, though at times their identity was not easily discoverable. Intermingled with the two stronger ones there has been a constant rise and fall of lesser parties, the final result being the establishment of the Republican and Democratic Parties of to-day.

The two-party system of government has been with us from the start; it grew and became dominant in the face of strong opposition, because of its close association with democracy.

In a free country differences of opinion on great and vital questions are sure to arise, and as they do men on both sides will put aside for the time being their differences on questions of lesser importance. In this way democracy has come to recognize, as the normal system of government, the party system, based on the formal division of the people into political groups, each of which bears a party name.

DEMOCRATIC RECORD OF INEFFICIENCY.

The party in power, which in the present case is the Democratic Party, is charged with the duty of upholding the Constitution and executing the laws; of protecting the lives and property of American citizens at home and abroad; of protecting American industries against foreign cheap labor; of protecting the American workingmen, women, and children against unjust exploitation; of protecting the natural resources of the country against private monopoly and against being left to go to waste; of protecting the National Treasury against the expenditure of public funds recklessly and dishonestly; of establishing military, industrial, and "social preparedness" which will increase American efficiency and enable the United States to perform its just share of the work of the world. The foregoing responsibilities and duties are enforced under our system of party government by the presence of a rival party, whose duty it is to watch the conduct of the party in office, to expose its defects, to criticize its policies, and, in case of failure to carry out its pledges to the people, to displace it.

Therefore, as a member of the opposition party, I feel compelled from a sense of duty, not only to my party but to my country, to expose the defects of this administration, to criticize its policy where to me criticism seems just, and to point out wherein it has failed to express and execute the will of the people as per its preelection promises.

Mr. Speaker, I believe in rendering to Cæsar the things that are Cæsar's. The Democratic Party should receive full credit for any good it has accomplished during its tenure of office. I would be the last one to detract from its record of achievements, for undoubtedly it has to its credit the enactment of a few wise and beneficial laws, of which the country will be sufficiently informed by the adherents of its own party. Nevertheless, I feel that the acknowledgment of this fact is due an administration which has been confronted with so many difficult problems before I undertake to criticize it for its shortcomings, which are many, and which are bound to have a far-reaching, injurious effect on the future welfare of this Nation.

No administration in the history of the Government, except it be that of Andrew Johnson's, has made such a dismal failure of conducting the affairs of the Government as the present. One serious blunder after another has marked its course from the passage of the Underwood tariff law to the enactment of the eight-hour law.

The most discouraging thing about the whole affair is the willful failure of the Democrats to see the injurious effect of their legislation and official acts. The Democratic Party, true to its free-trade policy, in national convention assembled, unreservedly indorsed the Underwood tariff law as truly exemplifying its economic policy, notwithstanding the fact that from the date of the adoption of the Underwood law to the beginning of the war in Europe this law succeeded in closing down a number of industrial plants, and such as it did not close down it put on half time or less. It threw out of employment nearly 5,000,000 wage earners; converted a Treasury balance of several millions of dollars into a constantly increasing deficit; in putting out of service over 150,000 freight cars; in compelling railroads to abandon all improvements and extensions and to apply to the Government for leave to increase their rates so as to meet their operating expenses, though the same had been decreased by the adoption of severe measures of economy. The indorsement of such a law conclusively demonstrates that the Democratic Party is blindly and unalterably attached to the principle of free trade. Such protection as it has granted in this Congress is a matter of political expediency to catch votes. During the operation of the Underwood law imports have constantly increased in the face of the fact that intercourse with foreign countries has to a great extent ceased by reason of the war, while revenues, which are sadly needed to replenish our Treasury, have been greatly reduced.

For example, in 1916, our imports amounted to $2,197,883,510, as against the average imports for the 10 years prior to 1914 of $1,382,629,343, an increase of nearly 100 per cent. But our Democratic friends claim that was on account of the European war. In answer to this contention, I call their attention to the fact that from the date the Underwood law took effect, on October 3, 1913, to August 1, 1914, when the war in Europe broke out, a period of 10 months, our imports increased over the previous corresponding period by $101,977,779. Furthermore, despite the fact that imports have been steadily increasing in volume and value under the Democratic law, the tariff revenues have been steadily decreasing by reason of the actual loss of "dutiable imports," which now amount to only 30 per cent of the total imports. To meet the loss of revenue occasioned by the enactment of the Democratic tariff, the Wilson administration has had to resort to a stamp tax, or war tax, an income tax, a munition tax, and an inheritance tax, which deprives the States of the full benefit of the revenue derived from inheritances.

Every known source of revenue, "and this too in a time of peace and when our imports have more than doubled," has been "tapped" to meet the ordinary expenses of the Government, which were amply provided for under "Republican policies at the customhouse."

What more is needed to convince the interested citizen that the Underwood Act is a failure as a revenue producer; if so, what becomes of the Democratic pretensions that they believe in a tariff sufficient in amount to provide ample revenue for the operation of the Government? If they honestly believed in this plank of their platform they would not have indorsed the Underwood Tariff Act. It is evident the Democratic Party does not believe any such thing. Free trade is the only fundamental tariff principle that the Democratic Party believes in. The Underwood law has made a free-trade country of the United States, while practically all the rest of the world has adopted the principle of protection. Not only has the Democratic tariff law proven to be a failure as a revenue producer, but it has opened our ports to "enormous importation of foreign products" which will come into competition with "domestic production," and thus deprive our business institutions and wage earners of the benefit of our own "market."

Free trade necessarily tends to lower the standard of wages and decrease the amount of work that there is for labor to do. Under free trade our laborers and our business institutions are brought into competition with the laborers and industrial firms of the world.

Is the American laboring man willing to work, or, if willing, would it be possible for him to sustain his family on 30 cents a day, the average wage now being paid to a Japanese laboring man, to say nothing of the wage that Japanese women and children work for? The product of this 30-cents-a-day man is now being sold, under a free-trade policy, in great quantities in our market. Do American labor and capital wish such a state of affairs to continue?

Since this law has made it possible for immense quantities of foreign goods to reach our market when the war has "created a wall" higher than any that could be built by the tariff, will it not inevitably follow when the war stops and millions of men are turned from consumers into producers of foods and

manufactures, at low wages and under starvation conditions, that foreign products will come in greatly increased quantities to compete in our markets with goods manufactured under American conditions?

To ward off such a calamity the Underwood law should be replaced by an intelligent tariff act combining the principles of protection and revenue. The past performances of the Democratic Party conclusively show that it has no inclination to take this necessary step, and even if it did it lacks the training and foresight necessary to perform such a task. Its preconceived notions of our present necessities are all against such a course. Free traders have no sympathy with a combined revenue and protective measure.

Under the pretext that they are abreast of the times they adopted the Republican tariff-commission idea. This is only a further evidence of their insincerity. They do not believe now that the Tariff Commission is any more necessary than when they abolished the Tariff Commission created by the Republicans. It is simply another preelection campaign trick, like the placing of protection on dyestuffs.

Mr. Bryan says, "A tariff commission pleases a certain element and does no harm; its tendency is to postpone a change in rates." Mr. Bryan has only told us that which we well knew.

The Democrats, like the King of Babylon, who carried all his sensibilities with him though banished to eat grass like an ox, hold fast under all circumstances to their free-trade policy.

PEACE AND PROSPERITY.

Peace and prosperity is the Democratic slogan for 1916. The sound of these words tickle the ear and the purse; they are the stimulants but not the food for thought. Because they are alluring, that is no reason for taking them at face value, as they can be both alluring and deceptive. Such a slogan serves publicity rather than fact, which is their real mission in this instance. It does not logically follow that since industries are running at top speed and that labor is employed at wages higher than ever before that Democratic policies brought about this happy condition. But, on the contrary, this fortunate condition furnishes no proof of the wisdom of Democratic policy or any other policy. It is simply an admitted fact susceptible of examination as to the cause of its existence.

Business was flourishing when the Democrats came into power, but within less than 18 months it was paralyzed; labor was unemployed, imports were rapidly increasing; exports were more rapidly decreasing, and revenues were greatly reduced, and this at a time when peace was reigning throughout the world and our granaries and storehouses filled to the roof with the produce of the farms and the products of the factories and mills.

The surest index to the business of a country is its foreign trade balance. The past two years has netted this country a balance of more than $3,000,000,000. Our margin at the end of another year's war will be more than $5,000,000,000. Since the war began we have loaned to the belligerents $850,000,000 and have bought back the bulk of our securities held by them prior to the beginning of the war. At this rate we will be a credit nation at the end of another year. A glance at the figures will show the enormous increase in our trade balance.

For the year "immediately preceding" the war our trade balance was $613,000,000, as against a trade balance for the year 1916 of $2,197,833,510. This prosperity, great as it is, is but temporary and elusive. It is but the natural result of a fortunate people taking advantage of an unfortunate people. Over two-thirds of the world is engaged in a mighty war, and we are the unwilling beneficiaries of their misfortune. My distinguished colleague Mr. ANDERSON, in a speech delivered in this Chamber on the 11th day of August, 1916, conclusively demonstrated that such prosperity as we now enjoy is the result of the war. He showed by official figures of the Department of Commerce that our exports of war materials for the year just prior to the war amounted to only $346,045,051, while the export of war material for the year just closed has increased to the fabulous sum of $1,910,238,672, or an increase in two years in the export of war material of over a billion and a half of dollars, an amount nearly equal to our trade balance.

Such an abnormal condition may not be wholly a matter of congratulation. This added wealth will bring with it increased obligations as well as economic problems, both national and international, which will require the highest degree of statesmanship to solve. While we have prosperity, it is a long way, under Democratic rule, from being secure. Notwithstanding it came without our seeking, it is none the less our prosperity and should be nurtured and protected first and foremost for the benefit of the American people. Is the present administration able to meet the test? To be or not to be is the absorbing question of the hour.

DEMOCRATIC RECORD OF MISTAKES.

So much for the Democratic tariff and prosperity. Now let us turn our attention for a moment to the administration's record of mistakes. I assure you that when I characterize the acts and omissions of this administration by the term mistakes I am speaking mildly of a subject that deserves to be treated very candidly if not harshly. No such record would be complete without an account of the doings of its titular head, Mr. Wilson. A number of its serious mistakes should be charged to his personal account, as they were made at his dictation and command. What I am about to say has to do solely with Mr. Wilson's official acts. As a citizen and a man, I hold him in the highest esteem and respect. His life is a splendid contribution to our day and age and nothing should be wantonly said against him even in the heat of a campaign. It is only from a deep sense of public duty that I even criticize his official record. Every man who aspires to leadership must expect honest criticism from those who hold different opinions from his.

Judging Mr. Wilson from his official conduct, we at once recognize in him an extraordinary man, possessing a unique mind. On occasions he reminds one of the three flags in a picture portraying the landing of Columbus, hung in the rotunda of the Capitol, all majestically unfurling to a breeze blowing from three different points of the compass at the same time. His ability in certain directions is so extraordinary that it can with the ease and grace of a knight of old make the gravest mistake look like a real achievement. He has been known to take within a short space of time as many as three positions on important questions. He seldom gives a reason for reversing himself. However, he expects his party and his country to keep up with his rotations. You never know what he is going to do next. The safest thing to do is to stand still, for he is quite likely to come back to the place from whence he started. There is no one who knows him but believes that his official conduct is guided by the highest and purest motives, even to the extent, at times, of idealism; but with it all there is an exceptionally human side to his nature, for he will resort, in an endeavor to carry his point, to the most subtle practices.

The only persistent and consistent course that he has pursued is that of dominating Congress and his party. In this he has met with complete success, for he has not only dominated Congress and his party, but he has completely overawed and absorbed them.

He has reduced the legislative branch of our Government from a coordinate position to that of a subordinate. Under his administration, instead of Democratic policies being formulated and carried out by the combined judgment of Democratic Members of Congress and the President, they have been formulated and executed by a single individual. In my judgment, this is a serious mistake, for no one mind possesses as much wisdom as the combined judgment of a number of exceptionally well trained minds working in unison. Besides, it is contrary to the spirit of our democratic institutions, and is likely to lead to serious consequences.

The repeal of the Panama toll act furnishes an apt illustration of the President's method of coercing Congress into passing legislation. In his campaign speeches, he repeatedly indorsed the principle of free tolls, and always added "that a platform pledge was not molasses to catch flies." Notwithstanding these declarations and Democratic platform pledges, he came before Congress in little over a year after making the above statements with the astounding demand for the repeal of the free-toll section of the Panama act. On this occasion, he asserted that it was a matter of indifference whether the construction placed by the American people upon our treaty with Great Britain was right or wrong, and that our acts in reference to free tolls were dishonorable. Not a word of explanation as to the moving cause for his change of position accompanied his demand for its repeal. A large majority of the members of his own party were opposed to the repeal, but he brought their wavering ranks into line by a vigorous waving of the flag. But this is not all.

The President, having resolved to remove Huerta from office, seized upon the incident of Huerta's failure to salute our flag in a particular manner as a pretext to compel Congress to authorize him to use the armed forces of the United States to compel a salute, when his real purpose in seeking such authority was to oust Huerta from office.

And again what a furor was raised over the warning resolution, and not without cause, for the President had reached one of his reversing stations. No one could tell whether he was going to make a complete reversal or plunge the country into war. It had been freely stated that the President had expressed the opinion that if war with Germany hastened peace it might not be a bad thing. Congressman GARDNER, of Massachusetts, was openly counseling the handing to Count Bernstorff his pass-

port and the passing by Congress of a declaration of war against Germany. Mr. GARDNER was not alone in his advocacy of such a policy. Other Members of Congress were doing the same thing, but not so openly, and associations calling themselves "Citizens' League of America" and the allies had been formed in the East. Suffice to say that the President at this junction did completely reverse himself as to his marine policy with such alacrity that Congress was made to bear the odium of his former mistake.

A similar course was pursued by Mr. Wilson when he came to deal with the threatened railroad strike, for having failed to obtain a satisfactory solution of the problem he presented certain recommendations to Congress with the request that they be enacted into law. While it was not a very satisfactory solution of the question, it did cover the whole subject; but the President, yielding to the opposition of the brotherhood to his original program, and true to his accustomed way of handling public questions, fluctuated and urged Congress to pass a bill which omitted four of the six propositions that he originally recommended. Here we see Mr. Wilson in his true light. First he arose to the occasion as a true statesman and took advantage of the crisis to enact legislation which would have tended to prevent similar situations in the future, but meeting opposition he at once surrendered and eliminated everything from his program that would have established a method to care for the interests of the public under a similar situation. Eventually he used the power of his office to pass just enough legislation to avert the strike. This action left the public without any remedy for the future. The result of the final course adopted by the President partially satisfied the railroads and their employees, because it assured to the railroads increased freight rates and to the employees shorter hours and higher wages. But what about the public who have been left exposed to further forced increases in wages and rates and further peremptory demands upon their Congress by their President. It is the people's turn to legislate, and they have plenty of time to think it over between now and November 7.

While it is true that the Republican minority in the Senate could have prevented the passage of the Adamson bill, or any other bill, unless it was amended so as to include all of the President's program, nevertheless they could not force the adoption of such amendments against the opposition of the President in time to avert the strike. Under such circumstances the Republican Senators did not care to assume all the responsibility for permitting a national calamity and contented themselves by merely voting against the bill.

PEACE AT ANY PRICE.

Peace purchased at the expense of duty and the loss of self-respect is like building on quicksand. A national structure erected on such a foundation would soon collapse. At the outbreak of the European war the President issued a proclamation commanding the public to practice neutrality even in thought, but it is generally believed that the President was among the first to violate his own proclamation. If we, as a Nation, had performed the duties and obligations of a neutral country by seeing to it that the rules of international law were impartially enforced and observed, it is more than likely that there would have been no sinking or torpedoing of merchant vessels, no bombarding of unfortified towns nor churches or hospitals; no seizure of United States official mail in transit between different portions of our own country for the purpose of furnishing the British Government with inside information as to our international policy; no seizures under British orders in council of American vessels flying the United States flag; no blacklisting of American business firms; and no raiding of our borders by Mexicans.

Having occupied during this mighty struggle for world power the position of mere onlookers, with now and then offering, in the shape of a legal brief, a protest against vicious encroachment on neutral rights, we have invited rather than discouraged the violation of international law, the disrespect for national authority, and the destruction of American lives and property. Instead of writing classical notes for the edification of those who come after us, Mr. Wilson could have brought the belligerent European nations and the Mexican people to a wholesome respect for neutral rights by adopting as a model Grover Cleveland's Venezuelan note to Great Britain, backed up by the determination that actuated Grover Cleveland at the time he penned this historical document to a friendly power. Unfortunately, there is not a Cleveland, Grant, Lincoln, Jackson, Jefferson, or Washington in command at the White House.

If Mr. Wilson had had the courage to follow the precedents established by this Government in dealing with international matters, he would have maintained for his country during this unfortunate time the honor and respect of the world. As it is, Old Glory is not the protecting shield for our citizens that it once was.

In Mexico, where a few Americans are still trying to guard their property, they are compelled to hide their nationality behind the British flag, for which the Mexicans have a lively respect. By this disguise our American brothers escape insult and loss of life and property. Does any American citizen take comfort out of this exhibition of national decay? If so, we want his picture for the gallery of degenerates.

Mr. Wilson's handling of Mexican affairs is not only a disgrace to Americans but an outrage to the Mexican people. He first destroyed what semblance of government they had, then set up a dictatorship under the bandit Carranza, who immediately smote the hand that "exhorted him to office" by murdering American citizens, not only in Mexico but on American soil. Different treatment could hardly be expected from such a man as Carranza. Furthermore, in the face of this evidence of treachery, our confiding President is now engaged in formulating a peace treaty with his protégé. What change has been wrought in Carranza since he treacherously caused a number of our soldiers to be killed at Carrazal that warrants our Government, through its President, in extending to him "the assurances of our highest consideration" and esteem? If the matters in hand were not so serious, they would be ludicrous. Every thoughtful American citizen, except Mr. Wilson, realizes that the labors of the joint Mexican-American Commission now in session at New London, Conn., are doomed to failure, for the very reason that Carranza, one of the contracting parties, is not the acknowledged head of the Mexican people, or even the leader of all the bandits. Why, the jilted bandit, Villa, to say nothing of Zapata and other lesser chieftains, has still a sufficient following to keep Carranza's army, assisted by 150,000 American troops, busy. This depraved outlaw not only attacked and murdered our citizens on Mexican soil with impunity, but crossed our border and murdered our citizens with the cognizance, if not with the actual assistance of Carranza. Under these circumstances is it not passing strange that Mr. Wilson's Secretary of State should extend to Mr. Carranza the assurances of his highest consideration? What a cordial greeting to the murderer of our soldiers and the civil population of our border villages!

Three years have elapsed since Mr. Wilson announced "that he would vigilantly watch the fortunes of those Americans who can not get away from Mexico," but not once in those three years has he lifted a finger, "except in pious exhortation," to prevent the raping of American women or the killing of American men, women, and children. The bones of our citizens, he so dramatically promised to keep a vigilant watch over, are now strewn from one end of Mexico to the other.

The administration's treatment of those unfortunate Americans who had to remain in Mexico to guard their property is in line with its treatment of the American citizens who took refuge in a certain building in Tampico to save themselves from a bloodthirsty mob. On that occasion the American fleet, which was close at hand, was ordered from Washington to sail away, and, sailing away, left our citizens in the hands of bandits thirsting for their blood. The commanders of German and British ships, seeing the Americans abandoned by their own country, came to their rescue. Was there ever a more perfect spectacle of the noble and the ignoble? It was humane, generous, and brave for the German and British commanders to save our people from destruction; it was ignoble for our Government to desert them at such a time. The administration knew that these people would be slaughtered unless they were rescued. There was never a greater exposure of neglect of a Government to protect its citizens.

We are told by the apologists for the administration's cowardly act that it was done for the sake of peace.

Mr. Speaker and my colleagues, are we not paying too dearly for our make-believe peace? After suffering many humiliations, still there is no peace. Neither can peace be established by pursuing a course so out of touch with the practical side of human nature. The longer this weak, vacillating, and anaemic policy is pursued the more costly it will prove. We are but giving our neighbors a wrong impression of ourselves. For over three years we have been giving the Mexican people such an exhibition of timidity and lack of national purpose that they have come to believe that they are our superiors in the arts of war and peace.

In the name of peace have we not, for the purpose of ousting their President from office, blockaded their ports, collected their revenues, killed a number of their soldiers, furnished arms to first one and then another bandit, set up a bandit as their dictator, sent our fleet and Army against them, and then withdrawn them at the behest of this usurper? Have they not wit-

nessed the abandonment of American men, women, and children to their fate when attacked by a bloodthirsty Mexican mob? Have they not witnessed the rape of American women and the killing of American men, women, and children, both on Mexican and American soil by Carranzists, Villaists, and Zapatistas, without so much as a vigorous protest from the American Government? Have they not witnessed the whole American Army in pursuit of a single bandit? During it all have they not beheld the head of our Government looking on in supreme indifference?

If anything more is needed to earn the contempt of the Mexican people for the United States, it will be supplied by the continuance in office of the present administration.

FIRMNESS VS. TIMIDITY.

Vacillation and weakness encourage encroachment upon established rights. The spineless policy of Mr. Wilson has encouraged other nations to encroach upon our rights. Neutral rights on the high seas under international law have been abrogated by British orders in council, to the extent of making neutrals her unwilling allies. By this course Great Britain has threatened the sovereignty of all neutral countries.

A nation is but a vassal which permits a foreign power to censor both its official and private mail, to blacklist its citizens engaged in business in its own country, to seize its ships sailing under its own flag for the purpose of securing their cargo. The British Government announced last month that it had placed the names of 80 or more persons, firms, and corporations in the United States upon a proscriptive black list and had forbidden all commercial or financial dealings between them and the citizens of Great Britain. This policy not only affects commercial transactions in Great Britain and her dependencies, but applies to domestic transactions as well. American establishments doing business in foreign countries have been notified that the British Government reserves the right to veto any dealings with blacklisted firms. It further provides that additions may be made to the black list on account of enemy, nationality or enemy association of such persons or bodies of persons if it appears to His Majesty expedient to do so.

Banking concerns in the United States with branch agencies or connections in Germany have been blacklisted because of such connection, and even American commercial houses dealing with such banks are liable to be placed on the black list. Under these circumstances bankers in the United States and elsewhere hesitate to advance loans to concerns that are blacklisted. Merchants in other neutral countries have begun to decline to contract for goods of American houses that are under the ban, fearing that they themselves may be barred from trading with Great Britain and her allies.

Furthermore, British officials have seized United States official mail in transit from this country to our foreign representatives in China and elsewhere, supplying the information they secured from an examination of such mail to the British Government for its use in dealing not only with the present war but in dealing with the United States regarding any international questions that may arise in the future between the United States and Great Britain, or between the United States and Japan or China, or any other country with which Great Britain may be allied at the time of the controversy. This information leaked out from private sources, the Government having failed to make the facts known.

And again, by the substitution of the order in council for international law, trade between the United States and Holland and the Scandinavian countries has been prohibited. Not even a pound of flour can be shipped from my city, Minneapolis, one of the greatest flour markets in the world, without first obtaining "letters of assurance" from the British Government. American ships flying the flag of the United States have been seized and their cargo appropriated.

We have Mr. Wilson to thank for our loss of sovereignty. His mild protest when Great Britain threatened our commerce and our mail and our business firms was but notice to it that it might supervise neutral commerce without opposition from us, save the writing of an occasional note as a basis for a monetary claim which could be settled at leisure.

By adopting such a course are we not doing something more than postponing the collection of damages for the destruction of the business of our citizens? Does it not tend to destroy our independence as a Nation? Who knows to what extent this supervision of our affairs may extend; it already extends to our mails, to our business houses, and our commerce. Sweden has not permitted these things to take place without a vigorous protest, and she is a nation of less than six millions of people. Then why should we, a Nation of over a hundred million, hesitate to assert our rights, no matter who is threatening them?

Is it to be marveled at that our protesting notes to foreign nations are looked upon with indifference, often not exciting sufficient interest to elicit a reply? The custom of note writing has become so prevalent in the State Department that any one of a number of subordinate officials is sufficiently acquainted with the form used to prepare one of these notes on short notice.

We are asked what we are going to do about it. There is one thing the American people can do, and that is elect another President and a Congress to sustain him. From the character and history of the Republican Party we have every reason to believe that it will at least preserve the remaining rights of the American people, if it can not retrieve those already surrendered. The Republican Party can be relied upon to put the country in such a state of preparedness as to protect the Nation against such encroachments on their national rights as we have witnessed under the present administration.

The Democratic Party having failed to protect the lives and property of American citizens at home and abroad; to protect American industries against foreign cheap labor; to protect American working men, women, and children against an unjust exploitation; to protect the national resources of the country against private monopoly; to protect the National Treasury against the expenditure of public funds recklessly; and to establish military, industrial, and social preparedness, should be relieved of power.

Billy Kent's party ought to be able to beat a party with a record like that.

---

**Zebulon Baird Vance.**

---

## EXTENSION OF REMARKS

OF

## HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. WEBB. Mr. Speaker, the concurrent resolution now before this House that the statue of Zebulon Baird Vance, which has been placed in Statuary Hall by the State of North Carolina, be accepted by us in the name of the National Government, and that the thanks of Congress be tendered to the State of North Carolina for her contribution to this Hall of Fame, will be adopted, like those offered on the 16th day of April, 1894, at the time of his death, without a dissenting voice.

You are all familiar with the history of Statuary Hall, and how, in 1869, when it was no longer needed as a meeting place for the House of Representatives, on account of the Capitol having been enlarged and the present Hall, where we are now meeting, provided, it was set apart as a sacred spot, hallowed by the many historical events that had transpired within its walls during the eventful years that it had been used as the meeting place of this House, in which each State was invited to place statues in marble or bronze of not exceeding two of her illustrious deceased who had become illustrious on account of their heroic renown or because of distinguished civil or military services.

North Carolina has had many illustrious sons, whose lives and characters have been such as to entitle them to stand in silent but impressive marble or bronze in that historic hall as the mute representatives of the great men of that State.

The delicate task of choosing from such a long list of those who had devoted their lives to the service of their State and Nation and achieved renown at home and abroad in every line of public endeavor, whether in peace or in war, and by whose wisdom and courage our civilization had been advanced, may, in a measure, account for her tardiness in availing herself of the privilege which Congress had accorded her.

But the matter could not be longer put off and the North Carolina General Assembly of 1907 made provision for placing a statue in Statuary Hall, and by legislative enactment, without a dissenting vote, wrote into the law that it should be of Zebulon Baird Vance.

Some may feel inclined to apologize for so long a delay in providing for this statue, but to me there is a compensating assurance that the State, in keeping with its traditional conservatism, has acted wisely. It is a more splendid tribute to his greatness that, 13 years after his death, a succeeding generation should have spoken through their representatives in the general assembly of that State with one voice and selected him as the one to be thus honored.

I have read the splendid eulogies which were delivered in both Houses of Congress at the time of his death, by those with whom he had associated in his public duties. These were his daily companions, who, by personal contact, had felt the warmth of his genial nature and become bound to him by ties of affection. They might have been warped in their judgment by the sorrow of the occasion and blinded to his faults by their kindly affection for him. During these 22 years his life work has been measured, and has stood the test of time. The judgment rendered on that sad occasion has met the unanimous approval of the people of his State.

I feel a special pride in his selection, and in the splendid statue that has been presented to us by the State of North Carolina, which pride the people of the district I have the honor to represent in this House share with me, on account of the fact that Zebulon Baird Vance lived in my district, in the thriving commercial city of Charlotte, N. C., during a part of his most active public career.

He was born in Buncombe County, in an adjoining district, the 13th day of May, 1830, in the midst of the most beautiful mountain scenery that is to be found anywhere, surrounded on every hand by the lofty mountain peaks, indicative of strength, stability, and grandeur in nature, and close by the crystal, rippling waters of the French Broad River as it came fresh from the pure mountain springs, giving out nature's lullaby as it swiftly found its way over its rocky bottom on toward the sea.

These were the environments which nature surrounded him with during the impressionable days of his youth. When we think of his strong, well-developed physical form which is faithfully portrayed to us in the splendid bronze statue we are to-day receiving, and of the manly traits of character, softened by a kindly affection and brotherly love for his fellow man, we have no difficulty in finding, without stopping to theorize as to cause and effect, that his life was typical of his early natural environments.

Unfortunately for me on this occasion I can not portray his life and character to you as one who lived in close contact and with intimate personal knowledge of his active public career, and draw upon a rich store of personal experiences and reminiscences to impress their characteristics upon you. I was but a young man when he died and only knew him in his declining years. As a small boy I only knew him as a small boy knows his people's hero. I saw him on a number of public occasions, and his personality left a lasting impression upon me. When he spoke in a community all the boys, as well as all the men, went to hear him. Everybody honored him, loved him, and referred to him as Zeb Vance.

The history of his long, brilliant, and useful career has been ably presented, not only on this occasion, but also on the occasion of his death by those who lived more nearly in his time, and more ably than I could do it, and I shall not now attempt to review it.

Beginning with the year he completed his education he was successively elected county attorney, State legislator, Representative in the Thirty-fifth and Thirty-sixth Congresses, served as captain and colonel in the Confederate Army, governor of North Carolina for three terms, elected to the United States Senate in 1876 but denied a seat for political disabilities growing out of the war; again elected United States Senator in 1879 and succeeded himself in this high office until his death in 1894. These are the public offices which during his 60 years of almost continuous public life he was called to fill. That he did his duty and filled each worthily is proven by his successive promotions. A grateful people knew no greater honor to bestow upon him.

Vance was endowed by nature with the traits of a great leader. He was able, bold, and fearless; had a high conception of duty; was a diligent student of public questions; and, through it all, had an abiding faith in and love for his fellow man. His success was not attained by any devious route, or by resort to the methods of the political trickster. His high moral character and love of truth and honor guided him in a straight and safe course through the many trying events of his life.

But many men might possess the same noble characteristics without ever receiving such universal recognition and appreciation. The almost unanimous recognition of his greatness in his own State may have been due in part to the fact that he lived through a very trying period in the history of North Carolina, when the public pulse of the State was throbbing with emotion and every public service recounted. I am, however, inclined to the belief that it was more due to his great power as a public speaker. His arguments were strong and well fortified by facts and illustrations and well seasoned by timely and well-pointed anecdotes.

His adversaries were held in check by the strength of his argument and routed by the keenness of his wit and ridicule. But his greatest strength lay in his ability to translate his arguments and present his facts in the language that was easily understood by his hearers. The most unlettered portion of his audience carried home some fact which he had embedded there. If nothing else, the hearer could recount some well-pointed joke that Vance had told which illustrated his position upon some public question.

But why continue to speak of the elements of his character that made him great? Man's effort to analyze a truly great man must fall far short. It is an impossible task.

Zebulon Baird Vance is great in the minds of all North Carolinians and worthy of the prominent place his statue occupies in Statuary Hall, not because of his ability, character, his power to sway audiences, his love for his fellow man, nor any of the other attributes spoken of by me, but because of all these and others I have not mentioned blended into one and translated by his noble life into action which, guided by his faith in God, has resulted in good to his fellow man, which has led them into a higher civilization and a more perfect state.

Measured by the results of his active life, he is great, and we but honor this Nation in accepting with our thanks this statue, well done by an eminent artist and presented by the loving hands of the State he helped to build up.

May many youths of this generation who pause and look upon this statue of Vance as it stands in Statuary Hall be inspired by his noble life to emulate his example.

---

## Mr. Bryan's St. Louis Speech.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. GOODWIN,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 16, 1916.*

Mr. GOODWIN of Arkansas. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech made on yesterday before the Democratic national convention at St. Louis by the Hon. William Jennings Bryan.

Mr. Bryan has been declared politically dead by our Republican friends many times during the past 20 years, and especially has he been declared many times within the last few months to be politically extinct, but from the tremendous ovation accorded to him yesterday by the spectators and by the convention as well, Mr. Bryan seems still to be close to the heartbeats of the American people and continues to cherish their honor and esteem. I take pleasure in submitting herewith the speech made by Mr. Bryan, together with comment made thereon by the St. Louis Post-Dispatch of June 16.

[From the St. Louis Post-Dispatch, June 16.]

MR. BRYAN'S ST. LOUIS SPEECH.

The appearance of William J. Bryan in the hall at the national convention last night was the signal for a spontaneous and hearty greeting from the Democrats that did not subside until the Nebraskan had been escorted to the platform for a speech. Bryan was late getting into the hall because of the congestion at the doors; but scarcely had he appeared at the back of the press box when the demonstration began.

As his familiar figure moved forward the cheers redoubled. The galleries began to cry, "Bryan!" "Bryan!" and the degelates and alternates took it up, many springing to their feet and waving hats and canes as they yelled.

From all parts of the hall came cries of "Speech!" Chairman JAMES restored order for the opening prayer, but scarcely had the amen been uttered when there were renewed cries of "Bryan!" Chairman JAMES recognized Senator THOMPSON, of Kansas, who moved that the rules be suspended and Mr. Bryan be invited to speak. The motion was wildly cheered, and a roar of "Aye!" signified that it was carried, although there were scattering "noes."

The crowd continued cheering as a special committee, headed by Senator KERN, of Indiana, escorted the Nebraskan to the stand. It was several minutes before the clamor could be quieted. His speech lasted 45 minutes.

TEXT OF MR. BRYAN'S ADDRESS.

Mr. Chairman, delegates, ladies, and gentlemen, I appreciate the honor that this convention does me in permitting me to say a word to the delegates and guests assembled. Every Democratic national convention is to me a love feast. It gives me an opportunity to meet and renew acquaintance with the men with whom I have been intimately associated in politics for now more than 20 years. And appearing before you to-night my mind runs back to the campaign of 1896 and to the faces indelibly impressed upon my memory in those trying times. It was then that I became acquainted with the leaders of that mighty host of Democracy, whose support in three campaigns I value more than I could value any office in the world.

It was then that I learned to know the distinguished gentleman who presided as temporary chairman of this convention. He gave to that campaign the youthful vigor of a man of promise, and it has been a joy to me to continue that acquaintance so happily begun.

I learned to know 20 years ago the distinguished gentleman who presides as the permanent chairman of the convention. He was then entering public life as a young man, and his is one of the faces I shall never forget as I saw it in that convention at Chicago.

It was 20 years ago that I learned to appreciate the wisdom and the statesmanship of the distinguished Senator from Missouri, who is the chairman of your Resolutions Committee.

And so I might go on enumerating the names of these men with whom I was then associated, whose acquaintance I have prized, and whose confidence has awakened a sense of deepest gratitude in my heart.

After 16 years of struggle together we won a notable victory. After 16 years of waiting our party entered the White House, and, fortunately, we won the Senate and the House at the same time. Our party became responsible for the administration of the National Government. It was in sole control of executive and legislative departments, and now we come, after three years of labor, to take account of our stock, to make our plans for the future, and to submit to the American people the claims of our party to continued confidence.

If I have not mistaken the sentiment of this convention it is different from the convention that I recently attended in a neighboring city. Our people meet to-day feeling that they have earned and should have the approval of the voters.

Whatever differences of opinion may exist, or may have existed, as to particular measures, or particular acts, we are here to begin the fight of 1916, a united party in every State in the Union, ready for battle.

The Democratic Party encourages independent thought among its members. If they all thought alike it would be proof conclusive that they did not think at all.

Parties exist because parties emphasize the points of difference. Harmony exists in parties because the members emphasize the points of agreement rather than the points of difference. And, as in this Nation, the things that the whole people hold in common are more numerous and more important than the things on which they differ, so in parties men act together because the things upon which they agree are more numerous or more important than the things upon which they differ. To-day those who stand for the Democratic Party are able to go before this Nation and not only give a reason for the faith that is in them, but they can defend the administration's claims to the confidence of the people.

In dealing with the domestic problems, our President, our Senate, and our House have joined together in giving the country a program of constructive legislation that has no parallel in all the history of this country.

You may take all the administrations from the beginning of our Republic to the beginning of this administration and you will not find as many laws written upon the statute books, of great importance to the people as you will find written in the last three years by Woodrow Wilson and a Democratic Congress.

We found the Republican Party in power, with a tariff law written by the beneficiaries of protection. The President called Congress together as soon as it could be assembled. He presented the pledge of our platform to reduce the tariff, and the members of our party, cooperating as the President and Congress have seldom cooperated before, redeemed the pledge and wrote upon the statute books the best tariff law we have had in this country in 50 years.

It has taken away the power of the trusts to exploit the American people. It has done justice to the consumers of the country, without doing injustice to any of the producers who have relied upon the favors granted by the Republican Party. And, as a part of that tariff law, the country now enjoys an income tax that has relieved those who have borne an unfair share of the burden and placed it upon those whose incomes properly justified it, and who have heretofore escaped their share of the expense of the Government.

As soon as the tariff question had been settled the President asked Congress to give consideration to the question of currency reform. For 20 years the Republican Party had advocated currency reform. It had admitted the need of currency reform, but it never had the courage to undertake currency reform.

The Democratic Party, true to its promise and its pledge, prepared a bill, and that bill is now a law, thanks to the courage of a President who was not afraid of Wall Street.

No President since Jackson has had to meet such an unholy combination of the powers of high finance, and even Jackson himself never met the situation better than Woodrow Wilson has met it. We have just commenced to learn what that law means for this Nation. Even before it became a law we learned what it meant to have the White House on the side of the people.

An attempt was being made to create a panic for the purpose of compelling the abandonment of this porposed legislation. When the evidence, as it came in from different sections of the country, was sufficient the Secretary of the Treasury went to the White House—and I want to call your attention to the fact that he went to the White House and not to the kings of Wall Street as Republican secretaries had been in the habit of doing—and after a brief conference with the Executive he gave a statement to the public announcing that, if any community anywhere needed money to tide it over a temporary embarrassment, it need not go to Wall Street, but could come to Washington, that the Government stood for all the people and was ready to protect them.

What was the result? The result was that that proposed panic was nipped in the bud. "It folded its tent like the Arab and silently stole away," and since that time no new panics have been born.

This great piece of legislation—the greatest piece of constructive statesmanship in a generation—has not only broken the hold of Wall Street upon the business of the Nation, but it has broken the grip of Wall Street upon the politics of the United States. For 20 years there had not been an election but what a hundred men in Wall Street could, by the coercion they had in their power, change the result of the election. And one who, like myself, has felt their power, must be pardoned if he rejoices that we have an administration that has broken that power and set a nation free.

That currency law restored to the Government the sovereign right to issue the paper money of the country. The banking institutions had filched that power from the Government, and having learned the value of its use they claimed it as a vested privilege. But the Democratic Party, acting through a Democratic President, a Democratic Senate, and a Democratic House, has restored to the Government the power that had been taken from it. It is one of the victories of this administration.

When the work was completed along this line the President invited Congress to a third task, the task of putting the ax to the root of the tree of private monopoly. The Republican Party and the Progressive Party had talked of regulating monopolies, but instead of regulating them they allowed the men who furnished their campaign funds to regulate the regulators of monopoly, and the trusts grew, and grew, and grew.

But when President Wilson sent his message to Congress he planted himself upon the Democratic doctrine, proclaimed in four campaigns, that a private monopoly is indefensible and intolerable.

Here are three great measures, measures carrying out the promises of a Democratic platform, and these three great measures constitute a record of achievement which the Republican Party dare not attack.

In their indictment of our party they did not dare to mention three of the four measures that embody the economic policy of this administration. Did you see in their platform any denunciation of the currency law? No. They have not the courage to either admit its value or condemn the law. They cowardly evade the issue, but what they can do at Chicago is one thing; what they can do before the country is an entirely different thing.

The electorate before which the Republican Party must now go is not controlled as the convention at Chicago was by the expert representatives of the favor-seeking corporations. They must meet the issue, and if they can not find fault with our currency law they must admit that the Democratic Party that they used to ridicule has both the intelligence and the courage to do what they, either from lack of knowledge or lack of courage, failed to do.

Did they condemn the income tax at Chicago? No; and they will have the people to settle with if they dare go before them and propose to undo what the Democratic Party has done, and put back upon their bended backs the load they carried, and would carry still, if the Republican Party had remained in power. It never would have broken their bondage, but now they are free. They dare not put it back. We challenge them to propose to put it back!

They either did not know how to rid the country of the burden of private monopoly or, if they knew, they did not dare to put their knowledge into effect. Why don't they denounce our antitrust legislation? They must either go before the country and point out the defects of these antitrust laws or they must admit before the voters that our party dared to do what they did not dare to undertake.

These are some of the things that they have not challenged and that they will not challenge.

They talk about the tariff. Yes; but it is a matter of habit. It is momentum that keeps high tariff going. The astronomers tell us that some stars are so far away that if they ceased to shine the world would not find it out for centuries afterwards; so the Republicans had given to the advocacy of a high tariff a momentum that will carry the doctrine on after it is dead as an issue. What we now see is not new power that is added, it is the dying power that was put into it before the people secured tariff reform.

But there is one argument that they used to make that they can make no longer. Banking upon lack of information among their voters, they used to accuse the Democrats of bringing panics when they were in power. They overlooked the fact that of the three panics that have come since the Republican Party came into existence two came under Republican administrations and under circumstances where the Democrats could not possibly be to blame. But, banking on their voters' lack of information, they continued to repeat that stale falsehood year after year. They can not do it any more, for the Democratic Party came into power and all their dismal prophecies have failed.

Why, they said that the Democrats could not devise a low tariff law that would stand in time of peace. God gave us enough time of peace to demonstrate that they were wrong, and then a war came that has demonstrated that even a war can not shake the foundations of the Democratic tariff system.

While our President and our Congress were at work constructing this splendid pyramid of performance a war came that threw upon this administration such burdens as no President has had to bear within the last 50 years; and the Democratic Party, aside from deserving the gratitude of the Nation for its remedial legislation, deserves gratitude also for the manner in which it has dealt with delicate international problems.

We inherited from a Republican administration an insurrection in Mexico. It did not arise under this administration. You will find in the State Department a telegram sent by Huerta to the preceding President, "I have overthrown the Government."

Yes; the Government was overthrown, and this administration has dealt with that situation, and the Republican Party dare not challenge a verdict before the country on the Mexican question.

Your great chairman to-day pointed out that our policy had followed the precedent set by one of the most illustrious of our Presidents, the greatest Republican President, Abraham Lincoln; and he showed also what would have been the result had we yielded to the importunities of interested parties or to the threats of Republican politicians and invaded Mexico for the purpose of intervention.

The President will not lack those who will defend his conduct. Aye, in every home you will find a mother who will thank the President that her boy has not been sent to Mexico to die in the trenches.

We have a few men interested in ranches and a few interested in mines who would use the blood of American soldiers to guarantee profits on their investments in a foreign land. But that is not the sentiment of the American people. The people of this country stand back of Woodrow Wilson in his determination not to intervene in the affairs of Mexico.

Why, my friends, if President Wilson had yielded to the demand of those who clamor for intervention in Mexico, we would no sooner have crossed the line than the same men would have demanded that the soldiers must never come out, for, my friends, annexation is the next step after intervention has been undertaken.

If we invade Mexico, these same men will say, "On to Panama." The men who would seek to make this Government a conquering Nation would destroy all the advantages gained in the half century during which we have striven to cultivate the confidence of countries in Central and South America.

But, my friends, the President not only has had to deal with war to the south of us, but war to the east of us. The whole world is in the throes of a war without a precedent and without a parallel. Three million men have already died—more than the population of 1 State, if our 48 States were equal in population—and more men have been wounded than there are people living in any State in this Union. The new debts that have been contracted during this war now amount to as much as all the debts that have come down from all the wars of all past history to the beginning of the present conflict.

Five hundred years from now little children will be born into the world, their necks under a yoke of debt placed upon posterity by this generation. There have been meetings held in this country at which men of prominence have urged this Government to participate in this war. My friends, I have differed from our President as to some of the

methods employed by him to prevent war, but I join the rest of the Nation in gratitude that at a time like this we have a President who is trying to keep us out of this war.

If this convention had done nothing more, it has justified its assembling by the speech made in the presence of this audience yesterday by the distinguished gentleman from New York who presided as your temporary chairman. He has piled up precedent upon precedent, and all the Democrats of the Nation have to do now in order to answer any criticism of the President's refusal to go to war is to take the precedents cited by him and ask, as he did, What did the former Chief Executives of this country do; did they go to war? No; they settled the disputes by negotiation, as our President is trying to do in the present crisis.

My friends, we do not know when it will be possible to bring this war to a close, but we do know that ours, the greatest neutral Nation, is the one to which the world is looking to act as mediator when the time for mediation comes.

I appeal to the sense of justice of the American people; when in God's time the honor of mediating shall fall to this Nation, is it fair that the honor shall fall to one who has not borne the burden in the heat of the day? Is not the President of the United States, who for two years has borne a burden such as few men on earth have ever been called upon to carry—if he had been able to protect the neutrality of this Nation and to save it from participation in this awful war—should not the honor of being peacemaker come to him and to the party that selected him?

Why does the Republican Party, some of whose leaders have tried to force the President into this war, come now, when their efforts have failed, and ask the honor of being mediator between the contending nations?

We have a record upon which we can appeal to the people for their support, without fear and without blush. I believe the American people, grateful for what this administration has done, grateful that we have peace in this country while war stalks throughout the world, will not be unmindful of the fact that it was a Democratic President, supported by a Democratic Senate and House, who has thus saved the country from the horrors of war.

Who can say what part this Nation is destined to play in the future history of the world? I love my party, not only for what it has done in the past, but for what it must do in the future, as the people's instrument in protecting their rights and guarding their interests. When the day comes for the world's peace to be restored and for the treaties to be written that will guard against future wars, what administration is more worthy of the honor than the administration that has given to three-quarters of the world a treaty plan that makes war a remote possibility between us and nearly all the principal nations of the earth?

I believe that there is now before this country an opportunity such as no other country has ever had since the beginning of time. I believe that God, in His providence, has reserved for the United States the honor and the task of lifting the moral code that governs individuals up to the level of nations and making it a part of the code of all Governments.

There is a picture that has attracted attention wherever it has been exhibited—the picture of Christ before Pilate. Pilate represented the power of the Roman Government, and back of him were the legions of Rome. Before Pilate, helpless, unarmed, stood the Apostle of Love. Force triumphed; they nailed him to the tree, and those who stood around mocked and jeered and said, "He is dead!" But that, instead of being the end, was only the beginning. In a few centuries the power of Cæsar was gone and his legions forgotten; but the power of Christ increased until hundreds, yes, thousands of millions have taken His name with reverence upon their lips; millions have been ready to die rather than surrender the faith He put into their hearts. He has become the great fact of history, the growing figure of all time. To-day Christ and Pilate again stand face to face—Force and Love are again striving for mastery and dominion. The Old World represents force. It built its hope of peace on fear and threats of violence. Each nation attempted to terrorize other nations into peace, and in their efforts they engendered hatreds that ended in war.

If the nations now at war had spent one-tenth as much trying to cultivate friendship as they have spent in cultivating hatred, there would be no war in Europe to-day.

If I understand this Nation's opportunity and this Nation's task, it is to lead the world away from its false philosophy and help it to build its hope of permanent peace on the foundation of love and brotherhood and cooperation.

If this is to be the task of this Nation, what party is more fit to perform the task than the party that preaches the brotherhood of man as next in importance to the fatherhood of God?

I, as a lover of my country, want my country to win this greatest of all prizes. As a Democrat, I want my party to have the honor that will come with the accomplishment of such a task. As a lover of my country and as a Democrat I join you in the endeavor to give to Woodrow Wilson the opportunity to perform this task for the Nation and the world.

## Rural Post Roads.

### SPEECH

OF

### HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, January 24, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 7617) to provide that in order to promote agriculture, afford better facilities for rural transportation and marketing farm products, and encourage the development of a general system of improved highways, the Secretary of Agriculture, on behalf of the United States, shall in certain cases aid the States in the construction, improvement, and maintenance of roads which may be used in the transportation of interstate commerce, military supplies, or postal matter.

Mr. LANGLEY. Mr. Chairman, I feel that, in a sense, I am being vindicated by recent events in this House. Nearly a decade ago I entered upon the advocacy of Federal aid in the construction and maintenance of public highways, and I have been so consistent, insistent, and persistent an advocate of this policy that my Democratic friends in Kentucky, in a spirit of derision, honored me with the sobriquet of "Turnpike John." I confess, Mr. Chairman, that I take considerable pride in that title, for time has rewarded my labors in this field and those who in days of yore ridiculed my efforts have ranged themselves alongside of me and have clamored as loudly as ever I did for that which has been embodied in the recent good-roads act.

It gives me genuine satisfaction to be able to point to the fact that in the Sixty-first and Sixty-second Congresses I introduced bills calling for the establishment in the Department of Agriculture of a bureau of public highways and providing for national aid in the improvement of public roads. I am still better pleased, however—and it is an unselfish pleasure—in that the seed I then sowed promises such excellent fruit.

My thoughts go back to those days when my Democratic colleagues in this House brought the 42-centimeter guns of their legal lore to bear upon my efforts to prove that the scheme of Federal aid in the building of public roads was entirely unconstitutional, notwithstanding the fact that in the early days of the Republic the Government spent something like $16,000,000 in the construction of the Cumberland Road from the waters of the Potomac into the State of Ohio. It is marvelous how their interpretation of the Constitution has changed, for nearly all of them are fairly falling over each other to support a measure which ultimately will involve an expenditure running away up into the millions to aid the States in the building of good roads. Nay, more than that, President Wilson, who has taken the Constitution under his special protection, encourages the enactment of this law, thus guaranteeing its Simon-pure constitutionality from the Democratic point of view, and no doubt he will give it his approval.

Nor have only my Democratic brethren on this floor thus aligned themselves under the humble leadership of "Turnpike John," but the good Democrats "way down in old Kaintuck" have likewise largely reversed their former views and now look rejoicingly forward to the share of this $85,000,000 which will be allotted to the Blue Grass State. Well, Mr. Speaker, after all it is only fools that never change their minds, and so I am glad that Kentucky Democrats have escaped being placed in that class.

Since the formation of our Government there have been those who contended that the Constitution gives no warrant for taking money from the Treasury for the building of public roads. But they were in a minority in the early days of our existence as a Nation, and fortunately they are in a smaller minority at this time. Jefferson, Calhoun, Madison, John Quincy Adams, Webster, Clay, and the immortal Washington, all were advocates of road building. And to their credit be it said they succeeded in getting some favorable legislation to this end, whereas for the last 60 years, until now, Congress has not given a dollar toward the building of a public highway. As far back as 1910, in a speech I made in the House on the 2d day of May of that year, I said:

"The Government has spent millions for the reclamation of the arid lands in the West and is going to spend millions more for the same purpose. It may in the future spend other millions for the drainage of the fertile swamp lands in the South; but here is an opportunity for the reclamation of lands of comparatively little value by reason of their isolation from the markets, by the building of good roads to the railroad and river ports of shipment. These sections are now entitled to first consideration at our hands because thus far they have received practically no benefit from the Federal appropriations.

"In the early history of the Government the importance of good roads for the prosperity of the country was clearly recognized. President Washington, in his third annual message, said:

"The importance of the post office and post road on a plan sufficiently liberal and comprehensive, as they respect the expedition, safety, and facility of communication, is increased by their instrumentality in diffusing a knowledge of the laws and proceedings of the Government, which, while it contributes to the security of the people, serves also to guard them against the effects of misrepresentation and misconception.

"There is a close analogy between the construction of post roads referred to by Washington and the building of good roads as it is now advocated, in that the good roads are as important to-day for the proper administration of the Postal Service as they were in the days of the first President, for the extension and the most effective work of rural free delivery will be aided and expedited to an almost incalculable degree by the establishment of good roads."

The importance of roads was recognized to such an extent in the early days that donations of public lands to various States were coupled with stipulations that in each case a certain percentage of the proceeds of the sale of such lands should be set aside for public-road building. These funds were applied, together with appropriations from Congress, to the construction by the Government of the first and the only great public highway—the Cumberland Road.

In considering the question of Federal aid to road construction, the matter of expense should not be allowed to weigh against it, for the returns in the way of rapid transit of products to markets and the reduced cost of getting these products to their shipping points would many times reimburse the outlay. According to figures furnished by the Department of Agriculture, the cost of haulage per mile over unimproved roads in the United States is on corn, wheat, and hay 19 cents; on tobacco, 20 cents; on potatoes, 22 cents; and on cotton, 27 cents. The average cost of hauling a ton a mile in the United States is 23 cents. Compare this with the countries of Europe, where roads are built and maintained by the Government, and you get some idea of the terrible handicap the American farmer labors under in getting his produce to market. In France, England, and Wales the average cost per ton per mile is 10 cents; in Belgium, 9½ cents; in Germany, 8½ cents. In other words, it costs the American farmer from 40 per cent to 95 per cent more to haul his products from the farm to the railroad station or the river landing or to the nearest market town than it does the farmer of Europe. Here are some more figures. One ton can be hauled 1,000 miles by steamship on the Great Lakes for $1.25. A ton can be hauled on the steam cars for 250 miles for $1.25; it can be carried 25 miles by electric power for $1.25. How far do you think it can be carried by horsepower over the roads of this country for $1.25? It can be carried just 3 miles.

Many attempts have been made to fix the relative weights which a horse can draw in an ordinary wagon over a level surface of various kinds. The following figures are given by the Department of Agriculture as fairly reliable: On a muddy earth road the amount varies from nothing to a maximum of 800 pounds; on a smooth, dry earth road, from 1,000 to 2,000 pounds; on a gravel road in bad condition, from 1,000 to 1,500 pounds; on a gravel road in good condition, about 3,300 pounds; on a macadam road, from 2,000 to 5,000 pounds; and on a brick road, from 5,000 to 8,000 pounds. These figures show that if the speed of travel is the same on all these road surfaces a horse will haul on a good macadam road from three to five times as many tons per mile in a day as upon a moderately muddy earth road. This matter may be considered in another way by admitting that one horse is capable of a certain fixed duty per day. Then, with a given load, the effective radius of travel from a given point on a macadam road is from three to five times the radius of travel from that point on a moderately muddy earth road. The trouble with unimproved earth roads is that they are moderately muddy for many months in the year.

Before the outbreak of the European war, and when freight rates were normal, it cost the farmer who lived 9½ miles from the railroad over which he shipped his products more money to haul a bushel of wheat that 9½ miles than it cost the buyer to ship that bushel of wheat from New York to Liverpool. To be exact, it cost the farmer just 1½ cents more. Bad roads, of course, are responsible for this heavy burden to the farmer.

Experts in the Department of Agriculture estimate that if the cost of hauling in this country can be reduced one-half the present cost, or 11½ cents a ton, the saving to the people will be $250,000,000 a year. Even with this reduction, which can be accomplished by the improving of our highways, the cost of haulage in this country will still exceed that of European countries.

In a statement on the high cost of hauling issued by Mr. Logan Waller Page, Director of the United States Office of Public Roads, he says:

> The high cost of hauling is not the only burden which the American people are carrying by reason of their bad roads. In traversing a country isolated from markets by reason of bad roads one is struck by the waste in untilled land and by the lack of variety in the products. This is due more frequently to lack of adequate transportation facilities than to the lack of industry and intelligence.

But the building and improving of roads is not the only way in which money can be saved for the farmer. After the roads are built, if they are to be of permanent benefit to the people who use them, they must be properly maintained. It is not sufficient to give them attention once or twice a year, as is our custom. It has become the habit in many of the States to put off road repairing until such time as work on the farm will permit. Under this system many macadam roads, constructed at great expense, are allowed to go to ruin because minor defects are permitted to go unrepaired until they result in practical destruction of the road. A system of continuous repairs and a methodical inspection of all roads should be adopted in this country. In France every mile of road is inspected daily and the slightest defect at once repaired. The Agricultural Department experts whom I quoted a moment ago declared that if wise and equitable road laws and good business management could be substituted for the present antiquated and wasteful system of handling our roads there could be an additional saving of $40,000,000. Thus in the two items of hauling and road administration the people of this country have it within their power to save themselves $290,000,000 yearly.

No one will dispute the fact that good roads increase land values. Figures issued by the Agricultural Department place this increase all the way from $2 to $9 to the acre. In many instances the building of good roads has increased the value of land $12 and $15 an acre. There are about 850,000,000 acres of farm lands, improved and unimproved, in the United States. So it can readily be seen that the possibilities of increase in values through road improvements are enormous.

Not only do good roads increase the value of the land and enable the farmer to get his products to market more cheaply, but they are important factors in increasing the population. In 25 counties, selected at random, in which an average of only 1½ per cent of the roads were improved, the population between 1890 and 1900 fell away over 3,000 persons in each county. In another 25 counties, selected at random, but in which there was an average of 40 per cent of improved roads, the population in each county increased over 31,000. Then again, it is the testimony of school superintendents in rural districts that school attendance is materially increased in localities where roads have been improved.

While until the passage of the Shackleford bill Congress has not done anything to benefit the public highways of the country during the last 60 years, it has not been backward in providing liberally for other projects. It has appropriated $394,399,149 for the Panama Canal. There has been appropriated to date $893,698,672 for the improvement of rivers and harbors, and the appropriations for irrigation projects has amounted to hundreds of millions of dollars. I am not finding fault with these. Most of the projects are worthy and should be provided for. But, Mr. Speaker, good roads are just as important as improved rivers. In fact the roads should be improved before the rivers are, for those not living on the rivers are at a greater disadvantage without good roads than are those who live on or near the rivers, without the improvements to the rivers. In discussing this matter during the second session of the Sixty-second Congress I said:

"The same reasons which justify the Federal Government in the improvement of our waterways apply with equal force to the improvement of our public highways. Indeed, I think the latter proposition has a prior claim upon the Government, because those who live convenient to our rivers have adequate means of transportation without Federal aid for a considerable portion of the year—an advantage which is not possessed by the great bulk of residents in inland sections, because of their distance from river and railroad transportation.

"But, aside from all this, the question of good roads is inseparably linked with the great problem of transportation—a problem of the most vital importance at this time to the whole country, and especially to the Southland. In the near future the two oceans will be united by the Panama Canal. As a result of this the way will be opened to the Pacific and to the markets that lie beyond, where we expect to get a far greater share than we do now of the world's commerce. The magnificent resources of the South await that consummation, which will undoubtedly bring to her people a greater degree of development than has ever been known in her history, and we must prepare for this new outlet to the products of our fields and forests and mines and factories. The solving of the great problem of ocean transportation by the building of the canal will not remove the only obstacle in the way of the South receiving its full share of these advantages. We must not only improve our rivers, so that our products may be transported upon them all the year around, but it is equally important that proper means of transportation be provided for the inland sections if they are to receive their share of the advantages which their money aided in creating.

"I do not begrudge the more than four hundred millions of the people's money that will have to be devoted to the construction of the great canal, but I do say that unless we complete the chain of transportation by the adequate improvement of our rivers and our public highways leading to and from inland sections, we will not have done our duty, but by our inaction we will have deprived them of that to which they are justly entitled."

The farmers will be benefited more than any other class by the building of good roads, and it is right that this benefit should be given them. We have not dealt exactly fair with the farmers in the past. They have not had their proportionate share of governmental favor in the way of internal improvements and other Federal expenditures, as compared with the burden of the expenses of the Government which they bear. They have been taxed to help pay the many millions of dollars appropriated for the erection of public buildings. They have been taxed for the improvement of rivers and harbors—and of the total of $893,698,672 appropriated for these improvements nearly $300,000,000 was for harbors alone, from which the farmer certainly can not be said to derive much direct benefit. They will bear their proportionate share of the $35,000,000 which has been appropriated for a railroad in Alaska—and the benefits the large majority of them will derive from that is nil. They have been taxed their proportionate share of the nearly $400,000,000 that have been expended for the building of the Panama Canal.

Why, Mr. Speaker, the Government has been more generous to the farmers of our island possessions than it has been to the farmers of the mainland. The report of the Philippine Commission shows that there has been expended in the islands, since we took possession of them, on public-road improvement approximately $3,250,000, while nearly $8,000,000 have been spent for a like purpose in Porto Rico. In Hawaii road construction has been carried on extensively since we acquired the islands. Are not the farmers of the States entitled to at least the same generous treatment that is accorded the people of our far-off possessions?

We have recently voted hundreds of millions of dollars in order that we might be prepared to resist the invasion of a foreign foe. We have adopted an ambitious building program for our Navy, which those in charge of our affairs claim will make us the second naval power of the world; we have greatly increased our Army and have authorized the President to construct an armor plant and a nitrate factory for the manufacture of powder. But, Mr. Speaker, these steps toward preparedness will not be complete without a system of good roads throughout the country. Should the time ever come when an enemy lands on our shores—and heaven forbid that such a time shall come—it is just as necessary that we have good roads over which to transport our armies as it is that we have good battleships, good coast defenses, good guns, and soldiers and sailors. The terrible war that is now raging in Europe has shown to the world the advantage of good roads. Without the magnificent highways in France and Belgium the rapid movements which have been made by the great armies would have been impossible. Railroads can not always be depended upon in time of war. Rails can be torn up, bridges destroyed, and rolling stock put out of commission, but with the proper system of national highways our armies would be independent of the railroads. It would be possible to transport our soldiers and munitions of war from place to place without loss of time. Think of the terrible conditions that beset the armies during the war between the States!

The legislative bodies of the States are awakening to the necessity of building roads. There are now but six States in this Union that do not participate in some manner in road work. According to a statement issued by the Department of Agriculture last October the total expenditures by the States for road work in 1914 was $249,055,067. There are nearly two and a half million miles of roads in this country, of which only about 250,000 are improved.

Our tendency in the past has been to build up our cities at the expense of our country districts. We can not expect ambitious young men and women to remain on the farms unless we give them certain advantages. Farm life should not be made a life of isolation; farmers should be able to visit their neighbors in all kinds of weather and at all times of the year; there should be no restrictions on hauling produce in bad weather. But this can not be done without good roads. Give to the country districts roads which can be traveled at all seasons of the year and you will soon see a marked tendency on the part of the young people to stick to the farms. Good roads will do much to counteract the lure of the city and town.

Hon. James Wilson, who, as Secretary of Agriculture, did so much toward the improving of country roads, has this to say on good roads:

> No other form of internal improvement so directly and vitally affects the welfare of the agricultural classes. I know the principal obstacle to road improvement is the burden of taxation that it imposes. But in considering this question, the taxpayers should remember that bad roads impose an enormous burden, a sort of perpetual tax, from which there is no escape except through the permanent improvement of the highways. While the burden of taxation may seem heavy, the money spent in improving the highways should be looked upon as an investment, the returns from which will increase the prosperity of the community far more than it is depleted by the necessary taxation. Then, besides the material advantages, there are comforts and pleasures, moral and social benefits, resulting from good roads, which are of incalculable value to any community. Where good roads have once been established and their benefits enjoyed, the people are never willing to get along without them.

Mr. Speaker, it is the history of the world that the empire that builds good roads is the empire that lasts. Romans are known as conquerors, rulers, administrators, but they are known best as road builders. Empires have arisen overnight and fallen overnight—empires which passed away without leaving a trace of their former existence; but wherever the Roman stamped his rule the trace of that rule remains. The roads the Romans built in England are still there, although 15 centuries have passed since Roman domain extended over that country. In Italy, after the Lombard, the Goth, the Byzantine, and all the peoples of the middle ages that have ruled that country, it is the imperishable Roman road that reappears. Mr. Speaker, what Rome has done, America can do. With our limitless resources, the wonderful ingenuity of our people, our vast possessions, there is no reason we should not become the leading road builders of the world. And I believe we will.

## The Democratic Administration.

### SPEECH

OF

### HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, May 30, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. LANGLEY. Mr. Chairman, the people of the United States are to be congratulated upon the prospect that the days of the present Democratic régime are numbered and that with the reinstatement of the Republican Party in power on the 4th day of March, in the year of grace 1917, the country will return to sane and safe policies in the legislative and administrative departments of the Government. In the history of the United States there have never been 3½ years of government so filled with sins of commission and omission as have been the years of the Democratic administration now happily drawing to a close. It has been a carnival of promises ignored or broken, of vacillation in executive activity, of utter disregard of vital interests, of utter disregard of ordinary business principles and practices. It has been a spectacle for gods and men, which to the looker-on would have been amusing, if it were not so intensely distressing.

The Democratic platform of 1912 declared that "excessive prices result * * * from the high-tariff laws enacted and maintained by the Republican Party, and * * * that no substantial relief can be secured for the people until import duties on the necessaries of life are materially reduced." For many years the Democrats have unceasingly asserted that the increasing cost of living was directly due to a protective tariff. They said to the people: "If you will put us into office, we'll show you. We'll just bust this great American market wide open, let all the world come in, and put cheap goods made by cheap labor in competition with the homemade article, and you'll see prices take a tumble. Just you watch us."

Well, the people allowed themselves to be fooled; that is, some of them; enough to let our friends the enemy win the election, and then—what tumbled? Prices? Oh, no! But the American market tumbled quite considerably, as I shall show later on by some data on imports. The election was hardly over before the Democrats of the Ways and Means Committee of the Sixty-third Congress, under the leadership of our amiable friend Mr. UNDERWOOD, set themselves to work to frame a tariff, and they introduced and passed their bill as soon as practicable after Woodrow Wilson's inauguration. They kept their word. They threw the American market open to the world, with the result that imports have increased enormously, especially of goods that pay no duty, and our normal exports—please note that I say normal exports—have decreased proportionately.

Has the cost of living been lowered in consequence of this piece of politico-economico-Democratico legerdemain? I will give the answer to this question by quoting from a report recently made by the Chief of the Bureau of Foreign and Domestic Commerce, at the request of the chairman of the Senate Committee on Finance, the figures being taken from a bulletin of the United States Bureau of Labor Statistics.

Under the head of "Index numbers of wholesale prices" it is shown that from 1900 to 1905 the prices ranged from 100.5 to 115.9; from 1906 to 1911 from 122.5 to 129.2. In 1912, the year of the last presidential election, they went up to 133.6; in 1913 they took another jump to 135.2; and in 1914 they stood at 134. In other words, instead of going down as a result of Democratic tariff tinkering they soared skyward.

Let me give another proof of the Democratic fallacy that a low tariff reduces the cost of living. In a bulletin—No. 197—of the Bureau of Labor Statistics—Retail Prices, 1907 to December, 1915—published last June, it is shown that in 1909–10, the year of the Payne-Aldrich tariff law, the relative retail prices, on the basic figure of 100, were, for sirloin steak, 76 and 79; in 1912 they were 90; in 1913 up they went to 99; in 1914 to 101. Round steak, in the same years, was 71, 76, 87, 97, and 103; rib roast, 80 and 83, 92, 99, and 102; pork chop, 86 and 95, 95, 104, and 109; bacon, 83 and 95, 91, 100, and 102. Another table in the same bulletin shows the number of pounds of these food articles that could be bought for $1 in 1907 and 1915, from which I make this excerpt:

| | Sirloin steak. | Round steak. | Rib roast. | Pork chops. | Bacon. |
|---|---|---|---|---|---|
| | Lbs. for $1. | Lbs. for $1. | Lbs. for $1. | Lbs. for $1. | Lbs. for $1. |
| 1909 | 5.2 | 6.2 | 6.3 | 5.7 | 4.4 |
| 1910 | 5.0 | 5.8 | 6.0 | 5.2 | 3.8 |
| 1912 | 4.3 | 5.1 | 5.0 | 5.2 | 4.0 |
| 1913 | 4.0 | 4.5 | 5.1 | 4.7 | 3.7 |
| 1914 | 3.9 | 4.3 | 4.9 | 4.5 | 3.6 |

Now, Mr. Speaker, I shall not contend that the purchasing power of the dollar has become less since 1913 because, unfortunately, the Democrats are in control of the Government, or that prices of commodities rose because of that fact. I am citing these statistics to show the recklessly uttered fallacious contention the Democrats have employed in their claim that the high cost of living was due to a protective tariff. I am quite willing to let the figures tell their own story, which is that tariff rates have no more effect upon the cost of living than last year's snow has upon this year's storms. The Democrats have not reduced the cost of living; they can not reduce it by any amount of legislation, and they knew they couldn't do it when they promised to do so.

Mr. Speaker, if it had not been for the awful war which is devastating Europe the Underwood tariff would by now have driven the United States to the financial bow wows. One of the chief sources of the national income is the customs revenue, the revenue from duties on imports of merchandise. Under Republican administration the schedules were so arranged that dutiable imports were always in excess of free imports; in other words, the free list did not play the important part. All this was changed under Democratic auspices. It will be interesting to compare the amounts of dutiable and free imports under the Payne-Aldrich and the Underwood tariffs. These are the figures for the fiscal years:

*Payne-Aldrich.*

| | 1909 | 1910 | 1911 | 1912 | 1913 |
|---|---|---|---|---|---|
| Dutiable | $712,363,585 | $801,636,034 | $750,253,296 | $771,504,104 | $825,484,072 |
| Free | $599,556,639 | $755,311,896 | $776,972,509 | $881,670,830 | $987,524,162 |
| Per cent of free | 45.70 | 48.05 | 50.87 | 53.33 | 54.47 |

*Underwood.*

| | 1914 | 1915 | 1916 |
|---|---|---|---|
| Dutiable | $766,422,958 | $640,643,065 | $705,219,724 |
| Free | $1,127,502,699 | $1,033,526,675 | $1,492,663,786 |
| Per cent of free | 59.53 | 61.70 | 67.91 |

Another no less interesting exhibit of Democratic onslaught on customs revenues is made in the following little table which shows the actual amounts received from duties on imports under Republican and Democratic laws, respectively:

| | |
|---|---|
| 1909 | $300,711,034 |
| 1910 | 333,683,445 |
| 1911 | 313,846,269 |
| 1912 | 311,257,348 |
| 1913 | 318,142,344 |
| 1914 | 202,128,528 |
| 1915 | 209,268,109 |
| 1916 | 211,866,222 |

This shows how greatly the revenue from imports has fallen off as a result of the Underwood tariff. The comparison is most striking if we set off the first three years of the Underwood tariff against the first three years of the Payne-Aldrich tariff. Under the operation of the latter the customs yielded for the period named nearly three hundred and twenty-five millions more than under the Democratic Underwood tariff. Approximately the same difference is found if we compare the last three years of the Democratic concoction. It is not difficult to see that this steady decrease in one of the two chief sources of the national income and the steadily increasing expenditures due to Democratic extravagance was bound to bring about the deficit which the Democrats in and out of Congress are frantically trying to conceal by a more or less clever juggling in Treasury bookkeeping.

The European war came as a godsend to the Democrats, for the enormous demands upon our market by every one of the belligerent nations enabled them to point to the rapidly accumulating balance of trade in our favor. Behold prosperity under a Democratic administration! That is their cry. Is it genuine prosperity; is it the result of steady improvement in all lines of business; or is it just a flash in the pan, sure to die out as soon as the war ceases? Let us see.

A bulletin issued under date of August 24 by the Department of Commerce says:

> The favorable balance of trade for July was $263,000,000, and for the year, $2,273,000,000. A year ago the export balance was $125,000,000 for July and $1,225,000,000 for the 12 months, while two years ago there was * * * an export balance of $443,000,000 for the 12 months.

If this balance in our favor were the result of the normal courses of trade, it would indeed be convincing proof that the country was on the pinnacle of prosperity. But a dispassionate examination of facts and figures makes it plain that the brilliant conditions are by no means due to Democratic prescience or statesmanship, but to causes over which neither Mr. Wilson nor any of his advisers nor the Congress of the United States had the slightest foreknowledge and which lie entirely beyond their control. The following table shows a list of exports, the increased amount of which for the fiscal years 1915 and 1916 over the year 1914 is unmistakably traceable to the extraordinary needs of the belligerent nations:

*Exports.*

| | 1914 | 1915 | 1916 |
|---|---|---|---|
| Horses | $3,388,819 | $64,046,534 | $73,531,146 |
| Mules | 690,924 | 12,726,143 | 22,946,312 |
| Brass and manufactures of | 7,472,476 | 20,544,559 | 164,876,044 |
| Corn | 7,008,028 | 39,339,064 | 30,780,887 |
| Oats | 767,527 | 57,469,964 | 47,933,096 |
| Rye | 1,555,012 | 14,733,409 | 15,374,499 |
| Wheat | 87,953,456 | 333,552,226 | 215,532,681 |
| Aeroplanes | 226,149 | 1,541,446 | 7,002,005 |
| Autos (com.) | 1,181,611 | 39,140,682 | 56,805,548 |
| Chemicals | 27,079,092 | 46,380,986 | 124,362,167 |
| Manufactures of cotton | 51,467,233 | 71,974,497 | 112,053,127 |
| Explosives | 6,272,197 | 41,476,188 | 467,081,928 |
| India rubber and manufactures of | 12,441,220 | 14,767,513 | 35,180,099 |
| Firearms | 3,442,297 | 9,474,947 | 18,065,485 |
| Steel rods | 7,392,163 | 10,829,699 | 37,693,359 |
| Steel billets etc | 1,042,854 | 4,815,233 | 42,421,064 |
| Metal-working machinery, including tools | 14,011,359 | 28,162,968 | 61,315,032 |
| Sole leather | 7,475,843 | 21,351,434 | 27,186,761 |
| Men's shoes | 10,117,965 | 17,679,931 | 36,869,906 |
| Meat and dairy products | 146,227,780 | 220,051,347 | 291,057,602 |
| Alcohol | 67,728 | 108,985 | 8,784,742 |
| Manufactures of iron and steel, not specified | 18,230,560 | 20,397,835 | 138,905,453 |
| Lead and manufactures of | 2,610,207 | 9,044,479 | 13,787,774 |
| Woolen manufactures | 4,790,087 | 27,327,451 | 53,983,655 |
| Zinc, pigs, bars, and manufactures of | 406,208 | 21,243,935 | 45,865,155 |
| Total | 423,308,795 | 1,148,191,455 | 2,149,396,588 |

This table shows that of these articles required mostly for the use of the military forces, the excess for the fiscal year 1915 over 1914 was, in round figures, $725,000,000, and for the fiscal year 1916 it was $1,716,000,000. The bulletin from which I have quoted also says that the favorable balance of trade for the year was $2,273,000,000, as against $443,000,000 for 1915, a gain of $1,830,000,000. Now, deduct from this the $1,716,000,000 for munitions of war and correlated goods and you find a gain only of something over $114,000,000, which can easily be accounted for as due to other unusual needs, such as clothing and food of the nations at war, and also of neutral nations affected by disturbed conditions. The prosperity to which the Democrats point with so much pride is of the mushroom variety; it will die as soon as the conditions disappear which made it grow.

When will that be, Mr. Speaker? As soon as the war ceases, of course. Nay, even sooner than that, because, as I am told, some of the manufacturers of war munitions are already dis-

mantling their temporary establishments, selling the machinery, and are turning their attention to their regular products. I am quite ready to believe this to be true, because the entente powers to whom we have furnished these extraordinary supplies have not only perfected their own individual resources but are being aided—as in the case of Russia—by the indomitable energy and industry of the Japanese. When this war ceases there will come an economic war such as the world has never known, and be sure that the United States will be one of the commercial fortresses against which some of the most violent and most persistent attacks will be directed. Even now, though still in the throes of combat, the allied powers are increasing their industrial output, according to the reports of the American consuls. What will it be when England and France and Germany can again turn all their great productive energies to purely commercial aims and flood every port with their wares?

I have heard here and there some talk about higher wage rates in those countries after the war, because the usual supply of able-bodied men to do the work which men ordinarily do will have been sadly curtailed by the war. It is altogether probable, however, that this will be true only to a limited extent, because the women over there have learned and have become proficient in the trades in which men formerly labored. They will not yield up the new avenues of earning a livelihood which thus have been opened up to them. Besides, there are among the many millions now on the battle fields some millions who will be quite able and only too glad to go back to accustomed vocations. While it is possible that wages in Germany and France and England may be increased to some extent, there will yet remain such a difference between wages over there and in the United States that foreign products can enter into destructive competition with ours. Moreover, let it not be forgotten that the Governments of all the belligerent nations stand ready, with all the resources at their command, to aid their peoples to regain the markets of the world so far as these have been lost or curtailed to them by reason of the war.

The foundation has already been laid for this world-wide commercial struggle. Both the entente allies and the central allies have entered into agreements to pursue it. It will be the old cry of "God for us all, and the devil take the hindmost." As far back as last January representatives of Germany, Austria-Hungary, and Bulgaria met at Dresden and appointed a commission to work out an agreement looking to the creation of a "Zollverein," or customs union of these countries, and also with a view, according to a declaration issued at Paris last June, to establishing "their domination over the production and markets of the whole world."

The entente allies—Great Britain, France, Belgium, Italy, Russia, Japan, Portugal, and Serbia—immediately made a counterstroke. They sent leading business men and statesmen to a conference in Paris, which sat there from July 14 to 17 and formulated an agreement which, while ostensibly aimed at enemy countries, contained no less a menace to neutrals. The second section of this agreement contains the following paragraph:

> The allies declare themselves agreed to conserve for the allied powers, before all others, their natural resources during the whole period of the commercial, industrial, agricultural, and maritime reconstruction, and for this purpose they undertake to establish special arrangements to facilitate the interchange of these resources.

Here the gauge of commercial war is thrown down not only to enemy countries but in a measure to neutral countries as well. Certainly it serves notice upon the latter to gird up their loins for the inevitable conflict, a conflict which will eventually end in the survival of the fittest, and the fittest will be they who are best prepared for the onslaught. The present war may drag along its horrid length for another year, or even more; but the end may come with startling suddenness, just as did the beginning. No one can tell. Is our country prepared—industrially, economically, financially—to stand the shock? Will it not be wise to place its destinies in the hands of a party which for the greater part of half a century has guided those destinies safely instead of leaving them in the hands of the party which again has proved its utter unfitness for grappling with great questions or even grasping their ultimate effects?

The Democratic Party is not able to understand or willing to practice economy in national housekeeping. It has proved itself woefully, unpardonably, profligately extravagant. It has piled up appropriations without any regard to the revenues, present or prospective, of the Government. The appropriations made during this session exceed by hundreds of millions those of any other Congress. To prove my assertion I will first quote from so excellent an authority as the Democratic Textbook for 1910, in which a comparison is made of the appropriations made during the Cleveland administration, 1894 to 1897, and the Roosevelt-Taft administrations, 1907 to 1910, in order to show Republican extravagance. The total of appropriations from 1894 to 1897 was $1,866,440,200, while those from 1907 to 1910 aggregated $3,842,203,577.

The appropriations by the Sixty-third Congress, the first of the Wilson administration, totaled $2,231,239,546, according to the statement made in this House by the chairman of the Appropriations Committee on the 4th day of March last year. The appropriations for the first session of the Sixty-fourth Congress will aggregate close up to $1,700,000,000, inclusive of the deficiency appropriation bill, yet to be passed, the $50,000,000 of the ship-purchase bill, and $50,000,000 for the flood-control bill. Assuming that the appropriations at the second session of this Congress will approximate those of the first session—and I think this assumption is warranted—we have a total of about $3,400,000,000 for the Sixty-fourth Congress.

Now, let me make a comparison or two. The total appropriations for the Wilson administration—that is, up to March 4 next—will figure up about $5,631,239,546. This will be some thirty millions more than three times as much as the appropriations during the Cleveland administration—which, by the way, also had to issue bonds to meet current expenses—and it will be $1,789,000,000 in excess of all the appropriations during the Roosevelt administration, the alleged extravagance of which was terribly excoriated by our Democratic friends in the aforesaid textbook. The total of appropriations during the Taft administration, Sixty-first and Sixty-second Congresses, was $4,390,081,830. Compare this with the appropriations made and to be made during the Wilson administration and $1,240,000,000, in round figures, will be put on the debit side of the Democratic account. If these are specimens of the promised Democratic economy which was trumpeted throughout the length and breadth of the land in 1912, then the people of the United States may well pray to be delivered from a continuance of the same, for, even if we make allowance for the extraordinary large appropriations for the Army and Navy, to which no good patriot objects, there is still a Democratic excess of something like $800,000,000.

In the course of my remarks in this House on July 8 I invited the attention of my fellow Members to a chapter to be entitled "The psychological processes involved in the mind changing of President Wilson and his party, the subjects on which they have changed, and the chronological order in which those changes have occurred." Well, my brethren, here is the chapter. Just let me say by way of a proper introduction that never in all the cycles of recorded time will you find a record of such sudden changes like unto that of Woodrow Wilson. The chameleon whose skin takes on different hues according to the surroundings of the animal has nothing on our President. No lightning-change artist that ever amazed a bewildered audience can hold a candle to him. No circus rider ever turned a somersault more quickly or more unexpectedly.

To begin, then, the Democratic platform of 1912 said, among other things:

> We favor a single presidential term * * * and we pledge the candidate of this convention to this principle.

In his speech of acceptance Mr. Wilson expressed cordial approval and pledged conscientious adherence to its utterances, which, of course, included the one-term principle. Yet he raised not a word of protest against his renomination and is working for his reelection as earnestly as is decently possible for a man in his exalted station. The jewel of consistency was thrown upon the scrap heap.

Another section of the Democratic platform reads thus:

> We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. Our pledges are made to be kept when in office, as well as relied upon during the campaign.

That pledge evidently was of the pie-crust variety, for President Wilson had not been long in office before he changed his mind and urged Congress to repeal the exemption clause in the Panama Canal act, and the Democratic Congress did as it was told to do.

In a letter written in April, 1907, to a friend he said:

> Would that we could do something, at once dignified and effective, to knock Mr. Bryan once for all into a cocked hat.

And then he did the dignified act by taking Mr. Bryan as his Secretary of State, but the effective was reserved for some 18 months after that when he gladly put Mr. Bryan out of the Cabinet again.

Before an assemblage of naturalized citizens in Philadelphia, last May, Mr. Wilson said: "There is such a thing as a man being too proud to fight. There's such a thing as a nation being so right that it does not need to convince others by force that

it is right." But a few weeks later, standing before several thousand clergymen, he declared: "I welcome the acceptance of a challenge to fight." Surely, "it is to laugh."

In his address before the two branches of Congress, at the opening of the last session of the Sixty-third Congress the President ridiculed all suggestions of national preparedness, but in his address at the opening of the first session of the Sixty-fourth Congress he sang a different tune and advocated the greatest program of defense the country had ever heard of.

On the occasion of his visit to Indianapolis in January, 1915, the President in his address declared that a tariff commission was entirely unnecessary, as the Federal Trade Commission had ample authority to do what a tariff commission could possibly do. He intimated that the "scientific" arrangement of the tariff, as suggested in some quarters, would be "to put additional profits in the hands of those who are already getting the greater part of the profits." And now, lo and behold! he has again changed his mind and is most urgent for the creation of a tariff commission entirely divorced from the Federal Trade Commission, and this latest change of mind is embodied in the new revenue bill.

Adhering to the traditional policy of his party the President has always been opposed to a tariff which would foster and protect American industries but recently he has seen a new light and is quite ready to approve the insertion in the Democratic revenue bill of a paragraph giving sufficient protection to the dyestuff industry with a view to its vigorous growth before Germany, after the war, with her superior organization, resumes her shipments of coal-tar dyes to this country.

The virus of the presidential changeableness appears to have affected the party that chose him for its leader, for the Democrats have reversed themselves upon almost every one of their former cardinal tenets. And the most remarkable feature about this transformation is its suddenness. Free trade, which was rampant only a year ago, has given way to the inexorable logic of protection, and we find the duty on sugar restored and a protective-tariff duty put on dyestuffs.

The party that has always cried out against a large Military Establishment and whose leaders but a little while ago declaimed against the cost of preparedness, has created a larger Army and a larger Navy than this country ever knew or even dreamed of. It has been a persistent, even if not consistent, opponent of bond issues, but none the less it had to come to a bond issue in order to meet the enormous expenditures incident to the preparedness program. I could go on almost without limit citing and particularizing these psychological mutations of the Democratic Party and President Wilson, but I am admonished that my time is too brief to exhaust so prolific a subject.

In the indictment to be framed against the Wilson administration there is no stronger count than that which relates to its foreign policy, so called by courtesy. It is something to cause an American citizen to hang his head in shame. It has been and continues to be a pitiful, spineless object; an exhibition of vacillation that seeks its parallel in the history of this or any other country. Never since the United States has been a Nation, not even in the days when it was but a strip of land along the Atlantic coast and had a population considerably less than that of Greater New York, did it fail to assert its rights and those of its individual citizens. Americans have been murdered on the high seas as well as down in Mexico and no redress has been obtained for these outrages from the Governments responsible for them. Property of American citizens has been confiscated by foreign powers, trade has been interfered with and diverted from American to British and other foreign firms, but no redress has been obtained by our Government. The only punitive measures have been the unending notes which followed every new outrage.

As for our course in Mexican affairs, words are not adequate to its proper designation. The mildest possible comment upon it is to say that it is disgraceful and will so be branded by the future historian. In connection with it the psychological agility of President Wilson is displayed in bold relief. He played fast and loose, first with Villa and then with Carranza. First sent arms and ammunition to one, then to the other; declared an embargo on the shipment of munitions one day, only to revoke it the next day. Our flag was insulted at Vera Cruz and forthwith we sent a fleet to demand satisfaction for the offense. We did not get any satisfaction, but some dozen of our sailors were killed in the operation. Troops have been sent into Mexico to capture Villa. A number have been killed but Villa has not been captured. Like the King of France who—

> With full 10,000 men,
> Marched up the hill and then marched down again—

the troops we have down there are being gradually withdrawn. The "punitive expedition" has come to naught, and its only result is increased bitterness in the hearts of the Mexican people against their neighbors on this side of the Rio Grande, quite probably mixed with some contempt for our abject failure to make good our word. Had not President Wilson with characteristic obstinacy refused to recognize Huerta, the only strong man Mexico has known since Porfirio Diaz, the whole mournful series of events that have marked our relations with Mexico for the last three years could have been avoided and there would be less mourning for lost loved ones in America.

Verily I hail the first rays of the coming day when the American people will reverse the verdict of four years ago and will retrace their steps to the safe ground of Republican policies. Lured from their moorings by the ignis fatuus of Democratic promises, they have strayed into the wilderness and have been reaping the fruits of their folly.

They must have become convinced by this time of the economic wisdom of a protective tariff, a policy that has proper regard for the difference in the cost of labor between foreign countries and the United States, a policy that aims at the maintenance of the American standard of living and preserves the American market—the best market in the world—for the American people.

While the Republican Party was in power there were no closed factories, as in the latter part of the year 1913 and the early part of 1914; no idle men to frequent soup houses and stand in a bread line. The sun of prosperity shone over all the land. And so it will be again, let us all hope, after the 4th day of March, 1917.

---

## My Office Not a Collection Agency.

### EXTENSION OF REMARKS

OF

### HON. JAMES V. McCLINTIC,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. McCLINTIC. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to state that one Jack Hunter has notified my friends that if I did not secure from a certain postmaster some five or six hundred dollars he claims as a commission due him on a trade he would take the field and do everything in his power to defeat me for Congress. This transaction took place while I was in Washington, and, as I am not concerned in it in any way, I refuse to be coerced or to use my office for a collection agency.

The following affidavits have been made by some of Snyder's most prominent citizens, and their word can not be disputed:

AFFIDAVIT OF CHARLES PORTWOOD.

*State of Oklahoma, county of Kiowa:*

Before me this day personally appeared Charles Portwood, who, after being duly sworn, deposes and states he has been a resident of Snyder for eight years; that during the night of the 12th of September he was awakened by Tom Chapman and informed that Jack Hunter had told him if McCLINTIC did not secure from a certain postmaster a certain sum of money within 48 hours he would do everything in his power to defeat him; that to his own knowledge McCLINTIC was not in Oklahoma when this trade was made and knew nothing about it.

CHARLES PORTWOOD.

Subscribed and sworn to before me this the 15th day of September, 1916.

H. J. BROWN, *Notary Public.*

My commission expires August 6, 1919.

---

AFFIDAVIT OF TOM CHAPMAN.

STATE OF OKLAHOMA, *County of Kiowa:*

Before me this day personally appeared Tom Chapman, who, after being duly sworn, deposes and states that he has been a resident of Snyder for 12 years; that on the 12th day of September one Jack Hunter informed him he had sued a certain postmaster on a real estate trade consummated during the past year and if McCLINTIC did not collect this money and pay him within 48 hours he would oppose him in his race for Congress; that McCLINTIC had nothing to do with this real estate deal and knew nothing about the facts in the case, as he was in Washington.

TOM CHAPMAN.

Subscribed and sworn to before me this the 15th day of September, 1916.

H. J. BROWN, *Notary Public.*

My commission expires August 6, 1919.

---

AFFIDAVIT OF CHARLES ALLEN.

STATE OF OKLAHOMA, *County of Kiowa:*

Before me this day personally appeared Charles Allen, who, after being duly sworn, deposes and states that he has lived in and about Snyder for the past 14 years; that on the 13th day of September, in the

presence of Tom Chapman, Jack Hunter informed him if McCLINTIC did not secure from a certain postmaster a sum of money representing a commission on a trade within 24 hours he would do everything in his power to defeat him.

As an officer I served the papers in this case, which is now in court, and know that McCLINTIC was out of the State when this controversy took place.

CHARLES ALLEN.

Subscribed and sworn to before me this the 15th day of September, 1916.

H. J. BROWN, *Notary Public.*

My commission expires August 6, 1919.

I have refused to pay this money or to become involved in this controversy. I have been informed by a citizen of Mountain Park that Hunter has started a fight against me which will assist the Socialist candidate, and I warn my friends to be on the lookout for him.

## Nine Big Advantages of the Rock Island Arsenal.

### EXTENSION OF REMARKS
OF
### HON. CLYDE H. TAVENNER,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, September 8, 1916.*

Mr. TAVENNER. Mr. Speaker, the nine big advantages of the Rock Island Arsenal are as follows:

1. The strategic location of the Rock Island Arsenal from a military viewpoint gives it an advantage which is possessed by no other arsenal in the United States. Being well in the interior of the country, it would be much safer from attack and possible capture by an enemy in time of war than plants located on or near either coast. No matter from what direction an invading army might come, our Army would still have a vast manufacturing plant to furnish supplies to it from the rear. Neither from north nor south, east nor west, could an invader reach the Rock Island Arsenal until every ounce of power possessed by the people had been overcome.

2. Its central location geographically, makes it convenient to ship the finished product to either the Atlantic, Pacific, or Gulf coasts with economy in both time and transportation costs. The economy of time is of importance in time of war, when the saving of a day or two days, or even of a few hours, in the arrival of a train of ammunition or other paraphernalia of war at the scene of hostilities might easily be of the greatest moment.

3. Cheap water-power possibilities that are everlasting, the Government owning its own water-power plant in the Mississippi River. Under the management of the present commandant, Col. George W. Burr, this plant is producing 2,000 horsepower at a cost of 3½ mills per kilowatt hour, the low cost of which can be best understood when it is stated that at the great Keokuk Dam, less than 100 miles down the river, consumers are charged from 8 to 10 cents per kilowatt hour, which is approximately thirty times more than the sum for which Col. Burr is developing power for the Government at the arsenal power plant. With an expenditure of $135,000 for new equipment the present water-power plant could be made to produce 4,000 horsepower at a cost of less than 2 mills per kilowatt hour. And even this development would use only 18 of the 42 openings in the power dam. With all of the openings equipped with turbines 9,000 horsepower could be developed at an equally low cost per unit.

4. The advantages of Rock Island as a manufacturing center, as demonstrated by the fact that at the Rock Island Arsenal shops the Government has manufactured rifles, field artillery, gun carriages, and other war equipment at a cost ranging from 20 to 50 per cent below the prices of private manufacturers. For instance, caissons for gun carriages, wagons for carrying ammunition chests, have been manufactured at the Rock Island Arsenal for $1,128, which cost when purchased of private manufacturers $1,744, which is 54 per cent greater than the arsenal cost. Many similar illustrations could be given.

5. It would be unnecessary for the Government to purchase additional land in enlarging the Rock Island Arsenal, as the Government tract embraces 896 acres, any part of which could be utilized as sites for new buildings. At other arsenals it would be necessary for the Government to purchase additional property.

6. There is at least one, possibly two, large stone buildings in the arsenal grounds which were originally erected for manufacturing purposes at a cost of $400,000 each, which are not now being used for this purpose, and could be equipped for manufacturing war materials at a comparatively small cost. Elsewhere the Government would be compelled to go to the expense of erecting new buildings.

7. Should fuel ever be needed in addition to water power at the Rock Island Arsenal, there is a great abundance of excellent coal being mined almost at the very door of Rock Island, while the arsenal is at the same time convenient to the ore fields of the North.

8. The Rock Island military tract is located in the heart of a great manufacturing center, being within 2 miles of Rock Island, Moline, East Moline, and Davenport, all of which are essentially manufacturing cities, embracing a combined population of more than 100,000 people, and affording employment to thousands of mechanics, thus furnishing an ideal field from which the Government may draw its skilled labor and other help, which is a very important consideration in such an industrial enterprise as a great military manufacturing center.

9. Representative JOHN J. FITZGERALD, of New York, chairman of the great Committee on Appropriations of the House of Representatives, who in making appropriations for the several arsenals of the country, has had special opportunity to familiarize himself with the advantages of the various arsenals, has stated unequivocally that Rock Island Arsenal is the logical place for the Government to concentrate its military manufacturing plants. In a debate on the floor of the House of Representatives on June 23, 1914, Representative FITZGERALD said:

> I have no prejudice in favor of or against any of these arsenals, but if it be necessary to expand our facilities in these arsenals unduly, as a common-sense business proposition, the place to develop and extend and enlarge is not at Watervliet, which is in my State, not at Springfield or at Watertown, in Massachusetts, not at Frankford, in the city of Philadelphia, but at Rock Island.

## Pensions for Aged Men and Women—House Bill No. 233.

### REMARKS
OF
### HON. BENJAMIN K. FOCHT,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, September 8, 1916.*

Mr. FOCHT. Mr. Speaker, on December 6, 1915, the first day of the session now closing, I introduced a bill (H. R. 233) providing for the pensioning of American citizens who have reached the age of 65 years, are incapable of manual labor, and whose incomes are less than $200 per annum. This bill reads as follows:

> *Be it enacted, etc.*, That on and after June 1, 1917, all American citizens having an income of less than $200 per annum and are 65 or more years of age and unfit and incapable of manual labor shall be allowed an annual Government pension at the rate of $10 per month.

The United States is the only country among the great civilized nations of the earth, with the one exception of the Russian Empire, which still is without an old-age pension system of some kind. The subject, of course, has been discussed in various forums throughout the land from time to time for several years, but it has been on the whole a purely academic discussion. I believe, Mr. Speaker, that I have the honor of having offered the first legislative suggestion in this Congress to remedy this defect in our social economic system, though I recognize and appreciate with great pleasure the fact that others have followed me in the direction I have indicated, chiefly among them the very distinguished chairman of the Committee on Invalid Pensions, Gen. ISAAC SHERWOOD.

It is not a pleasant thing to contemplate that we in the United States who pride ourselves upon being in the van of all humanitarian progress should have so long neglected so obvious a duty as caring for those soldiers of our great industrial army who for a lifetime have struggled bravely under more or less adverse conditions and in the evening of life find themselves unable, by reason of failing strength, to provide a livelihood either for themselves or for those who may be dependent upon them. This applies to both sexes. According to census statistics the number of wage earners in manufacturing enterprises and on farms in 1910 aggregated about 14,000,000; those employed on railroads numbered about 1,700,000. It is safe to say that the number of persons in the United States depending all the time upon the labor of their hands for earning a living is at this time not less than 25,000,000, and most likely more than that.

The measure which I have offered is not merely philanthropic; its spirit is that of justice from man to man. It is in harmony with the spirit of Christianity, of humanity. It is just another

step forward in the working out of the problem of the brotherhood of man.

Mr. Speaker, our land is dotted with almshouses, poorhouses, and jails in which men and women no longer able to earn a living for themselves pass a miserable existence, awaiting the day that will bring them surcease from want and suffering. If we enact a law such as I propose, or one on similar lines—for I am not wedded to a particular form—we shall have done much in the direction of obviating the need of such institutions as I have named. There will always be, of course, many who by native indolence or vicious habits will qualify themselves for becoming inmates of the poorhouse, but I am happy in the belief that these constitute a comparatively small percentage of the men and women who by stress of circumstances beyond their control have to find refuge there. It should be our earnest desire to provide a remedy. The man or the woman who has during a lifetime labored honestly should not be compelled in old age, or when incapacitated by illness or disease to face the fate of a pauper.

Considered from a purely economic standpoint legislation of this character is to be advocated because of the enormous savings which through it will come to every municipality and State by the lessened cost in the maintenance of almshouses and poorhouses. What the business man calls his overhead charges would be in this instance reduced to a minimum.

There is probably no one cause more strongly accentuating the frequent antagonisms between capital and labor than the constantly recurring want of the wage earners in their old age. Under the most favorable conditions the average wage earner is unable to lay aside any considerable amount against the day when his strength to labor leaves him and his earnings cease. It is my opinion that the disturbing elements between employer and employee may largely be traced to this one fact. Happy, therefore, will be the day when that fear need no longer be constantly in the mind of the wage earners of our country; when they can look forward with assurance to the time in their lives when, even though their strength fail them or illness disable them, they will be given the means with which to make their declining days measurably comfortable. Moreover, such action on the part of the Government would unquestionably arouse in the mind of every worker a sentiment of gratitude which would find expression in a deeper patriotism. No tenable objection can be urged against a policy which in every way makes for betterment, but everything speaks in its favor.

It is a singular fact that the first practical application of a straight-out old-age pension system should have been made in the newest Governments among the enlightened nations—New Zealand and Australia. New Zealand takes the palm for being the first among civilized nations to establish a perfectly plain, unqualified old-age pension system. New Zealand was the first, and Victoria the next, to enact legislation of this character. Their methods are as simple as they are effective. No condition is attached to the granting of an old-age pension in those States, except that the applicant shall not be possessed of an income beyond a stated amount. The pensions are not saddled upon the community in which the applicant may reside, but are granted by the Central Government, which also bears the cost of administration. There is only one class of pensioners—the old and honest poor, men and women. They must be 65 years of age, residents of the country for not less than 25 years. The applicant must be a person of good moral character, and must bring evidence that he has not been an inmate of a prison for more than a stated brief period during 12 years preceding this application, and that he must have led a respectable life for at least 5 years before making application for pension. As already stated, his income must not exceed a certain amount, and if at any time subsequent to the granting of the pension that income is increased his pension is proportionately lessened. If his income, after the pension has been granted, reaches a stated amount, the pension ceases altogether.

The Province of Victoria was the first in the Commonwealth of Australia to introduce the straight-out old-age pension. Its law on the subject went into effect on the 1st day of January, 1901, a little more than two years after New Zealand had set the example. New South Wales followed suit the same year, and Queensland seven years later, and finally, by an act of the Australian Parliament, old-age pensions were made universal throughout the Commonwealth. In all these Provinces and in the Commonwealth the old-age pension laws were modeled upon that of New Zealand.

The outcry of State socialism which may be raised against the proposed legislation need deter no one. As a matter of fact, there is, I venture to say, no government of any civilized country, ours included, that has not to a greater or less extent embarked upon the policy of State socialism. In the United States, it is true, it is still in its infancy; and yet we have done some things that are in their essentials of the nature of State socialism. I will only cite the rural-credit banking law; the Government employees' compensation law, and similar enactments which indicate a realization, on the part of the Government, of its obligations to contribute from the resources of the Government to the improvement of the social and economic conditions of certain classes of the population.

In Europe State socialism has long since been recognized as a legitimate factor in the dealings between the Government and the people. Notably this is the case in Germany, Belgium, and France, in the order named, and the Scandinavian countries Italy and Great Britain have followed suit. While in none of these countries straight-out old age pensions are granted, as I have already stated, yet in all of them laws are in force which provide for old age and invalidity pensions to which the Government is a contributor. In all cases, however, in these countries not only the employee, but his employer also, has to pay in a certain amount annually which, with the Government aid granted, constitutes a general pension fund from which the old-age and invalidity pensions are paid. In Germany this has been carried so far as to embrace all classes of the working population, except employees of the general Government or municipalities and teachers, all of whom are entitled to separate pensions.

Let it not be supposed that it is pure philanthropy which has influenced this sort of legislation in these European countries. The fundamental motive has been the recognition of the fact that the conditions existing before these laws were enacted tended to pauperization and crime. It is an unquestioned fact that as a result of this legislation pauperism in every one of those countries has appreciably decreased. Now, if monarchical countries have seen the wisdom and jsutice of such action, how much more is it obligatory upon our Government, all of whose processes are based upon the principle of the greatest good to the greatest number. It is high time, I think, that we here in the United States should realize the full force of the claim which the working population of the country has upon our consideration. I can see no material difference between a pension granted to a police officer who has served honorably until age disqualifies him for furtner service and a man who has worked diligently and steadily in the factory or on the farm and finds at last that his strength has failed and that he is no longer able to march with the army of active industrial soldiers.

It would be the greatest mistake, Mr. Speaker, to put legislation such as I advocate under the head of charity. Our wage-workers are not objects of charity, and I know that no one more quickly than they would resent the offer of charity. But I am equally sure that in such legislation they will see that to them there is extended the measure of justice which is embodied in the command, "That which ye would have others do unto you, even that do ye unto them," and the assurance will come to them that through this action of the Government the chasm that separates them now from the man to whom the giving of millions for charitable purposes is a mere trifle has been greatly narrowed.

---

**Report of Congressman Murray Hulbert to His Constituents.**

---

## EXTENSION OF REMARKS

OF

## HON. MURRAY HULBERT.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, September 6, 1916.*

Mr. HULBERT. Mr. Speaker, the distinguished Senator from Wisconsin [Mr. LA FOLLETTE], in the course of a debate in the Senate, some time since, stated:

I believe that this Government of ours was designed to be a representative Government. I have conceived the idea that the people of each of the States have a right to know how they are represented.

I agree that the people of each congressional district have the right to know how they are represented, and therefore I ask leave to extend my remarks by presenting a report upon the first session of the Sixty-fourth Congress.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The following is the report:

*To the people of the twenty-first congressional district of New York:*

Two years ago you honored me with an election as your Representative in the Sixty-fourth Congress, the first session of

which, after nine months of deliberative action, will presently be brought to a close, and I deem it my duty to give you an account of my stewardship.

ESTABLISHED LOCAL CONGRESSIONAL OFFICE.

My term began on the 4th day of March, 1915, whereas the Congress did not convene until the first Monday of December following, so that, to be of service to you in the meantime, I established, in accordance with an ante-election pledge, a congressional office at No. 67 West One hundred and twenty-fifth Street, which I maintained until the opening of the session and where I met personally hundreds of my constituents.

INAUGURATED MAIL CENSUS OF CONSTITUENTS.

Realizing that in the 13 months intervening between my election and the assembling of the first session of the Sixty-fourth Congress the rapid progress of events changed the state of public opinion which obtained at the time of my election, and in order to ascertain to what exent, and be guided thereby, I conceived and inaugurated the plan of taking a mail poll, which when classified proved to be a very substantial aid to me in the discharge of my legislative duties, and in accordance therewith I have endeavored to represent the will of my constituents.

FIRST NEW YORK CITY REPRESENTATIVE UPON RIVERS AND HARBORS COMMITTEE.

Upon the organization of the House I was able to secure, largely through the efforts of my esteemed colleague, Hon. M. F. CONRY, member of the Committee on Ways and Means, from New York, an assignment upon the Committee on Rivers and Harbors, one of the nine appropriating and principal committees of the House of Representatives; and my selection and appointment gave to the city of New York, whose commercial supremacy is due primarily to her wonderful harbor and its tributaries, its first representative upon that committee in the history of Congress. The fact was extensively commented upon editorially in the New York papers at the time, and through the same medium, I have no doubt, you have kept yourselves informed with respect to the general results, which, however, I shall presently refer to.

HOW RIVER AND HARBOR APPROPRIATIONS ARE MADE.

A word upon the subject of the methods of river and harbor legislation may not be amiss. Whenever it is desired to secure the improvement of a harbor or navigable river, a bill must be introduced in the House authorizing the Secretary of War to cause a preliminary examination and survey to be made. A certain number of honor men in each class graduated at West Point are appointed to the Engineering Corps, which is divided into districts and presided over by the Chief of Engineers. Through the latter the Secretary of War directs that such survey, when the bill authorizing same has become a law, be made by the engineering officer in whose district the proposed improvement is located. He conducts both a physical and inquisitorial examination, and after making a survey reports upon the advisability and cost of the improvement. This report is submitted to a board of review consisting of Army engineers, whose findings are, in turn, referred to the Chief of Engineers, and his action thereon is either confirmed or disapproved by the Secretary of War, who then makes a final report to the House of Representatives. A bill may then be introduced in the House adopting the project and appropriating a sufficient amount of money to undertake the same, whereupon a hearing is then arranged for and held by the Committee on Rivers and Harbors; but in no case does the committee take favorable action where there has been an adverse report by the Army engineers. If the committee determines that the improvement is commercially economic and advisable, the item is incorporated in the river and harbor bill which it reports at each session to the House, where it is considered in Committee of the Whole, thus giving each Member an opportunity to discuss and vote upon every item of the bill.

After passing the House, the bill is transmitted to the Senate and referred to the Committee on Commerce; and when reported by it into the Senate is taken up and considered in like manner as in the House, to which it is again referred upon final passage. A conference committee of the two Houses is then appointed, generally consisting of the two ranking members of the majority party and the ranking member of the minority party of both branches of Congress, whose duty it is to adjust the differences between the two legislative bodies. Upon the adoption of the conference report the bill as thus modified is presented to the President for final action.

Since the Democratic Party came into power in the House in 1912 no new projects had been undertaken, and the committee has restricted appropriations to the completion of projects heretofore adopted—except Coenties Reef. In advance of each session of Congress the Chief of Engineers, United States Army, submits a report on the condition of each project theretofore adopted, setting forth the amount required to complete, total appropriations to date, balance available, and the committee makes such allowance therefor as in their judgment they may deem proper.

THE PRESENTATION OF THE CASE FOR NEW YORK.

In a speech which your Representative delivered in the House on February 3, 1916, he said in part:

"When it is realized that since the administration of Washington down to that of Wilson less than 3 per cent of all the moneys appropriated by Congress for river and harbor improvements has been allotted to the greatest harbor in the world, I hope and believe it will arrest the attention of the Members of the Sixty-fourth Congress in the same serious way as does the resolution which is under consideration at the present time. The improvement of New York Harbor is not a matter local in its nature, but it concerns the people of the entire United States, just as does the Valley of the Mississippi. It belongs to the Nation. It argues its own case, merely requiring my agency as an instrument of presentation; for truth knows no preferences. It seeks no favors and it makes no apologies. It simply demands a hearing.

"Approximately one-half of the exports and imports of the United States pass through New York Harbor, and 100,000,000 tons of commerce, if apportioned per capita, making 1 ton for each man, woman, and child in the United States, accommodates every section of this country; and from the merchandise imported through the port of New York more than double the amount of duties is collected and turned into the Federal Treasury than from all other ports of the United States together. And I had almost overlooked the fact and nearly failed to mention that New York State contributed in addition thereto $17,417,537.60, nearly one-half of the individual income tax, and $10,221,206.65, or more than one-fourth, of the corporation income tax collected during the year 1915. Do not these facts appeal to your sense of justice in securing your favorable consideration of that which I am now about to submit? The magnitude of New York City's industrial and commercial possessions, its wealth and population, can be comprehended only by comparison. In every decade since 1840 New York has shown a greater numerical increase in population than any other American city. One-thirteenth of the entire population of the United States now lives in the New York metropolitan district. New York City produces one-tenth of the entire manufactured product of the United States, more than any other State except Pennsylvania.

"The value of New York's taxable property exceeds that of Chicago, Philadelphia, Boston, and St. Louis combined. New York City banks handle 60 per cent of the clearings of the United States.

"New York is the terminus of all but one of the great eastern railroad systems.

"Thirty per cent of the entire population of the United States and 42 per cent of all the taxable property lie within 350 miles of New York City. The population in New York City increased since 1900, 47½ per cent. New York manufactures increased between 1900 and 1910, 70 per cent. The foreign commerce of New York increased from 1898 to 1913, 131 per cent. And yet in the improvement of this great harbor the Federal Government has not only failed to keep abreast of the needs of the times but has fallen far in the rear.

"I would like to put the New York Harbor situation before you in concrete form:

| Improvement. | Adopted. | Appropriated.[1] | Required to complete. | Total. | Commerce. |
|---|---|---|---|---|---|
| East River | 1868 | $6,505,203 | $13,400,000 | $19,905,203 | [2]$1,537,239,286 |
| Hudson River | 1875 | 641,479 | 995,000 | 1,636,479 | [3]2,559,185,809 |
| Harlem River | 1879 | 2,068,000 | 1,520,656 | 3,588,656 | 582,583,757 |
| Newtown Creek | 1880 | 525,900 | [4]10,000 | 535,900 | 147,739,825 |
| Sheepshead Bay | 1880 | 44,600 | ..... | 44,600 | 144,777 |
| Bay Ridge and Red Hook Channel | 1881 | 4,421,100 | 384,000 | 4,805,100 | 408,459,300 |
| Bronx River | 1896 | 326,500 | 703,931 | 1,030,431 | [5]1,947,785 |
| Ambrose Channel | 1899 | 7,600,010 | [4]40,000 | 7,640,010 | 2,056,847,222 |
| Coney Island Channel | 1907 | 114,300 | ..... | 114,300 | [6]5,256,300 |
| Jamaica Bay | 1910 | 700,500 | 6,730,000 | 7,430,500 | 5,171,668 |
| Harlem or Bronx Kills, recommended | 1902 | Nothing. | 1,900,000 | 1,900,000 | [7]None. |
| | | 22,947,592 | 25,683,587 | 48,631,179 | 7,304,375,730 |

[1] Maintenance only.
[2] 22,436,151 passengers.
[3] 106,253,639 passengers.
[4] Only 14 per cent completed.
[5] 1,178,168 passengers.
[6] State Barge Canal not yet open.

"In addition to the foregoing evidence that the improvement of New York Harbor is not a "pork-barrel" proposition, let it

be noted that the Ambrose Channel was constructed at a saving of about $1,500,000; that the balance to be expended, under the old project, for the improvement of the East River—$2,551,939—can be turned over to, and credited upon, the new project and will suffice to do the work required in the next five years; that the Coney Island Channel improvement was authorized upon an estimate of $168,300, and work to date, costing only $114,300, meets present-day needs and no further appropriations have been asked for.

"In 1868 the first project was adopted for the improvement of New York Harbor, to wit, East River, a tidal strait, of which the world-renowned Hell Gate is a part, about 16 miles long, extending from the Battery to Throg Neck, separating Long Island from the Boroughs of Manhattan and the Bronx, and connecting up New York Bay with the sheltered waters of Long Island Sound. With its subsequent modifications this project had for its object extending the depth of the channel to a depth of 26 feet over projecting rocks at an estimated cost of $8,757,183.

"About 70 per cent of the work has been completed.

"On March 2, 1912, Col. W. M. Black, United States district engineer at New York, submitted a report of the survey of the East River and Hell Gate, in which he reported favorably upon an amendment of the project for further improvement at an expense of $32,533,501, providing for a through channel 35 feet deep, with access to the wharves to a depth of 30 feet, and the improvement of the Harlem or Bronx Kills, to provide a short cut for boats passing from the Harlem, which will be the natural outlet for the State barge canal into the East River; and Little Hell Gate, as a means of reducing the tidal velocities and diminishing, if not avoiding, the consequent dangers at Hell Gate. The Chief of Engineers modified the recommendations of Col. Black by reducing the estimate 'for the present' to $13,400,000, which, largely through the efforts of our late lamented colleague, Col. Joseph A. Goulden, was included in the bill reported by the Rivers and Harbors Committee and passed the House in the Sixty-third Congress, first session, but failed in the Senate. Meanwhile no further appropriations have been made for the improvement of the East River; and while there is an unexpended balance of $2,551,939 now of the amount originally authorized, the Chief of Engineers reported in 1914 and again in 1915:

"It is believed that the present 26-foot project has been outgrown by the commercial interests involved, and that further work on this project is now economically inadvisable. No estimate is therefore submitted for operations in connection with said project during the fiscal year 1917.

"And I may add that nothing has been expended since 1912 upon this great waterway. The report of the Chief of Engineers adds:

"As a result of a careful canvass the commerce of the East River in the calendar year 1914 appears to have amounted to 46,553,605 short tons, valued at $1,537,239,286, and that the number of passengers carried was 22,436,151.

"The rivers and harbors act of June 13, 1902, directed a preliminary examination of the Harlem or Bronx Kills, which was made and reported by Col. Mansfield on July 28, 1902, whose report was reviewed by the Board of Engineers for Rivers and Harbors, and their report, dated November 11, 1903, concludes with the words:

"In view of the great present and prospective benefits that would result, it is advisable to undertake the improvement of the Harlem Kills to a depth of 18 feet at mean low water, at a cost of $1,899,480.

"There is a recommendation made 14 years ago, and what has been done meanwhile?

"I am astounded to find that there never has been an examination and report by the engineers upon the effect of the $154,000,000 improvement of the State Barge Canal with reference to the commercial development of the lower Harlem and East Rivers since the State Barge Canal improvement act was adopted; and there has been no action by any Congress since that time tending to effect cooperation at this point with the State authorities."

RIVER AND HARBOR BILL OF 1916.

When the preparation of the river and harbor bill for 1916 was taken up each member of the committee was supplied with the Engineer's report, and the committee adjourned over the holidays that the Members might familiarize themselves therewith. Upon the reconvening of the Congress the committee resumed daily sessions until about February 24, 1916, when the bill was reported to the House. At the inception of these hearings the writer introduced the following resolution:

Whereas the Committee on Rivers and Harbors has determined not to take on any new projects; and

Whereas the continuation of projects heretofore adopted for river and harbor improvements, as recommended by the United States Army engineers, will necessitate an appropriation in excess of $40,000,000; and

Whereas many of the said projects long since adopted may not meet present-day requirements or changed conditions have affected the natural advantages and decreased the commercial efficiency of such improvements; and

Whereas the agitation for greater preparedness in the military and naval branches of the Federal service will necessitate raising an extraordinary amount of money for the purpose of meeting that expense: Now, therefore, be it

*Resolved*, That for the purpose of effecting substantial economy in the preparation of the proposed river and harbor bill that the Chief of Engineers be, and he is hereby requested, to report with all convenient speed which of the several incompleted projects are most essential with regard both to their commercial necessity and as an aid to the national defense, and the appropriations for the improvement of which are deemed to be most essentially advisable: Be it further

*Resolved*, That the Chief of Engineers or his local representative, and whenever possible the district officer in charge of the work, be requested to attend the executive meetings of this committee while the appropriation affecting each district is being examined into for the purpose of enabling the individual members of the committee to further inform themselves with regard to the details and the necessity for the improvement thereof.

The resolution was not adopted.

The Chief of Army Engineers recommended for 1916 the following appropriations for New York Harbor and its tributaries, which in every instance except one, after a spirited contest in the committee, were allowed in full:

| Name. | 1915 | | 1915 | |
|---|---|---|---|---|
| | Asked. | Allowed. | Asked. | Allowed. |
| Portchester Harbor | $27,500 | $27,500 | $20,000 | $10,000 |
| Mamaroneck Harbor | 7,000 | 7,000 | 14,800 | 14,800 |
| Port Jefferson Harbor | 5,000 | 5,000 | 10,000 | 2,000 |
| Saugerties | 11,250 | 11,250 | 3,000 | ..... |
| Roundout | 4,250 | 4,250 | 5,000 | 3,000 |
| Peekskill | 1,000 | 1,000 | ..... | ..... |
| Tarrytown | 10,000 | 10,000 | 9,000 | 3,000 |
| Ambrose Channel (New York Harbor) | 40,000 | 40,000 | ..... | ..... |
| Bay Ridge and Red Hook Channels | 150,000 | 150,000 | 150,000 | 125,000 |
| Hudson River Channel | 450,000 | 450,000 | 150,000 | 100,000 |
| Bronx River | 250,000 | 250,000 | 200,000 | 100,000 |
| East Chester Creek | 6,000 | 6,000 | 10,000 | 5,000 |
| East River | 1,100,000 | 700,000 | ..... | ..... |
| Harlem River | 250,000 | 250,000 | 150,000 | 75,000 |
| Newtown Creek | 10,000 | 10,000 | 30,000 | 15,000 |
| Hudson River (Upper) | 1,970,000 | 1,250,000 | 3,260,000 | 877,783 |
| Total | 4,292,000 | 3,172,000 | 4,011,800 | 1,330,583 |

(The East River item was not recommended by the Chief of Engineers.)

In this connection I have examined the records for some time past, and find that heretofore the recommendations of the Army engineers have been substantially curtailed.

EAST RIVER PROJECT.

It is to be borne in mind that the principal navy yard of the United States is located on the East River, and that naval vessels recently constructed, in the course of construction, and authorized to be constructed have a draft of 31 feet, and vessels of that draft have been unable to enter or leave the navy yard except at high tide, which occurs for a period of about half an hour twice in each 24 hours—once in daytime and once at night—so that it has only been practicable to move one battleship each day in or out of the navy yard. Appreciating the fallacy of constructing additional dreadnaughts and superdreadnaughts when such a condition existed, your Representative deemed it essential that a provision should be incorporated in the bill authorizing the deepening of the East River channel to the navy yard, notwithstanding the fact that the committee had previously adopted a resolution not to include any new projects, and when voted down on his motion in the committee your Representative sought and received the personal aid of the President of the United States, who urged the committee's serious consideration of this improvement; and, after an all-day hearing on Lincoln's birthday, the committee adopted so much of the East River project as, by the removal of Diamond Reef off the Battery to a depth of 35 feet, at an expense of $700,000, will provide a channel with a minimum depth of 35 feet to the navy yard, which not only benefits the Navy, but commerce as well.

HUDSON RIVER SURVEY.

The city officials of New York recently celebrated the partial completion of the first of the new piers at Forty-fifth Street, where it is intended to accommodate the ocean liners which now dock at the Chelsea Piers. Before the new pier, when completed, and the others to be constructed, can, however, be utilized for the purpose intended it will be necessary to have a bar, over which there is now only about 22 feet of water, dredged to a depth of 40 feet. No step in that direction had been taken, so far as Congress is concerned, until the matter was brought to the attention of your Representative by Gen. Black, Chief of

Army Engineers; whereupon the following provision was incorporated in the river and harbor bill:

The Secretary of War is hereby authorized and directed to cause preliminary examination and survey to be made of New York Harbor, N. Y., with a view to securing an increase in depth up to 40 feet, and suitable widths in the North or Hudson River channel from deep water in the Upper Bay as far north as Spuyten Duyvil Creek.

HARLEM OR BRONX KILLS.

No action ever having been taken upon the survey of 1902, your Representative also had incorporated a provision authorizing a new survey, so as to emphasize the present importance thereof in relation to the operation of the State Barge Canal.

THE VISIT OF THE COMMITTEE TO NEW YORK.

The Committee on Rivers and Harbors consists of 21 members, and as a number of them have not visited New York in recent years, and some not at all, in order that they might gain a more thorough and personal knowledge of the port of New York and the necessities of Federal improvement, your Representative arranged early in August with the Chamber of Commerce and other civic bodies to invite the committee to visit New York and inspect the harbor, the Hudson, the Harlem, and East Rivers, which they spent two days in doing, and, at the invitation of the Albany Chamber of Commerce, continued on up to the State Barge Canal. There is no doubt that this visit will be productive of good results when the consideration of the next river and harbor bill is taken up in the second session of the present Congress, which will convene on the first Monday of December next.

GENERAL LEGISLATION.

At this session of Congress 17,798 bills have been introduced and referred to various committees and 285 laws have been enacted. It would, of course, exhaust your patience to refer to them at length, and it will only be my purpose to refer to the most important measures which have been adopted, and in the enactment of which your Representative was an active participant.

PREPAREDNESS.

Never before in the history of the Republic have the people of the United States been aroused to such a keen sense of danger from lack of preparedness as has resulted from the destruction and desolation of the European war, with its consequent and innumerable violations of the rights of neutral nations. The problem to determine the extent to which preparedness should be increased proved to be one most difficult of solution. The highest military and naval intelligence in the world has outlined the entire program, in the carrying out of which the Congress has appropriated for the various phases of our national defense during the present session, as follows:

| | |
|---|---|
| Army | $267,596,530 |
| Navy | 313,384,389 |
| Fortifications | 25,747,550 |
| Military Academy | 1,225,943 |
| Army and Navy (supplemental) | 34,523,000 |
| Nitrate plant | 20,000,000 |
| Total | 662,476,512 |

This total is by far in excess of any appropriation ever made by any Congress since the establishment of the Republic.

ARMY REORGANIZATION.

Just as the Wilson banking and currency law, enacted by the previous Congress, stabilized our financial institutions, and will prevent money panics in future, so the Army reorganization bill, approved on June 3, 1916, is intended to modernize our Military Establishment.

The Regular Army has been fixed at 296,461 men as a maximum basis and 215,838 men as a minimum basis, and the National Guard has been federalized—that is, placed under Federal control—and increased to 458,000 men. This means that hereafter the National Guard will be thoroughly equipped by the National Government and trained by Regular Army officers. While the writer preferred the continental army plan proposed by Former Secretary of War Garrison, the plan adopted is receiving a substantial test by the mobilization upon the Texas border, and can be improved as the necessities appear therein at the session next December.

The present law contains two important provisions which your Representative earnestly advocated, viz:

That after the expiration of one year's honorable service any enlisted man serving within the continental limits of the United States whose commander shall report him as proficient and sufficiently trained may, in the discretion of the Secretary of War, be furloughed to the Regular Army reserve—

And—

that no person under the age of 18 years shall be enlisted or mustered into the military service of the United States without the written consent of his parents or guardians.

The former will stimulate enlistments, and the large number of urgent applications for the discharge of minors which the writer has received from parents makes the latter a highly desirable provision. The bill will democratize the Army by giving an opportunity to young men to secure officers' commissions from civil life and to enter West Point from the ranks of the Regular Army, and extends the availability for service at the training camps, which upon their establishment was confined to a favored few.

ARMY APPROPRIATION BILL.

To the Army appropriation bill, approved August 29, 1916, your Representative offered an amendment for an appropriation of $14,000,000 for aviation, and upon the defeat thereof presented the matter to the President, following which the Senate incorporated in the bill an amendment which provides $13,281,666 for aeroplanes, and substantial appropriations for machine guns for the Regular Army and for the National Guard, field artillery and field-artillery ammunition for the National Guard, rifles and reserve small-arms ammunition, target-practice munitions, armored motor cars, and for many other important measures.

On July 7, 1916, your Representative introduced a bill authorizing the President to appoint a commission of not less than three civilian citizens, to hold office at the pleasure of the President, charged with the duty to inspect all foods supplied for the military forces of the United States, and to determine whether the quality of such foods conformed to the specifications of the purchase, and whether such foods were wholesome, suitable, and adequate, and to report thereon at reasonable intervals to the President with such recommendations as in their opinion might tend to improve the rations and promote the physical welfare of the Federal troops.

Senator CHAMBERLAIN also endeavored to secure consideration of this amendment in the Senate, but while the bill was not adopted, it no doubt had substantially the same effect, for the Secretary of War appointed Former Health Commissioner Darlington, of the city of New York, as a commissioner to visit the Texas border and make such an investigation as was contemplated by this law, and following Commissioner Darlington's investigation and the submission of his report there was a notable improvement and cessation of complaints.

FORTIFICATIONS BILL.

Notwithstanding the fact that the Chief of the Coast Artillery pronounced our seacoast defenses the best in the world, the present Congress has provided appropriations to extend them and increase their efficiency.

A special feature of the bill approved July 6, 1916, provides for having at hand and ready for use manifold and useful implements of industry, so that in case of war they can be furnished to private manufacturers, and insure the immediate availability of munitions of war not readily obtained.

A council of national defense has also been established for the purpose of coordinating our industries and resources for the national security and welfare.

MILITARY AND NAVAL ACADEMIES.

The number of cadets at West Point and Annapolis have been doubled.

NAVAL APPROPRIATION BILL.

By the enactment of the naval appropriation bill approved August 29, 1916, our Navy will be enlarged by the addition of 4 superdreadnaughts, 4 battle cruisers, 4 scout cruisers, 20 torpedo-boat destroyers, 3 fleet submarines, 27 coast submarines, 1 submarine with Neff propulsion, 1 fuel ship, 1 hospital ship, 1 ammunition ship, and 1 gunboat, making a total of 67 vessels. The law adopts a three-year building program of 157 vessels in 3 years, and when completed the United States will have 587 fighting ships in her Navy.

There are also provisions for aeroplanes for the Navy, ammunition, and smokeless powder to meet the necessary requirements of a first-class Navy. Twenty-three thousand and two hundred men have been added to the Navy, and 5,000 men have been added to the Marine Corps, with provision for ample reserves. This program will restore the Navy of the United States to the place among the world's navies which she proudly occupied until 1908.

The naval bill also provides for the promotion of officers by selection, which is the only way in which a nation can obtain the benefit of the ability of the best officers before they have reached a retiring age. Selection system is in operation in the other navies of the world and works satisfactorily.

Your Representative undertook to secure the inclusion of a provision in this bill authorizing the deepening of Hell Gate, East River, to 35 feet, the completion of which would provide a channel with a minimum depth of 35 feet from upper New

York Bay to Long Island Sound, thus making the East River a second Kiel Canal. It has been shown by Commander Jessup that eight battleships of a foreign fleet could successfully blockade New York while the ships of our Navy are able to leave only by the Sandy Hook route. The improvement of the Hell Gate Channel, thus opening up Long Island Sound as a rendezvous to our Navy, would require eight times as many ships to blockade the eastern end of Long Island Sound, the entrance to and exit from which is very much wider than the present available entrance.

When this bill came before the House it contained a provision authorizing the deepening of the channel approach to the navy yard, Charleston, S. C., upon which precedent your Representative prepared, and Senator O'GORMAN introduced a resolution appropriating $500,000 for the deepening of the Hell Gate Channel. The bill passed the Senate with this amendment included therein, but the provision was eliminated while the bill was in conference, notwithstanding the fact that your Representative enlisted the interest of the President of the United States, who wrote a forceful letter to the conferees, urging the grave necessity of retaining this appropriation. The foundation has, however, been laid to make certain the enactment of this measure in the next session.

PEACE COMMISSION.

The naval appropriation bill also contains a provision establishing a Peace Commission, which reads as follows:

It is hereby declared to be the policy of the United States to adjust and settle its international disputes through mediation or arbitration, to the end that war may be honorably avoided. It looks with apprehension and disfavor upon a general increase of armament throughout the world, but it realizes that no single nation can disarm, and that without a common agreement upon the subject every considerable power must maintain a relative standing in military strength.

In view of the premises, the President is authorized and requested to invite, at an appropriate time, not later than the close of the war in Europe, all the great Governments of the world to send representatives to a conference which shall be charged with the duty of formulating a plan for a court of arbitration or other tribunal, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament and submit their recommendations to their respective Governments for approval. The President is hereby authorized to appoint nine citizens of the United States who, in his judgment, shall be qualified for the mission by eminence in the law and by devotion to the cause of peace to be representatives of the United States in such a conference.

SHIPPING BILL.

The shipping bill, approved September 7, 1916, appropriates $50,000,000 and creates a Shipping Board of five commissioners each eventually to hold office for six years, at an annual salary of $7,500. They will have broad powers over shipping, similar to the powers exercised by the Interstate Commerce Commission over railroads. The Shipping Board will organize a corporation, the Government to purchase a majority of the stock for the purpose of acquiring and operating vessels in the merchant trade. The bill provides that this corporation shall be dissolved five years after the close of the European war, and if due encouragement is given there should be a proper and adequate merchant marine established by that time. This bill is the first step toward the establishment of a merchant fleet. Ships may be purchased of belligerent nations, but none shall be acquired that are not 75 per cent as efficient as when they came out of the yards. The right is reserved to the President to use the vessels purchased by the commission whenever an emergency requires. They will always be available as troop transports and auxiliary cruisers. This is where the United States Navy has been deficient in the past, as shown by the Spanish War. Transports are authorized by the naval bill, but, because of the fact that they are used so infrequently, Congress was not inclined to provide a sufficient number for maximum naval needs. The shipping bill meets the situation by establishing a fleet which will be used steadily in times of peace and be always available for war purposes.

CHILD-LABOR BILL.

The child-labor bill, approved September 1, 1916, provides that no goods, articles, or commodities manufactured in any mill, factory, or other industrial shop in which children under 16 years of age are employed shall be permitted to be used in interstate commerce. Thus the Federal Government will prevent the employment of children at a young and tender age in those fields of industry which will be injurious to their development and repressive in its effects upon their mental activities, grinding out the best that is in them.

KERN-M'GILLICUDDY BILL.

The Kern-McGillicuddy bill, approved September 7, 1916, provides for the compensation of all injured Federal employees at the rate of two-thirds of their wages if they are disabled; in case of death the dependent widow to be allowed 35 per cent of the employee's wage. Your Representative believes that the United States Government long ago should have enacted a pension or retirement law which would have increased the efficiency of the civil service and resulted in a saving of much money, and should follow the Kern-McGillicuddy law with this and other measures bringing the Government in line with modern progress.

THE PHILIPPINES BILL.

The Philippines bill, approved August 29, 1916, originally contained what was known as the Clarke amendment providing for the independence of the islands in not less than two years nor more than four years, for which 28 Democrats in the House, of which your Representative feels honored to have been one, secured the substitution of a declaration affirming the purpose of the United States to withdraw from the Philippines whenever a stable government has been established, and believes that not until a whole generation has been educated for self-government will it be possible to turn the Philippines loose without serious injustice to the natives themselves.

SUNDRY CIVIL APPROPRIATION BILL.

On the 21st day of April, 1916, your Representative introduced a bill for the improvement of East Potomac Park, Washington, D. C., as a national athletic field, in accordance with a comprehensive plan approved by the War Department. When the sundry civil appropriation bill, approved July 1, 1916, was reported to the House it contained a provision appropriating $15,000 for care and improvement of East Potomac Park and $50,000 for a field house to be erected therein, and an amendment offered by your Representative to increase this amount was lost by one vote, and the items as reported were adopted, thus insuring that the improvement proposed in the bill introduced by your Representative will be undertaken.

POST OFFICE APPROPRIATION BILL.

During the consideration of the Post Office appropriation bill, approved July 28, 1916, your Representative, collaborating with Representatives HENRY BRUCKNER and W. S. BENNET, of New York City, endeavored to secure the adoption of an amendment providing for the extension of the pneumatic-tube service from the post-office station at One hundred and twenty-fifth Street and Lexington Avenue under the Harlem River to the stations at One hundred and thirty-eighth Street and One hundred and forty-ninth Street in the Bronx, and from Harlem to Washington Heights. Upon the failure of this amendment we labored diligently, even if without success, with the Senate committee and the Postmaster General.

The parcel post was improved and extended and the Postal Savings System was greatly enlarged, and postal facilities made more efficient.

Your Representative also heartily cooperated with Representative GRIFFIN to secure favorable consideration of the Griffin superannuated employees' pension bill.

THE AGRICULTURAL APPROPRIATION BILL.

During the consideration of the Agricultural appropriation bill, approved August 11, 1916, your Representative vigorously opposed an amendment known as the standard grain-grading law, under which the farmer or shipper could have his grain graded and guaranteed under the supervision of the Government, upon the ground that the enactment of this law would be detrimental to the commerce of the port of New York.

THE RAILROAD STRIKE-PREVENTION LAW.

This bill, approved September 3, 1916, (a) establishes an eight-hour law; (b) provides for the appointment of a commission of observation, which is to make a report thereon; (c) pending the report of this commission the compensation of railway employees subject to the act shall not be reduced below the present standard day's wage, and that if necessary to work in excess of eight hours such employees shall be paid at a rate not less than the pro rata rate for such standard eight-hour workday; (d) provides penalties for violations of the bill.

It should not be forgotten by those who think that the granting of the eight-hour day is a blow to the sovereignty of the United States, that the Government itself established an eight-hour day without any compulsion or influence from organized labor.

THE REVENUE BILL.

Congress, in response to the public demand, has provided enormous appropriations. It was necessary to provide a means of raising revenue to meet the same. Your Representative believes in the equitable distribution of the means of payment for the cost of improvements of permanent character, so that they will be borne by those to be benefited. The construction of the Panama Canal, the cost of which was less than the increase of the appropriations made by this Congress, covers a period of 12 years. The Republican Party issued bonds to meet the yearly outlay. But when the Democratic Party gained control of Con-

gress, adopting a "pay-as-you-go" policy, the Panama Canal payments were made out of the current revenues, and now the last act of this Congress has been the revenue bill, approved September 8, 1916, by which more than $200,000,000 additional will be raised in order to meet the obligations which have been created by this Congress. But the bill contains so many other good features, that your Representative had no hesitancy in supporting it. There is, for instance, the antidumping clause, a provision increasing the tariff on dyestuffs, and the creation of a Tariff Commission, which will take the tariff out of politics; it repeals the obnoxious stamp taxes and increases the income tax on large fortunes, and provides for a progressive inheritance tax and a tax on war munitions. There is also a special provision which gives the President of the United States power to take retaliatory action against the interference of other nations with the commerce of the United States.

CONCLUSION.

It has always been my purpose to render the best service of which I was capable. At times the difficulties encountered in the performance of my official duties made the accomplishment of some things impossible and of others extremely uncertain; but whatever the result of my labors, I have always tried scrupulously, honestly, and patriotically to carve out for my district an enviable place upon the legislative map of the Nation. To the exalted office of Representative in Congress I have tried to bring a sense of devotion to duty, a singleness of purpose, a fervor of public spirit in every way worthy of its high dignity and character. In the performance of its functions and duties I have been inspired by a patriotic idealism, which, if I did not entirely attain, I labored faithfully and earnestly to fulfill.

I deeply appreciate, regardless of political affiliations, the support which I have received from the press of New York City.

The pleasure, the consummate personal satisfaction, I derived from the doing of the work has been very materially enhanced by the consciousness of the fact that that work, however imperfectly performed, was contributing in some slight degree to the good of the people, the honor of my city and State, and the glory of my country.

Respectfully,

MURRAY HULBERT,
*Member of Congress, Twenty-first District, New York.*

## The Eight-Hour Law, the Prevention of the Railroad Strike, and Democratic Legislation.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM L. IGOE.
OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 8, 1916.*

Mr. IGOE. Mr. Speaker, I voted for the eight-hour bill because I believe in the eight-hour day and because, under the circumstances, it was the wise, patriotic, and statesmanlike thing to do. The President and Congress have been bitterly assailed by the railroad owners and their supporters for this action, and in many instances the criticism has been violent and abusive.

The eight-hour day is right in principle, and its application, through this law, to workers engaged in the operation of trains is within the power to regulate commerce given to Congress under the Constitution. It is a principle which, as the President says, has the sanction of the favorable judgment of society.

What are the facts and circumstances which necessitated speedy legislative action? The railroad employees had demanded an eight-hour day with pro rata pay for overtime. The railroad managers refused to meet their demands. For months the parties had conferred, seeking to adjust their differences, but without success. They had reached a deadlock, and a strike of the 400,000 employees was threatened. At this point the President of the United States, realizing the disastrous results of such a strike, invited both sides to send representatives to Washington that he might make an effort to bring them to an agreement. The representatives of both sides did come to Washington, and after many conferences the President suggested that the eight-hour day be granted, that the question of increased pay for overtime be arbitrated, and an investigation made of the operation of the eight-hour day. The men finally agreed to accept this proposition, but the railroads declined, insisting that the entire matter should be arbitrated. The men then gave notice that on Monday, September 4, 1916, a strike would take place on all the railroad lines within the United States. The President then appeared before Congress on Wednesday, August 30, and, placing all the facts before us, suggested a program of legislation that would not only prevent the strike, but would likewise provide a permanent system of arbitration.

Only a few hours remained before the strike order would become effective, and, speedy action being necessary, Congress passed the law under discussion, embodying two of the President's recommendations, to wit, the eight-hour day with pro rata pay for overtime and a commission to observe the workings of the law for a period of about nine months, the rate of pay not to be changed during that time. It was known that if this legislation was passed before September 4 the strike order would be recalled and the country saved from the ruin and loss which would otherwise follow. In the face of these facts what was the duty of Congress? What was the duty of the President? For one I felt then, and still feel, that it was the duty of Congress to pass this law and prevent a strike. This was more than a controversy between the employees and the railroads, for the strike, if it took place, would have injuriously affected every citizen of the Nation; every business man and every laboring man would have immediately felt its effects. Millions of workmen would have been thrown out of employment, foodstuffs and supplies would have reached prohibitive prices, ruin and destruction would have resulted, and starvation and bankruptcy would have been the lot of many. As it was, as soon as the strike order was issued the price of foodstuffs in the cities jumped 25 per cent; employers of labor dependent on railroad transportation notified their men that if the strike took place they need not report for work; railroads gave notice that they would not haul perishable freight, which in the large part meant foodstuffs; and these same railroads began to hire strikebreakers and guards and firearms were secured to be used as occasion might demand.

With this situation confronting us, with the prospect of millions of our people out of employment, food beyond the reach of the poor man, cities deprived of supplies, ruin and starvation facing many, the President did his duty in calling upon Congress for legislation, and Congress did a sensible and patriotic thing in passing this eight-hour bill. The Republican candidate for President, Mr. Hughes, Republican leaders in Congress, and a Republican press have bitterly assailed and criticized us, but I believe the 100,000,000 people of the Nation, who would have had to bear the burden of a conflict in which they had no direct interest, will vindicate the judgment of the President and Congress.

An editorial in the St. Louis Post-Dispatch of September 8 presents the case so clearly that I attach it as part of my remarks. This editorial is entitled "Anything to beat Wilson," and is as follows:

At last the Republican Party has got an issue. It is the settlement of the strike. Following the vague hints of candidate Hughes, the Globe-Democrat shrieks about the cowardice of President Wilson and Congress in passing the Adamson bill. It raves about "compulsion," the sacrifice of the "dignity and honor of the Nation," the burial of the head of the American eagle in the sand, etc.

Nothing could be more absurd than the Globe-Democrat's assumption of compulsion to do this thing, regardless of right or wrong, except its amusing comparison of congressional action to avert a railroad strike with action to avert a strike of butchers or farmers. This is the finest sample of logic we have seen in a partisan newspaper.

However, we have not the slightest doubt if the butchers combined to deprive the people of the United States of meat or the farmers combined to deprive them of grain that Congress would act vigorously and effectively to keep the people from starving. If it didn't act, we would like to hear the Globe-Democrat shriek. It would be an experience. If the President had not acted in this case; if the strike had taken place, with an embargo on all traffic, the shrieks from the partisan organs and antilabor interests that are now howling about the cowardice of the President would have been deafening. In three days they would have wanted to mob the President and Congress for not taking action.

When the embargo was declared the railroads, whose heads realized that they could not run their roads with the strike on; the business men and business organizations who bombarded the President with telegrams urging him to support the railroads, flooded the President and the Congress with telegrams urging them to avert or postpone the strike. If the strike had occurred, the flood of telegrams calling for governmental action would have been a Niagara in a week.

Arbitration had failed, mediation had failed, and the strike had been ordered before the President went to Congress with a program of legislation to avert it and settle all railroad labor controversies. He went with the plan he had decided was just before the strike was ordered—the plan he had offered both parties to the controversy as just, which had been accepted by the men and rejected by the railroads.

After a strike like that with which the country was threatened has been averted it is easy to intimate that it would not have occurred or would not have amounted to much; it is easy when its disastrous consequences have been escaped to criticize the method of escape, to attack the men who took vigorous, swift action to save the public from the consequences. This is the easiest thing in the world.

Of course, President Wilson did an unpardonable thing from the standpoint of the old guard when he failed to humble himself before the railroad heads and do their bidding, when he failed to call in the Wall Street magnates and ask them to save the country at any price. He did an unpardonable thing when, recognizing Congress as the supreme power in the country, he called upon it to take action to save the country without the aid of the big interests.

In the Roosevelt panic of 1907, when stocks were crashing down, bankers were failing, and money was locked up in strong boxes, President Roosevelt turned over the Treasury to Pierpont Morgan and gave him a permit to violate the antitrust laws in order to save the country. He defended his surrender of the Government's power on the ground that it was necessary, and he boasted of it as an act of a man of courage and resource. Republican organs defended his action.

In the anthracite coal strike, after the country had suffered for five months and was in the throes of a coal famine, President Roosevelt intervened and forced a settlement. That was courageous and proper—he was a Republican President.

When President Wilson induces Congress to avert a strike threatening unparalleled national disaster by passing a just measure he is a coward who betrays the country—he is a Democrat.

The partisan organs and voters who are criticizing President Wilson evidently hoped for a national calamity. They resent its avoidance; out of calamity might come Republican success. Anything to beat Wilson.

It is not alone this piece of legislation that has caused the railroad and financial magnates to attack the Democratic Party. The favorites of Republican legislation are incensed at the whole program of Democratic legislation. The special interests are aroused and determined to drive the Democratic Party from power. The good old days are gone for the tariff barons and financial juggiers. In the good old days you could not begin to get the eight-hour bill considered in the House or Senate. It would have peacefully slumbered in committees appointed by Speaker CANNON or controlled by PENROSE or the late Senator Aldrich. The special interests have fallen upon evil times, but they are now aroused. The call to arms has been sounded. The forces of Wall Street, the tariff and trust barons, and railroad manipulators are gathering for the battle to recover their lost power. The contest this November is between these men and the people; between greed and privilege on the one hand, and democracy and justice on the other.

The record of legislation from March 4, 1913, to the close of this session of Congress is the greatest record of constructive and beneficial legislation ever enacted in the history of the country.

I wish to set out briefly some of the measures passed and some of the things done:

First. Revised the tariff by reducing the duties on necessaries and depriving monopoly of the special priveleges enjoyed under Republican tariffs. During its consideration the lobby which was so effective under Republican rule was exposed and driven from Washington.

Second. Provided that a considerable portion of the expenses of the Government should be raised from a tax on incomes, thus shifting the burden from those least able to pay to those best able to pay.

Third. Provided for an inheritance tax and a tax on munitions.

Fourth. Created the Federal Trade Commission, under which unfair methods of competition can be stopped and thus prevent the formation of trusts and monopolies. The commission will also aid and assist legitimate business through investigations at home and abroad.

Fifth. Revision of the antitrust laws. The Clayton bill supplements the Sherman law and is important to labor, in that it specifically says that labor is not a commodity, prevents the abuse of the writ of injunction in labor disputes, and provides for jury trials in certain contempt cases.

Sixth. Created a nonpartisan tariff commission to investigate and study trade and manufacturing conditions at home and abroad.

Seventh. Passed an antidumping law, under which it will be impossible for the foreign manufacturer to sell goods cheaper in the United States than at home.

Eighth. Passed preparedness measures, under which we will have an adequate and efficient Navy, a sufficient standing Army, with a great increase in the trained reserve, and the best coast fortification in the world. This administration has extended the navy-yard facilities for the building of naval vessels by the Government; increased the facilities for making its own powder, guns, and other war supplies; provided for a Government armor-plate plant and nitrate plant. By these measures it has taken a long step toward eliminating private profit in war supplies.

Ninth. Passed the shipping bill, under which the Government will purchase or construct ships and operate them, if necessary, in an effort to build up a merchant marine under the American flag. A Shipping Board is created, which will regulate water transportation and prevent discrimination and unfair practices.

Tenth. Passed the Federal reserve act, under which the control of the finances of the country was taken from Wall Street. Under this act financial panics are guarded against and the Government has control of the banks instead of the banks controlling the Government.

Eleventh. Passed a workmen's compensation law for all Federal employees injured or killed while in the service of the Government. This law is considered to be the most liberal law of its kind yet adopted, and I am proud of the fact that as a member of a subcommittee I assisted in perfecting the measure, and that it was on my motion that the bill was favorably reported to the House.

Twelfth. Passed the child-labor law, under which it will be impossible to ship in interstate commerce the products of factories or mines in which children under certain ages are employed.

Thirteenth. A law for the construction of Government-owned railroads in Alaska.

Fourteenth. A rural-credits law, under which farm-land loans may be secured at low rates of interest.

Fifteenth. A good-roads law, under which the Federal Government will cooperate with the States in building roads.

Sixteenth. The seamen's law, under which seamen are freed from what amounted to involuntary servitude. It also requires provision to be made for the safety of passengers on board while vessels are at sea.

Seventeenth. Law extending the operation of the parcel post.

Eighteenth. Provided for the extension of our export trade by investigating trade conditions abroad through specially appointed agents and by establishing branch offices of the Bureau of Foreign and Domestic Commerce in large trade cities, including St. Louis.

Nineteenth. The creation of the Board of Mediation and Conciliation, under which many great industrial and railroad strikes have been averted or settled satisfactorily to all parties involved.

Twentieth. It has passed an eight-hour law for women workers in the District of Columbia over which Congress has jurisdiction; prevented the use of the stop-watch system in Government arsenals and navy yards; it has put into effect the Children's Bureau law to promote the welfare of children.

These are some of the laws we have passed, and evidence the earnest desire of the Democratic Party to carry out its platform pledges. It is a record that should appeal to every citizen who believes in progressive policies and progressive legislation. It should receive, and I believe it will receive, the support and indorsement of the country.

O
